Willkommen to the Advanced Solid State Lasers Conference and Exhibition (ASSL)! We are excited to have you join us to share your latest research results, while hearing from your colleagues.

The ASSL Conference features a robust technical program with 33 invited speakers, more than 80 contributed talks and 3 poster sessions featuring 140 poster papers. The Plenary sessions feature Denis Balitsky from Cristal Laser in France, Roberto Osellame from Istituto di Fotonica e Nanotecnologie in Italy and Bedřich Rus from ELI Beamlines in Prague. In addition Holger Moench from Philips Photonics in Germany will join us at the banquet to present an entertaining talk about light in celebration of the International Year of Light.

ASSL is the only international event presenting materials, sources, and applications all in one meeting, in a single-track format. It builds on 30 years of the OSA-managed, former TSSL (1985-1989), ASSL (1990-2002), ASSP/AIOM/FILAS (2003-2012) meetings, including the last two years of the current-format, ASSL conference. The Materials program brings together international experts and researchers to review and discuss the advances in optics, materials science, condensed matter physics and chemistry relevant to the development, characterization and applications of new materials for lasers and photonics. The Sources program provides the world's premier forum for presenting advances in the source science and technology, aimed at some combination of improved power, efficiency and brightness, increased wavelength coverage, narrower and more stable frequencies and, for pulsed sources, shorter pulse widths. The Applications program connects the technical advances covered by Sources and Materials to applications of significance for attendees with prime interest in advancing the use, rather than the development of lasers and other coherent sources. Applications cover ways in which the advances in materials and sources highlighted by ASSL have an important impact on science and industry.

In addition to the technical program we have included various industry programs: an Industry Program Panel Discussion, an Industry Keynote presentation by Fredrich Dausinger the CEO of Dausinger + Giesen GmbH, a special workshop on how to communicate high tech for marketing and PR professional and the ASSL Exhibition. Be sure to spend time during the coffee breaks and lunch visiting and learning from the ASSL exhibitors as they represent all aspects of solid-state laser system design and implementation.

We all are very pleased to have you join this important yearly event and we look forward to a great meeting.

Thank you to all the
Advanced Solid State Lasers
Committee Members for contributing
many hours to maintain the high technical
quality standards of OSA meetings.

General Information

Registration

The registration desk is located in the *Foyer A*.

Sunday, 4 October	09:30—19:00
Monday, 5 October	07:00—18:00
Tuesday, 6 October	07:00—18:30
Wednesday, 7 October	07:30—18:00
Thursday, 8 October	07:30—14:00
Friday, 9 October	07:30—15:00

Exhibition

The Exhibition is located throughout the venue and is open to all registered attendees. Visit a diverse group of companies, representing all aspects of solid-state laser system design and implementation. Coffee breaks, lunches and poster sessions will be held in conjunction with the exhibition.

Monday, 5 October Exhibition & Coffee Break Exhibition & Lunch Exhibition & Coffee Break	10:05—10:30 12:30—14:00 16:00—16:30
Tuesday, 6 October Exhibition, Posters & Coffee Break Exhibition & Lunch Exhibition & Coffee Break	10:10—11:40 12:30—14:00 16:00—16:30
Wednesday, 7 October Exhibition & Coffee Break Exhibition & Lunch Exhibition & Coffee Break	09:45—10:15 12:20—13:50 15:45—16:15
Thursday, 8 October Exhibition & Coffee Break	10:10—11:40

Lunch

Lunches are included with the technical registration from Monday, 5 October— Wednesday, 7 October and will be held in conjunction with the exhibition. This is an excellent time to visit with participating companies and see the latest products and innovations. Additional lunch tickets are available for purchase at the registration desk for \$45 USD.

Access to the Wireless Internet

1. Select the Wireless Network "OSA"
 2. Enter the access code/password "ASSL2015"
 3. Begin surfing the web to any website
- The above access code and password are case sensitive.*

Online Access to Technical Digest

Full Technical Attendees have both EARLY and FREE continuous online access to the ASSL technical digest and Postdeadline papers through OSA Publishing's Digital Library. The presented papers can be downloaded individually or by downloading .zip files (.zip files are available for 60 days).

1. Visit the conference website at www.osa.org/ASSL.
2. Select the "Access digest papers" link on the right hand navigation.
3. Log in using your email address and password used for registration. You will be directed to the conference page where you will see the .zip file link at the top of this page.
[Note: if you are logged in successfully, you will see your name in the upper right-hand corner.]

Access is limited to Full Technical Attendees only. If you need assistance with your login information, please use the "forgot password" utility or "Contact Help" link.

Poster Presentation PDFs

Authors presenting posters have the option to submit the PDF of their poster, which will be attached to their papers in OSA Publishing's Digital Library. If submitted, poster PDFs will be available about two weeks after the meeting. While accessing the papers in OSA Publishing's Digital Library look for the multimedia symbol shown above.

About OSA Publishing's Digital Library

Registrants and current subscribers can access all of the meeting papers, posters and postdeadline papers on OSA Publishing's Digital Library. The OSA Publishing's Digital Library is a cutting-edge repository that contains OSA Publishing's content, including 16 flagship, partnered and co-published peer reviewed journals and 1 magazine. With more than 240,000 articles including papers from over 450 conferences, OSA Publishing's Digital Library is the largest peer-reviewed collection of optics and photonics.

Conference Program Update Sheet

All technical program changes will be communicated in the on-site Conference Program Update Sheet. All attendees receive this information with registration materials and we encourage you to review it carefully to stay informed to changes in the program.

Awards

OSA Foundation Travel Grant

In keeping with its mission to *promote the generation, application, archiving and worldwide dissemination of knowledge in optics and photonics*, The Optical Society (OSA) established the OSA Foundation in 2002 to carry out a wide range of charitable activities. The OSA Foundation benefits more than 7,000 people a year. The Foundation inspires future optics innovators, supports career development for optics students, recent graduates and young professionals, and recognizes distinguished achievement in the field through the presentation of awards and honors.

The OSA Foundation Student Travel Grant Program is designed to provide career development opportunities by assisting students who wish to attend conferences and meetings. The grants are given to students working or studying science in qualifying developing nations so they can attend OSA-managed technical meetings and conferences

We are pleased to announce The OSA Foundation Travel Grant recipient for
Advanced Solid State Lasers Conference
Konstantin Gorbachenya
Belarusian National Technical University, Belarus

IPG Student Paper Contest

IPG, ASSL's Premier Corporate Sponsor, provides funding for various paper presentation awards, which are determined by the General and Program Chair. All current students presenting a paper are eligible for these awards.

Lockheed Martin Student Paper Award

Lockheed Martin sponsors the Best Student Presentation Award. All papers presented by a current student are considered for this award.

Give the Gift of Light

Join the LIGHT BLOX Education Kit Challenge

► 1,500 kits distributed and counting

Short Courses

Short Courses cover a broad range of topic areas at a variety of educational levels. The courses are taught by highly regarded industry experts in a variety of specialties. Short Courses are an excellent opportunity to learn about new products, cutting-edge technology and vital information at the forefront of your field. They are designed to increase your knowledge of a specific subject while offering you the experience of knowledgeable teachers. **Separate registration is required to attend.**

Short Courses are complimentary for Student Technical attendees. To ensure admittance to your preferred course register as soon as possible. Space is limit and the complimentary seats will sell out.

SC290 High Power Fiber Lasers and Amplifiers

Johan Nilsson; *Univ. of Southampton, UK*
Sunday, 4 October, 10:00—13:00

Course Level: Advanced Beginner

Course Description: This course describes the principles and capabilities of high power fiber lasers and amplifiers, with output powers that can exceed a kilowatt. It describes the fundamentals of such devices and discusses current state of the art and research directions of this rapidly advancing field. Fiber technology, pump laser requirements and input coupling will be addressed. Rare-earth-doped fiber devices are the focus of the course, but Raman lasers and amplifiers will be considered, too, if time allows. This includes Yb-doped fibers at 1.0 - 1.1 μm , Er-doped fibers at 1.5 - 1.6 μm , and Tm-doped fibers at around 2 μm . Operating regimes extending from continuous-wave single-frequency to short pulses will be considered. Key equations will be introduced to find limits and identify critical parameters. For example, pump brightness is a critical parameter for some devices in some regimes but not always. Important limitations relate to non-linear and thermal effects, as well as damage, energy storage and, of course, materials. Methods to mitigate limitations in different operating regimes will be discussed. Fiber, laser and amplifiers designs for different operating regimes will be described.

Benefits and Learning Objectives

Describe the fundamentals of high power fiber lasers and amplifiers.

- List key strengths, relative merits, and specific capabilities of high power fiber lasers and amplifiers.
- Assess performance limitations and describe the underlying physical reasons in different operating regimes.
- Design or specify basic fiber properties for specific operating regimes.
- Describe the possibilities, limitations, and implications of current technology regarding core size and rare earth concentration of doped fibers.
- Discuss different options for suppressing detrimental nonlinearities.
- Design basic high power fiber lasers and amplifier systems.
- List strengths and weaknesses of different pumping schemes.

Intended Audience: This course is intended for scientists and engineers involved or interested in commercial and military high power fiber systems. This includes system designers, laser designers, fiber fabricators and users. A basic knowledge of fibers and lasers is needed.

SC426 Micro-structuring of Transparent Materials with Short and Ultra-short Laser Pulses

David Ashkenasi; *Technische Universität Berlin, Institut für Optik, Germany*
Sunday, 4 October, 10:00—13:00

Course Level: Advanced Beginner

Course Description: Goal of the course is to outline the principles in pulsed laser-interaction with transparent materials such as glass, quartz and sapphire. It will address the large variety of laser sources and processing schemes in laser micro machining of transparent work pieces. The structuring topics will cover several machining tasks such as precise cutting, drilling, bulk modifications, surface grooving and ripple formation. The course will concentrate on the influence of relevant laser parameters such as wavelength, pulse width, peak intensity and fluence that influence excitation and material reaction. Main intention of the course is to bridge between physical fundamentals and application-near innovation. In this context, one important aim of the course is to initiate a discussion in the audience, inquiring and comparing main advantages of different laser processing strategies in micro structuring of transparent materials.

Benefits and Learning Objectives

- Describe the fundamentals of laser-interaction with transparent materials.
- List key factors related to high peak power and non-linear optical effects.
- Discuss the influence of material properties, such as band width, impurities, thermal diffusion and mechanical strength.
- Assess processing limitations and describe the underlying physical reasons.
- Describe the possibilities, limitations, and implications of current and future technology for laser micro structuring of transparent materials.
- Compile and discuss several examples in laser micro structuring of different glass types, quartz and sapphire.

Intended Audience: This course is intended for scientists and engineers involved or interested in micro machining of glass and other optical materials. This includes students from applied science and universities, processing engineers, laser system designers, service and solution providers and end-users for fabrication. A basic knowledge of diode-pumped laser systems generating short or ultra-short laser pulses is of advantage.

Short Courses

SC419 Crystal Parametric Nonlinear Optics: Modelling, Materials and Devices

Benoit Boulanger; *Grenoble Univ., CNRS-NEEL Institute, France*

Sunday, 4 October, 14:00—18:00

Course level: Intermediate

Course Description: This lecture focuses on fundamental crystal parametric optics that is one of the most fascinating field of nonlinear optics involving corpuscular and wave aspects of light in strong interaction with the electrons of matter, and leading to optical frequency synthesis and mixing at the origin of numerous applications.

- Constitutive relations and Maxwell equations.
- Classification of the nonlinear interactions through the corpuscular approach: fusion and splitting involving three or four photons, spontaneous and stimulated processes.
- Calculation of the electric susceptibility by Lorentz model: perturbation approach leading to the definition of the different orders of the electric susceptibility, wavelength dispersion, intrinsic symmetries (Kleinman and ABDP), implications of spatial symmetry on the susceptibility tensors (Neumann principle).
- Tensor algebra and calculation of the first, second and third order polarizations.
- Modelling of the macroscopic nonlinearities of matter from the microscopic scale using the bond charge model and *ab initio* calculation, Miller index.
- Basics in linear crystal optics: propagation equation, index surface, birefringence, double refraction, eigenmodes.
- Amplitude equations in the nonlinear regime, Manley-Rowe relations.
- Calculation of the effective coefficient based on the field tensor formalism.
- Types and topology of collinear and non-collinear Birefringence Phase-matching and Quasi-Phase-Matching in bulk media and whispering-gallery-mode resonators.
- Conversion efficiency calculation of second harmonic generation (SHG), direct and cascaded third harmonic generation (THG), and optical parametric interactions: fluorescence, amplification (OPA), chirped pulse amplification (OPCPA), generation (OPG), oscillation (OPO).
- Angular, spectral and thermal acceptances.
- Techniques of characterization of nonlinear crystals for the determination of phase-matching and quasi-phase-matching loci, magnitude and relative signs of the nonlinear coefficients, acceptances.

Benefits and Learning Objectives

This new course aims at giving guidelines and tools for the design, characterization and use of crystals for parametric generation. This course should enable participants to:

- Explain the main lines and key parameters of fundamental crystal parametric optics.
- Compare the figures of merit of various nonlinear materials.
- Compute phase-matching directions, quasi-phase-matching periodicities, angular and spectral acceptances, effective coefficients, conversion efficiencies.
- Measure nonlinear coefficients, phase-matching directions, spectral and angular acceptances, a figure of merit, a conversion efficiency.
- Define the relevant parameters for the design of new nonlinear crystal.
- List the main nonlinear materials enabling parametric generation.
- Identify the right crystal corresponding to the targeted application.
- Design up-conversion and down-conversion parametric devices.

Intended Audience: This course is specifically built for physicists as well as chemists interested in crystal parametric optics: crystal growers and designers wanting to identify the relevant parameters, laser physicists aiming at working in nonlinear optics or users willing to go deeper in the field at the frontier of crystal physics, coming from industry or universities and other academic institutes. Various job levels are concerned: PhD students, postdocs, engineers, researchers, professors. The basics of electromagnetism, solid state and laser physics are recommended.

SC427 Frequency Combs and Applications

Ingmar Hartl; *DESY, Germany*

Sunday, 4 October, 14:00 —18:00

Course Level: Advanced Beginner

Course Description: At the beginning of this century frequency combs revolutionized optical frequency metrology by providing a direct link between optical and microwave oscillators, ultimately leading to the Nobel Prize of John Hall and Ted Hänsch. This course will give an introduction in optical frequency combs. The course focuses on modelocked-laser based comb sources, non-oscillator based combs will be discussed only briefly. First the basic principles of the frequency comb spectrum of a modelocked laser oscillator will be given. Different designs of frequency comb lasers, carrier-envelope offset frequency measurement, passive and active stabilization and feedback control techniques and noise considerations will be explained. Techniques to the extent of the spectral coverage beyond the gain spectrum of the laser medium will be described, including XUV and mid-infrared frequency comb sources. The second half of the course will focus on applications: Optical frequency measurement, optical clocks, astrocombs, distance-measurement, low-noise microwave generation, transfer of timing and frequency information in optical fibers, different methods of frequency comb spectroscopy, time-domain applications and others.

Benefits and Learning Objectives

- Explain frequency comb sources and frequency comb techniques.
- Construct a basic frequency comb laser with carrier-envelope-offset sensing and feedback control circuitry.
- Characterize noise properties of a frequency comb source.
- Become familiar with numerous applications of frequency combs
- Identify the important comb parameters for a specific application.

Intended Audience:

This course is intended for persons familiar with basic laser and ultrafast optics principles who intend to construct a frequency comb, characterize a frequency comb or use a frequency comb laser.

Special Events

Industry Workshop: How to Communicate HighTech to the Market: Marketing and PR Workshop for Scientists and Startups

Sunday, 4 October; 14:00—17:00
Fireplace Room

Winning customers for a new high-tech product is far from easy. But it has been done many times. This workshop gives hands-on advice for the communication of new technologies to prospective markets. Attendees will learn how to set up an efficient integrated communication strategy for a given technology or product and what they have to do to implement this strategy and to meet the respective targets. Two experts with a proven track record in the field share their experience and respond to the ever growing need to communicate complex technologies efficiently. **This workshop is complimentary but those interested in attending must register.**

Presenters:

Andreas Thoss, *Thoss Media GmbH, Germany*
Susanne Hellwage, *Hellwage Wissenschaftskommunikation, Germany*

Workshop Objectives

- Addressing industry: What is different?
- Selecting the right media: How to win your target audiences efficiently?
- Setting up a toolbox: Texts and channels for communication.
- Your company's website: Chance and challenge.
- Social media: What they can (can't) do.

Who Should Attend

- Scientists & engineers with interest in technology transfer
- Potential HighTech Startup founders
- PR people from scientific institutions
- PR and marketing people from high-tech industry

Welcome Refreshments

Sunday, 4 October, 19:00—20:00
Bistro Esswirtschaft, Rudower Chaussee 24 (across the street from the hall)

Join us for a welcome drink and light appetizers with your fellow colleagues to kick off the 2015 Advanced Solid State Laser Conference and Exhibition!

OSA CAM Lounge

OSA is turning 100 in 2016! We're asking all OSA members to be a part of our celebration by participating in short videos. CAM (Centennial Authentic Moments) is an ongoing program of collecting scientific selfies where members talk about what it means to be an OSA Member, how has OSA helped in their careers, what inspired them to get into the field of optics and what excites them about their current work in three minutes or less. The collection of these short videos will be featured on OSA's centennial website.

Special Events

Opening Remarks and Plenary Session

Monday, 5 October, 08:30—10:05

Bedřich Rus, ELI Beamlines Laser Systems, Czech Republic

Overview of ELI Beamlines Laser Systems: At the Frontier of Ultra-High-Power Lasers

Abstract: Overview of the laser systems being developed for ELI-Beamlines will be presented. The systems will provide high-repetition rate ultra-high-power PW and multi-PW pulses and will extensively employ the technology of diode-pumped solid state lasers (DPSSL).

Biography: Bedřich Rus is the chief laser scientist of the ELI-Beamlines project. He studied at the Czech Technical University in Prague and obtained his PhD in laser physics at the University Paris-South. He was working on plasma x-ray lasers where he developed devices providing strong amplification at 21.2 nm and demonstrated the first polarized x-ray laser. Between 1998 and 2007 he also worked on development of kJ laser technologies, adaptive optics and Ti:sapphire lasers. Since 2008 he has been involved in the ELI-Beamlines project where he leads the team developing diode-pumped laser systems, broadband amplifiers, pulse dispersion systems and laser diagnostics.

Denis V. Balitsky, CRISTAL LASER S.A., France

Growth of Large Scale Nonlinear LBO and Electro-optic RTP Crystals: State of the Art and Applications

Abstract: A new generation of high pulse power lasers needs optics with a large aperture and a high damage resistance for high efficient non-linear optics and for electro-optic Q-switching. Two of the most promising materials satisfying such applications are lithium triborate (LiB₃O₅ - LBO) and rubidium titanyl phosphate (RbTiOPO₄ - RTP). The step-by-step increasing of weight of crystals preserving high structural and optic homogeneity, high transmission and high damage resistance will be discussed. Regarding the production yield of large scale crystals it becomes a mass-production, because of development of green and UV lasers for medical and electronic applications as well as laser telemetry tools.

Biography: Denis V. Balitsky received a PhD degree at Moscow State University in 2000, and was appointed as Associate Professor at the University of Montpellier (France) in 2005. Currently he is a senior scientist in crystal growth at Cristal Laser SA in France. Balitsky is an expert in crystallography and crystal chemistry. He worked initially on the hydrothermal growth of several types of oxide materials for piezoelectric, optic and electro-optic applications. At Cristal Laser, Balitsky is more specifically involved in the development of large size non-linear and electro-optic materials for laser applications.

Poster Sessions

Monday, 5 October—Thursday, 8 October

Throughout the Venue

Posters are an integral part of the technical program and offer a unique opportunity where presenters can discuss their results one-to-one with interested parties. Each author is provided with a board to display the summary and results of his or her paper.

Monday, 5 October	18:30—20:00
Tuesday, 6 October	10:10—11:40
Thursday, 8 October	10:10—11:40

Poster Set-Up and Removal

All posters must be set by the start of the poster session. The presenter must remain in the vicinity of their poster for the duration of the session. All presenters must remove their posters at the conclusion of the session. Management will remove and discard any remaining posters after the time listed below.

Student Poster Session and Reception

Monday, 5 October, 18:30—20:00

Throughout the Venue

Sponsored by

Selected student presenters will be presenting their research during this poster session. All attendees are welcome to network with students and join the reception.

Special Events

Industry Panel Discussion: What are the Limitations of Technology?

Tuesday, 6 October, 11:30—12:30
Bunsen Hall (Bunsensaal)

Panelists from companies that represent the different types of lasers will discuss challenges and what the limits of their technology are.

Klaus Löffler, *Managing Director TRUMPF Laser und Systemtechnik GmbH, Germany*

Klaus Löffler's expertise in lasers extends from resonator design, excitation methods, beam delivery, sensor systems to laser material processing into Sales and Corporate Management. Since June 2014, he has been a member of the management board of the business field Lasertechnology at TRUMPF. Klaus started at TRUMPF in 1991 in the CO2 development department. He started the TRUMPF Laser Technology Center in Plymouth Michigan, USA in 1996. During this time, more than 500 TRUMPF lasers were implemented in North America. In 2002 he took over the position as manager of the joining group at Volkswagen Group, where he was responsible for the implementation of more than 500 High Power Lasers into production. In 2006 he served in different international sales responsibilities and in 2011 was promoted to the Head of International Sales for TRUMPF Laser. After serving in different responsibilities at the Laser Institute of America (LIA) he was elected in 2013 as the President of the LIA, where he is also a Fellow. He served on several advisory boards including BLZ Bavarian Laser Center, SAOT School of advanced optical technology, ZEMA Center for mechatronics Fraunhofer Institute for Machine Tools and Forming Technology, and Safety Network International.

Torsten Mans, *Managing Partner, Amphos, Germany*

Torsten Mans studied physics at RWTH Aachen and Manchester University. During his thesis he built the first ultrafast laser amplifier which utilizes the InnoSlab concept and obtained his PhD at Fraunhofer ILT / RWTH Aachen. He is co-founder and currently managing partner at Amphos GmbH.

Eric Mottay, *CEO, Amplitude Systems, France*

Eric Mottay is the president and CEO of Amplitude Systemes, France, a company he founded in 2001 and which is now a leader in diode-pumped ultrafast lasers. Eric graduated from the Ecole Supérieure d'Optique, Orsay, in 1985, and has since specialized in laser development and manufacturing. During his career, he developed and brought to the market numerous solid-state lasers, is the author of many scientific papers and holds several patents in the field.

Bojan Resan, *Advanced Technology Group Manager, JDSU Ultrafast Laser AG, Switzerland*

Bojan Resan received his BS in physics from University of Zagreb, Croatia; MS degree in photonics from ENSPS Strasbourg/Institute of Theoretical and Applied Optics Paris, France and his PhD in optics from College of Optics and Photonics/CREOL, Orlando, USA in 2004. Following CREOL, Bojan was with Coherent in Santa Clara, USA. In 2008, he joined Time-Bandwidth Products in Zurich, Switzerland, which was acquired by JDSU in 2014. He is currently managing Advanced Technology Group in JDSU Ultrafast Lasers, Zurich, and is also leading ultrafast laser development activities at University of Applied Sciences and Arts Northwestern Switzerland since 2015.

Industry Keynote: The History of Disk Lasers from the Perspective of a Contemporary Witness

Wednesday, 7 October; 10:15—11:15
Bunsen Hall (Bunsensaal)

Friedrich Dausinger, *CEO, Dausinger + Giesen GmbH, Germany*

Abstract: Since its invention in 1991 by Adolf Giesen the thin disk technology found numerous applications in industrial production processes and scientific applications by substituting rod and gas lasers and competing successfully with fiber lasers. The contribution will review the history of the disk laser from the early years of its invention to today's challenges as a promising tool for science.

Biography: Friedrich Dausinger is managing partner of Dausinger + Giesen GmbH, a company whose business model is to expand the application of thin disk technology in science and industry. He has about 35 years of experience with the application and development of high power lasers, and more than 20 years specially on disk lasers, in industrial (Bosch, Daimler, D+G) and academic (Stuttgart University) setting. He was chairman of national project initiatives in the field of ultrafast laser science, a Fellow of LIA (Laser Institute of America) and corresponding member of the Russian Academy of Engineering.

Special Events

Conference Banquet

Wednesday, 7 October; 19:30—22:00
InterContinental Hotel-Berlin
Budapester St. 2

Sponsored by

Buses will be provide from Foyer C at 18:15 to transport attendees from the conference location to the InterContinental Hotel.

Join your fellow attendees for a festive evening. Holger Moench, Manager of Technology & Strategy for Philips Photonic, will give a lively talk in celebration of the International Year of Light.

Light: A Light Dinner Talk

Holger Moench, Philips Photonics, Germany

Abstract: Electric lighting improved our vision of the world, the new applications of light in Datacom, sensing and manufacturing change the world. The frontiers of research have moved from brighter light sources to the smallest lasers integrated into objects of daily life.

Biography: Holger Moench joined Philips Research in 1991 after his Ph.D. in High Energy Physics at RWTH Aachen. He has been working on various high brightness and highly efficient light sources and their application in optical systems. He is now technology manager of Philips Photonics and his interests include the integration of semiconductors and optics, the design of advanced VCSEL structures and new applications for optoelectronic systems.

Postdeadline Papers Session

Thursday, 8 October, 11:40–12:50
Bunsen Hall (Bunsensaal)

The Technical Program Committee has accepted a limited number of postdeadline papers for oral presentations. The purpose of postdeadline papers is to give participants the opportunity to hear new and significant material in rapidly advancing areas. See page 46 for the Postdeadline Paper program.

The Postdeadline Papers can be found in OSA Publishing's Digital Library by visiting www.osa.org/ASSL and select "Access Digest Papers" link on the right hand navigation.

Plenary Session

Friday, 9 October, 08:00—08:40
Bunsen Hall (Bunsensaal)

Femtosecond-laser-based Microstructuring and Modification of Transparent Materials

Roberto Osellame, Istituto di Fotonica e Nanotecnologie (IFN) - CNR, Italy

Abstract: Femtosecond laser micromachining of transparent materials is a powerful tool in basic science and industrial applications. Its unique 3D capabilities and process versatility enables compact and effective device layouts for integrated photonics, microfluidics and nanotechnology.

Biography: Roberto Osellame received the Laurea Degree in Electronic Engineering from the Politecnico di Milano and his PhD in Physics from the Politecnico di Torino. Since 2001 he was a Staff Researcher of the Institute for Photonics and Nanotechnologies (IFN) of the Italian National Research Council (CNR), where he became Senior Researcher in 2007. He is also a Contract Professor of the Politecnico di Milano. Osellame has been one of the pioneers in femtosecond laser micromachining of transparent materials. His research activity includes the development of photonic circuits for quantum computing, the fabrication by two-photon-polymerization of micro/nano-structures of arbitrary geometry, and the integration of optical waveguides and microchannels for optofluidic lab-on-a-chip. He is co-author of more than 130 publications on ISI journals and holds 4 patents in the field of optics and photonics technology. He has been involved in several European projects and has been the Co-ordinator of FP7-STREP project 'microFLUID'.

Call for Papers

2015 Advanced Solid State Lasers Feature Issue in *Optics Express* and *Optical Materials Express*

Submission Deadline: 1 November 2015

- Invited talks, oral presentations, posters, post-deadline papers are all eligible
- Submissions will undergo peer review and should include substantial or significant new information when expanding the conference paper
- Benefit from the open-access and rapid-publication format of both *Optics Express* and *Optical Materials Express*

Lead Feature Editors

Katia Gallo, *KTH—Royal Institute of Technology, Sweden*

Optics Express Feature Editors

Yoonchan Jeong, *Seoul National University, South Korea*

F. Ömer Ilday, *Bilkent University, Turkey*

Optical Materials Express Feature Editors

Kenneth Schepler, *CREOL, University of Central Florida, USA*

Takunori Taira, *Institute for Molecular Science, Japan*

Shibin Jiang, *AdValue Photonics, Inc., USA*

For more information, visit the submission website

https://www.osapublishing.org/oe/journal/oe/feature_announce/asss2015.cfm

Buyers' Guide

A·P·E GmbH

Plauener Str. 163-165/Haus N
Berlin, 13053 Germany
P: +49.30.9860.1130
Email: sales@ape-berlin.de
URL: www.ape-berlin.de

A·P·E GmbH is a worldwide operating developer and manufacturer of instruments for the generation of ultrashort laser pulses with widely tunable wavelength as well as devices for pulse measurement and management. A·P·E's product portfolio ranges from auto-correlators to harmonic generators, from acousto-optics to synchronously pumped optical parametric oscillators (OPOs).

AdlOptica Optical Systems GmbH

Rudower Chaussee 29
Berlin, 12489 Germany
P: +49 30.5659.0888.0
Email: info@AdlOptica.com
URL: www.AdlOptica.com

AdlOptica GmbH develops and manufactures high efficient laser beam shaping optics for variety of scientific and industrial applications, customized industrial optics for high-power lasers and micromachining, special optics for geophysics researches, supplies interferometers for optical shop testing provides service of optical systems design.

AdValue Photonics, Inc.

3440 E. Britannia Drive #190
Tucson, AZ 85706 USA
P: +1 520.790.5468
Email: contact@advaluephotonics.com
URL: www.advaluephotonics.com

AdValue Photonics is a leading manufacturer of fiber lasers and amplifiers. We provide innovative and cost-effective products in the wavelength regions of 2 μm , 1.55 μm and 1 μm . We have special capabilities for high pulse energy, high peak power and narrow linewidth.

ALPhANOV

Institut d'optique d'Aquitaine
Rue François Mitterrand
Talence, 33400 France
P: +33 524.545.200
Email: info@alphanov.com
URL: www.alphanov.com/home

ALPhANOV offers multiple modes of action (collaborative projects, feasibility studies, shared technical facilities, products) with 4 fields of expertise: laser processes and micro-machining; laser sources and fiber components; laser and optical systems; and photonics and health.

Altechna

Mokslininku Str. 6A
Vilnius, 08412 Lithuania
P: +370.5.2725738
Email: info@altechna.com
URL: www.altechna.com

Altechna is a reliable supplier of custom and standard laser optics, polarization optics, laser and nonlinear crystals, lasers and laser accessories for manufacturers of femtosecond lasers, academic, and industrial customers. We are also a distributor of photonics products in local markets, R&D solutions, manufacturing of laser components and quality assurance.

American Elements

SPONSOR

1093 Broxton Avenue, Suite 2000
Los Angeles, CA 90024 USA
P: +1 310.208.0551
Email: customerservice@americanelements.com
URL: www.americanelements.com

American Elements' catalog of more than 15,000 products makes it the world's largest metals and chemical company devoted exclusively to advanced materials for the laboratory field. Our dedication to the highest possible quality control and lot-to-lot consistency is equally matched by our goal to be at the forefront of creating a sustainable planet that continually moves toward improving the human experience for all mankind.

Amplitude Technologies

2/4, Rue du Bois Chaland CE2926 Lisses
Evry Cedex 91029 France
P: +33 16911 2790
Email: info@amplitude-technologies.com
URL: www.amplitude-technologies.com

Amplitude Laser Group is composed of 3 brands : Amplitude Technologies, Amplitude Systèmes and Continuum. Amplitude Laser Group is the world leader in the development, manufacturing and commissioning of ultrafast high power laser solutions. Amplitude has been the pioneering laser company to industrialize femtosecond laser technology for both scientific and industrial applications. With a dedicated R&D in Yb-based diode-pumped technology, Ti:Sapphire-based ultra-intense systems and high pulsed energy Nd:YAG laser, Amplitude Laser Group is the unique company able to supply innovative laser solutions for today and tomorrow applications.

AMS Technologies AG

Fraunhoferstraße 22
Martinsried, 82152 Germany
P: +49 89.895770
Email: info@amstechnologies.com
URL: www.amstechnologies.com

AMS Technologies is a leading solution provider and distributor of high-tech, leading-edge components, systems and equipment, with more than 30 years of experience to date and currently serving more than 2000 European customers.

art photonics GmbH

Rudower Chaussee 46
Berlin, 12489 Germany
P: +49 0.30.6779.8870
Email: info@artphotonics.com
URL: www.artphotonics.com

art photonics is the world's leading manufacturer and supplier of specialty fiber cables, bundles and spectroscopy probes used in any range from UV to mid infrared: from 180nm to 18 μm , including high power laser cables for industrial and medical applications and unique mid-IR fiber optics.

ASLD GmbH

Helmut-Anzender Str.11
Erlangen, 91052 Germany
P: +49 13.1401.1880
Email: contact@asldweb.com
URL: www.asldweb.com

ASLD is a program which simulates solid-state laser resonators and amplifiers. Precise execution and speed, combined with user friendly features, distinguish ASLD's software package. It allows a design pump configuration and calculates stability, output power and beam quality of a laser resonator or an amplifier.

Buyers' Guide

Berlin Partner für Wirtschaft und Technologie GmbH

SPONSOR

Fasanen Str. 85
Berlin, 10623 Germany
P: +49 0.30.46302.500
Email: info@berlin-partner.de
URL: www.optik-bb.de

Berlin Partner for Business and Technology offers Business and technology promotion for companies, investors and science institutes in Berlin. With carefully tailored services and excellent links to research, our experts provide an outstanding range of offerings to help companies launch, innovate, expand and secure their economic future in Berlin.

CorActive High Tech

2700 Jean Perrin, Suite 121
Québec, QC G2C1S9 Canada
P: +1 418.845.2466
Email: sales@coractive.com
URL: www.coractive.com

CorActive manufactures specialty optical fibers for applications in the telecommunications, remote sensing, strategic defense, security, materials processing and medical industries.

Cristal Laser S.A.

Parc d'Activités du Breuil
32 Rue Robert Schuman
Messein, 54850 France
P: +33 3.83.47.01.01
Email: mail@cristal-laser.fr
URL: www.cristal-laser.com

25 years of experience, in 2015 we expanded our company, a leading manufacturer of non-linear crystals. Worldwide reputation, reliability of our products, technical innovation and responsiveness. More than 60 crystal growth stations. State-of-the-art fabrication department.

CryLaS GmbH

Ostend Str. 25
Berlin, 12459 Germany
P: +49 30.5304.2440
Email: sales@crylas.de
URL: www.crylas.de

CryLaS GmbH is a globally reckoned manufacturer of diode-pumped solid-state lasers. The product offering includes passively Q-switched pulsed microchip lasers from 213 to 1064 nm, and cw lasers at 266 nm for OEM integration and demanding scientific applications. Located in Berlin, Germany, CryLaS serves customers in more than 35 countries.

Crylaser, Inc.

B2 199, Western Rd., High Tech District Western Zone Chengdu, Sichuan 611731 China
P: +86 28.6634.8331
Email: sales@crylaser.com
URL: www.crylaser.com

Crylaser is one of the largest and most professional optical (laser) crystal manufacturers in China. Crylaser also repairs laser rods and other amplifying materials. After eight years of high speed development, Crylaser has successfully expanded to manufacturing NLO crystals and IR optics.

Crystalline Mirror Solutions GmbH

Seestadtstraße 27, Top 1.05
Vienna, 1220 Austria
P: +43 1.931.343255
Email: info@crystallinemirrors.com
URL: www.crystallinemirrors.com

CMS offers a groundbreaking coating technology. Our proprietary process enables the integration of single-crystal multilayers onto arbitrary (including curved) substrates, generating "Crystalline Supermirrors" with ultra-low Brownian noise, minimal (<100 ppm) optical losses in the mid-infrared, as well as a thermal conductivity 50x greater than dielectric mirrors.

Dausinger + Giesen GmbH

Rotebuehl Strasse 87
Stuttgart, 70178 Germany
P: +49 711.907060.0
Email: info@dausinger-giesen.de
URL: www.dausinger-giesen.de

Dausinger + Giesen GmbH utilizes disk laser technology for building systems with unprecedented flexibility. Variable pulse lengths from μ s to fs, pulse energies up to Joule and repetition rates up to MHz are being offered. The components, including disks and disk modules are also manufactured specifically for research and as OEM components.

DILAS Diodenlaser GmbH

Galileo Galilei Strasse 10
Mainz, 55129 Germany
P: +49.6131.9226.0
Email: sales@DILAS.com
URL: www.DILAS.com

DILAS manufactures high-power diode laser components and systems in a wide range of output powers and wavelengths including fiber-coupled, direct beam and integrated solutions.

EKSMA Optics

Mokslininku str. 11
Vilnius, LT-08412 Lithuania
P: +370.5.2729900
Email: info@eksmaoptics.com
URL: www.eksmaoptics.com

EKSMA Optics is a manufacturer of laser components for high power laser applications. We produce laser optics, laser and frequency conversion crystals for 193-20.000nm range, pockels cells and ultrafast pulse picking systems. The company owns IBS coating, optics and crystals polishing facilities, spherical and aspherical lens production and clean room facilities.

Electro-Optics Technology, Inc.

5835 Shugart Lane
Traverse City, MI 49684 USA
P: +1 231.668.9044
Email: sales@eotech.com
URL: www.eotech.com

EOT has been supplying enabling components and diagnostic equipment to manufacturers and users of high power laser systems since 1987. Current products include: Faraday rotators, optical isolators and fiber collimators for use with laser diodes, fiber lasers and solid-state lasers. EOT also stocks a complete line of photodetectors.

Buyers' Guide

EPIC - European Photonics Industry Consortium

SPONSOR

14 Rue de la Science
Brussels, 1040 Belgium
P: +32 4733.00433
Email: info@epic-asoc.com
URL: www.epic-assoc.com

EPIC is the industry association that promotes the sustainable development of organizations working in the field of photonics in Europe. We foster a vibrant photonics ecosystem by maintaining a strong network and acting as a catalyst and facilitator for technological and commercial advancement.

FCC Fibre Cable Connect GmbH

Max-Planck Str. 3
Berlin, 12489 Germany
P: +49 30.6392.6362
Email: info@fibrecableconnect.de
URL: www.fibrecableconnect.de

Fiber cables for laser beam delivery up to 1 kW for industrial and medical applications. Also fiber bundles, probes for spectroscopy and optical coupler. Range of services: complete solutions from design through a prototype to manufacturing, assembling of single- and multi-mode fibers and development of tailored customer specific solutions.

Fraunhofer Institute for Applied Optics and Precision Engineering IOF

Albert Einstein Str. 7
Jena, 07745 Germany
P: +49 3641 807.352
Email: +49 3641 807.604
URL: www.iof.fraunhofer.de

Optical fibers and waveguides are key components in innovative light sources which can provide extreme optical parameters. In the process, novel fiber designs matched to high-power components play a crucial role. Fraunhofer IOF is developing laser systems with varying wavelengths, operation regimes and power ratings up to the multi-kilowatt range.

Fraunhofer UK Research Ltd.

Technology and Innovation Centre, Level 5
99 George Street
Glasgow, G11RD UK
P: +44.141.5484667
Email: photonics@fraunhofer.co.uk
URL: www.fraunhofer.co.uk

Fraunhofer UK through its Centre for Applied Photonics offers industry a flexible applied R&D resource that responds to companies' needs in the development of photonic technologies. We help industry to develop products and processes for the future and engage in direct contact or collaborative projects for a range of applications.

Gooch & Housego

Dowlis Ford
Ilminster, TA19 0PF UK
P: +44 1460.256440
Email: sales@goochandhousego.com
URL: goochandhousego.com

Gooch & Housego is a global leaders in the design, engineering and manufacture of components for laser control based on acousto-optic and electro-optic technologies. From bases in the UK and USA, we supply our OEM customers with modulation, filter and pulse-picking and switching products.

IPG Photonics Corp.

PREMIER CORPORATE SPONSOR

World Headquarters
Oxford, MA 01540 USA
P: +1 508.373.1100
Email: sales.us@ipgphotonics.com
URL: www.ipgphotonics.com

IPG Photonics is the world leader in fiber lasers, diode lasers & fiber amplifiers operating at 0.5 – 2 microns. IPG's 1um and 1.5um fiber lasers & amplifiers in single-frequency and linearly-polarized variants provide products with the best available combination of performance, reliability & price. IPG's 2-5 um mid-IR lasers offer sensing, spectroscopy, material processing & medical applications.

IPG Laser GmbH

European Headquarters
Burbach, 57299 Germany
P: +49 2736 4420
Email: sales.europe@ipgphotonics.com
URL: www.ipgphotonics.com

Laservision GmbH & Co. KG

Siemens Str. 6
Fuerth, 90766 Bavaria, Germany
P: +49 0 9119.7368.100
Email: info@lv.com
URL: www.uvex-laservision.de

As one of the leading manufacturers of laser protection products, LASERVISION develops, manufactures, services and distributes CE certified laser safety goggles made of many different plastics and mineral glasses, as well as curtains, filters, windows and cabins. All eyewear and windows are certified according to EN 207/208.

neoLASE GmbH

Hollerithallee 17
Hannover, 30419 Germany
P: +49 511.515160.0
Email Address: info@neolase.com
URL: www.neolase.com

neoLASE is a solid state laser company focused on the development and manufacturing of industrial, high brilliance optical amplifiers, customized MOPA systems or fully integrated picosecond lasers.

Nuferm

7 Airport Park Rd.
East Granby, CT 06026 USA
P: +1 860.408.5000
Email: info@nuferm.com
URL: www.nuferm.com

Nuferm is a leading U.S. manufacturer of specialty optical fibers, precision wound optical fiber coils, fiber lasers and amplifiers. Our integrated team has the experience, resources and facilities required to design, manufacture, test and qualify highly-engineered optical fibers and fiber-based products for diverse applications and industries.

Buyers' Guide

NYFORS

Solkraftsvägen 12
Stockholm, SE-13570 Sweden
P: +46 87121021
Email: erik.bottcher@nyfors.se
URL: www.nyfors.com

NYFORS is an innovative supplier of advanced glass processing and optical fiber preparation equipment for high strength and specialty splicing operations. The portfolio covers CO₂ laser splicing and glass shaping equipment, automatic systems for fiber preparation and window stripping, high precision cleavers and optical fiber re-coaters, proof testers and interferometers.

The Optical Society (OSA)

2010 Massachusetts Avenue, NW
Washington, DC 20036 USA
P: +1 202.223.8130
Email: info@osa.com
URL: www.osa.org

Founded in 1916, The Optical Society (OSA) is the leading professional society for scientists, engineers, students and business leaders who fuel discoveries, shape real-world applications and accelerate achievements in the science of light. Through world-renowned publications, meetings and membership programs, OSA provides quality research, inspired interactions and dedicated resources.

Onefive GmbH

In Boeden 139
Zurich, 8046 Switzerland
P: +41 43.5383657
Email: contactus@onefive.com
URL: www.onefive.com

Onefive GmbH is a leading supplier of femtosecond, picosecond and nanosecond industrial laser modules. The company has a strong expertise in compact, maintenance-free, mode-locked lasers over a broad range of repetition rates, from pulse-on-demand up to 1.3 GHz. The areas of application range from material processing to medicine and microscopy.

Ophir Spiricon Europe GmbH

Guerickeweg 7
Darmstadt 64291 Germany
P: +49 6151 7080
Email: markus.revermann@eu.ophiropt.com
URL: www.ophiropt.com/laser-measurement

Wants to help you get full control over your laser. We provide Ophir laser power & energy meters, and Spiricon & Photon beam profilers. Measure from tens of pW to 100kW; from hundreds of nJ to tens of Joules; and from UV to IR and THz.

Oxide Corporation

1747-1, Makihara, Mukawa
Hokuto, Yamanashi 408-0302 Japan
P: +81 551.26.0022
Email: sales@opt-oxide.com
URL: www.opt-oxide.com

Oxide supplies high performance single crystal and original technology products: NLO crystals, such as CLBO, LBO, LBGO, etc.; TSAG, TGG and YIG for isolator materials; GSO and LGSO for scintillator; QPM devices including PPMgSLT/SLN and PPLBGO.

PicoQuant GmbH

Rudower Chaussee 29 (IGZ)
Berlin, 12489 Germany
P: +49 30.63926.929
Email: info@picoquant.com
URL: www.picoquant.com

PicoQuant GmbH is a research and development company in the field of optoelectronics. The company is a worldwide leader in the field of single photon counting applications. The product line includes pulsed diode lasers and LEDs, photon counting instrumentation, fluorescence lifetime spectrometers and time-resolved confocal microscopes.

RP Photonics Consulting GmbH

Wald Str. 17
Bad Dürrenheim, 78073 Germany
P: +49 7726.38922.60
Email: info@rp-photonics.com
URL: www.rp-photonics.com

RP Photonics Consulting GmbH offers technical consulting services and simulation and design software for the photonics industry and for scientific research.

Scientific Materials

31948 East Frontage Road
Bozeman, MT 59715 USA
P: +1 406.585.3772
URL: www.scientificmaterials.com

Hi-Purity Low-Loss laser materials: YAG, YAP, Ti:Sapp, YSO, gallium garnets, Cerium doped scintillators, passive q-switches and composite materials. High volume production or custom R&D manufacturing is available.

Southern Photonics

P.O. Box 1590
Shortland Street
Auckland, 1140 New Zealand
P: +64 21652465
Email: info@southernphotonics.com
URL: www.southernphotonics.com

Southern Photonics manufactures one micron wavelength femtosecond fiber laser systems at a range of powers and pulse repetition rates. These all PM lasers offer unprecedented stability and reliability and do not contain any saturable absorbers or free space optics.

Thales Optronique S.A.S.

SPONSOR
Avenue Gay-Lussac
Elancourt, Yvelines 78995 France
P: +33 130967477
Email: dominique.patte@fr.thalesgroup.com
URL: www.thalesgroup.com

For more than 30 years, Thales has been driving innovative solutions in order to design, develop and manufacture nanosecond lasers and high intensity, ultra-short pulse Ti:Sa laser systems. Hundreds of systems are already installed worldwide, including two PW lasers (BELLA (LBNL, USA) and CETAL (INFLPR, Romania).

Buyers' Guide

Trumpf Scientific Lasers GmbH + Co. KG

FeringasträÙe 10a
Unterföhring, 80939 Germany
P: +49 89 9622.888 0.950
Email: info@trumpf-scientific-lasers.com
URL: www.trumpf-scientific-lasers.com

TRUMPF Scientific Lasers is a joint venture between the TRUMPF group, world leader in machine tools and industrial lasers and Professor Ferenc Krausz, director of the Max-Planck-Institute of Quantum Optics. TRUMPF Scientific Lasers focuses on high-power, high-energy femtosecond and picosecond lasers. Base technology is the TRUMPF thin disk laser technology.

UltraFast Innovations

Am Coulombwall 1
Munich, 85748 Germany
P: +49 89.28914097
Email: info@ultrafast-innovations.com
URL: www.ultrafast-innovations.com

UltraFast Innovations provides customized premium ultrafast optics and devices. Many years of know-how in optics design and manufacturing allow us to implement latest research results into novel optics solutions. Our optics can be found in the laser sources of most major femtosecond OEM manufacturers.

UniLasers Ltd.

Unit 5, Bavelaw Business Centre
46A Bavelaw Road
Edinburgh, EH14 7AE UK
P: +44 0.3128.12778
Email: sales@uniklasers.com
URL: www.uniklasers.com

Our single frequency continuous wave lasers offer exceptional performance: free from mode hops during stable non-stop operation over hundreds of hours, extremely low noise and low power consumption. We design and manufacture CW single frequency lasers and any wavelength from NIR to UV.

Explanation of Session Codes

The first letter of the code designates the meeting. The second element denotes the day of the week (M= Monday, Tu=Tuesday, W=Wednesday, Th=Thursday, F=Friday). The third element indicates the session series in that day (for instance, 1 would denote the first sessions in that day). Each day begins with the letter A in the fourth element. The number on the end of the code (separated from the session code with a period) signals the position of the talk within the session (first, second, third, etc.). For example, a presentation coded AM2A.4 indicates that this paper is being presented on Monday(M) in the second series of sessions (2), and is the first session (A) and the fourth paper (4) presented in that session.

Online Access to Technical Digest and Postdeadline Papers Now Available!

Full Technical Attendees have both EARLY and FREE continuous access to the digest papers through Optics InfoBase. Go to www.osa.org/ASSL and select the "Access digest papers" link.

As access is limited to Full Technical Conference Attendees, you will be asked to validate your credentials by entering the same login email address and password provided during the Conference registration process. If you need assistance with your login information, please use the "forgot password" utility or "Contact Help" link.

Agenda of Sessions

Sunday, 4 October	
09:30—19:00	Registration, <i>Foyer A</i>
10:00—13:00	<div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> SC290 • High Power Fiber Lasers and Amplifiers </div> <div style="width: 45%;"> SC426 • Micro-structuring of Transparent Materials with Short and Ultra-short Laser Pulses </div> </div>
14:00—17:00	Industry Workshop: How to Communicate High Tech to the Market: Marketing and PR Workshop for Scientists and Startups
14:00—18:00	<div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> SC427 • Frequency Combs and Applications </div> <div style="width: 45%;"> SC419 • Crystal Parametric Nonlinear Optics: Modelling, Materials and Devices </div> </div>
19:00—20:00	Welcome Refreshments <i>Bistro Esswirtschaft, Rudower Chaussee 24 (across the street from the hall)</i>

Monday, 5 October	
07:00—18:00	Registration, <i>Foyer A</i>
08:30—10:05	AM1A • Opening Remarks and Plenary Session, <i>Bunsen Hall (Bunsensaal)</i>
10:05—10:30	Coffee Break and Exhibits <i>Throughout the Venue</i> <div style="float: right; border: 1px solid black; padding: 2px;"> <i>Coffee Break</i> Sponsored by  </div>
10:30—12:30	AM2A • Nonlinear Crystals, <i>Bunsen Hall (Bunsensaal)</i>
12:30—14:00	Lunch with the Exhibitors, <i>Throughout the Venue</i>
14:00—16:00	AM3A • Mid-Infrared Sources I, <i>Bunsen Hall (Bunsensaal)</i>
16:00—16:30	Coffee Break and Exhibits <i>Throughout the Venue</i> <div style="float: right; border: 1px solid black; padding: 2px;"> <i>Coffee Break</i> Sponsored by  </div>
16:30—18:30	AM4A • Fibers, <i>Bunsen Hall (Bunsensaal)</i>
18:30—20:00	AM5A • Student Poster Session and Student Receptions <i>Throughout the Venue</i> <div style="float: right; border: 1px solid black; padding: 2px;"> Student Reception Sponsored by  </div>

Agenda of Sessions

Thursday, 8 October	
07:30—14:00	Registration, <i>Foyer A</i>
08:00—10:10	ATH1A • Sensing, Spectrometry and Waveguiding, <i>Bunsen Hall (Bunsensaal)</i>
10:10—11:40	ATH2A • Poster Session III and Coffee Break with Exhibits Throughout the Venue <div style="float: right; border: 1px solid black; padding: 5px;"> Coffee Break Sponsored by  </div>
11:40—12:50	ATH3A • Postdeadline Papers Session, <i>Bunsen Hall (Bunsensaal)</i>
12:50—13:50	Lunch (<i>on your own</i>)
13:50—16:00	ATH4A • Frequency Combs and Modelocked Sources, <i>Bunsen Hall (Bunsensaal)</i>

Friday, 9 October	
07:30—15:00	Registration, <i>Foyer A</i>
08:00—10:00	AF1A • Applications & Sources Joint Session with Plenary Speaker <i>Bunsen Hall (Bunsensaal)</i>
10:00—10:30	Coffee Break, <i>Foyer C</i> <div style="float: right; border: 1px solid black; padding: 5px;"> Sponsored by  </div>
10:30—12:30	AF2A • Advanced ps, fs and MIR Processing, <i>Bunsen Hall (Bunsensaal)</i>
12:30—14:00	Lunch (<i>on your own</i>)
14:00—15:45	AF3A • Ultrafast Processing in the Electronics Industry, <i>Bunsen Hall (Bunsensaal)</i>

07:00—18:00 • Registration, Foyer A

08:30—10:05

AM1A • Opening Remarks and Plenary Session
Bunsen Hall (Bunsensaal)

AM1A.1 • 08:45

Overview of ELI Beamlines Laser Systems: At the Frontier of Ultra-High-Power Lasers, Bedrich Rus¹; ¹ELI-Beamlines, Czech Republic. Overview of the laser systems being developed for ELI-Beamlines will be presented. The systems will provide high-repetition rate ultra-high-power PW and multi-PW pulses and will extensively employ the technology of diode-pumped solid state lasers (DPSSL).

AM1A.2 • 09:25

Growth of Large Scale Nonlinear LBO and Electro-optic RTP Crystals: State of the Art and Applications, Denis Balitsky¹, Ph Villeval¹, D Lupinski¹; ¹Cristal Laser SA, France. A new generation of high pulse power lasers needs optics with a large aperture and a high damage resistance for high efficient non-linear optics and for electro-optic Q-switching. Two of the most promising materials satisfying such applications are lithium triborate (LiB₃O₅ - LBO) and rubidium titanyl phosphate (RbTiOPO₄ - RTP). The step-by-step increasing of weight of crystals preserving high structural and optic homogeneity, high transmission and high damage resistance will be discussed. Regarding the production yield of large scale crystals it becomes a mass-production, because of development of green and UV lasers for medical and electronic applications as well laser telemetry tools.

AM2A • Nonlinear Crystals
Bunsen Hall (Bunsensaal)

Presider: Katia Gallo, Royal Inst. of Tech. - KTH, Sweden

AM2A.1 • 10:30

Recent Study on Nonlinear Crystals, Ludmila I. Isaenko^{1,2}; ¹V.S. Sobolev Inst. of Geology and Mineralogy, Russia; ²Novosibirsk State Univ., Russia. The analysis of new promising wide-bandgap IR-nonlinear crystals based on ternary and quaternary (with Ge) chalcogenides is given. Crystal characteristics which determine the efficiency of nonlinear converters and the ways to improve them are discussed.

AM2A.2 • 10:50

New Nonlinear Optical Crystals for the Mid-Infrared, Peter G. Schunemann¹; ¹BAE Systems Inc, USA. Continued quality improvements in the birefringent crystals ZnGeP₂ and CdSiP₂, as well as all-epitaxial processing of orientation-patterned semiconductors GaAs (OP-GaAs) and GaP (OP-GaP), are extending efficient solid-state laser performance to the mid-infrared and beyond.

AM2A.3 • 11:10

Recent Theoretical Studies in Nonlinear Crystals: Towards the Design of New Materials, Valérie Vénier¹; ¹Laboratoire des Solides Irradiés, Ecole Polytechnique, CNRS, CEA-DSM, France. New development of theoretical and numerical approaches to describe the nonlinear optical properties of bulk materials and nanostructures will be presented. We will focus on systems interesting for their fundamental aspects and high technological impact.

AM2A.4 • 11:30

Angular noncritical phase-matched second harmonic generation in BaGa₄Se₇, Elodie Boursier¹, Patricia Segonds¹, A Jérôme Debray¹, Patricia Loren Inacio¹, Vladimir Panyutin², Valeriy Badikov³, Dmitrii Badikov³, Valentin Petrov², Benoit Boulanger¹; ¹Neel Inst., France; ²Max-Born-Inst. for Nonlinear Optics and Ultrafast Spectroscopy, Germany; ³High technologies Lab, Russia. We performed a complete study of angular noncritical phase-matched second harmonic generation in the monoclinic BaGa₄Se₇ (BGSe). We determined the corresponding wavelengths, conversion efficiencies and acceptances, as well as the involved nonlinear coefficients.

AM2A.5 • 11:42

Non-collinear phase-matched 355 nm UV generation in prism-coupled CsLiB₆O₁₀ crystal, Kentaro Ueda¹, Masashi Yoshimura¹, Chen Qu¹, Yoshinori Takahashi¹, Yusuke Mori¹; ¹Osaka Univ., Japan. A walk-off compensated prism-coupled device based on non-collinear phase-matching in CsLiB₆O₁₀ (CLBO) generates 2.55 W output of 355 nm UV light with 52.8% conversion efficiency from the geometric mean of input infrared and green powers.

AM2A.6 • 11:54

Non-walk-off second harmonic 532 nm generation by PP-LBGO at room temperature operation, Junji Hirohashi¹, Tetsuo Taniuchi², Koichi Imai¹, Yasunori Furukawa¹; ¹Oxide Corporation, Japan; ²FRIS, Tohoku Univ., Japan. Non-walk-off second harmonic 532nm generation were demonstrated at room temperature by PP-LBGO. More than 1.5 W of 532 nm were confirmed by PP-LBGO with wider temperature tolerances ($\Delta T(\text{FWHM})=24$ K-cm) based on nonlinear coefficients of d_{33} .

AM2A.7 • 12:06

Thermo-Optic Dispersion Formulas for YCOB and GdCOB Laser Host Crystals, Pavel Loiko¹, Xavier Mateos², Yicheng Wang³, Zhongben Pan⁴, Konstantin V. Yumashev¹, Huaijin Zhang⁵, Haohai Yu⁵, Uwe Griebner³, Valentin Petrov³; ¹Center for Optical Materials and Technologies, Belarusian National Technical Univ., Belarus; ²Física i Cristallografia de Materials i Nanomaterials (FICMA-FICNA), Universitat Rovira i Virgili (URV), Spain; ³Max Born Inst. for Nonlinear Optics and Short Pulse Spectroscopy, Germany; ⁴Inst. of Chemical Materials and Advanced Materials Center, China Academy of Engineering Physics, China; ⁵State Key Lab of Crystal Materials and Inst. of Crystal Materials, Shandong Univ., China. Anisotropy and dispersion of thermo-optic coefficients, dn/dT , and thermal coefficients of the optical path (TCOP) are studied for monoclinic oxoborate YCOB and GdCOB laser host crystals. Thermo-optic dispersion formulas are derived for these crystals.

AM2A.8 • 12:18

Laser-Induced Damage Study at 1.064 and 2.09 μm of High Optical Quality CdSiP₂ Crystal, Anne Dhollande¹, Christelle Kieleck¹, Georgi Marchev², Peter G. Schunemann³, Kevin T. Zawilski³, Valentin Petrov², Marc Eichhorn¹; ¹ISL, France; ²Max-Born-Inst., Germany; ³BAE Systems, USA. Recent advances in crystal growth and surface preparation result in an increased laser-induced damage threshold (LIDT) of CdSiP₂ (CSP) of 1.7 J/cm² at 2.09 μm (1 kHz) and 0.35 J/cm² at 1.064 μm (100 Hz).

14:00—16:00

AM3A • Mid-Infrared Sources I

Bunsen Hall (Bunsensaal)

Presider: Alphan Sennaroglu, Koc Univ., Turkey

AM3A.1 • 14:00

Invited

Multi-millijoule Few-Optical-Cycle Pulses in Mid-IR: Scaling Power, Energy and Wavelength, Audrius Pugzlys^{1,6}, V Shumakova¹, P Malevich¹, Tsuneto Kanai¹, S Alisauskas¹, Giedrius Andriukaitis¹, Edgar Kaksis¹, T Balciunas¹, Guangyu Fan¹, A Voronin², A M. Zheltikov^{2,3}, D Faccio⁴, D Kartashov⁵, Andrius Baltuska^{1,6}; ¹Photonics Inst. Vienna Univ. of Tech., Austria; ²International Laser Center, M.V. Lomonosov Moscow State Univ., Russia; ³Texas A&M Univ., USA; ⁴Heriot-Watt Univ., UK; ⁵Inst. for Optics and Quantum Electronics, Friedrich-Schiller Univ. Jena, Germany; ⁶Center for Physical Sciences & Tech., Lithuania. We discuss prospects of the generation of high power mid-IR pulses by analyzing soliton self-compression of multi-mJ 4- μ m pulses and the development of few-optical-cycle 6- μ m optical parametric amplifier. Scalability of pump lasers is addressed.

AM3A.2 • 14:20

Invited

High Energy Mid-IR OPCPA at 7 μ m with 2 μ m Pump, Jens Biegert^{1,2}, Daniel Sanchez¹, Michaël Hemmer⁴, Matthias Baudisch¹, Kevin T. Zawilski⁵, Peter G. Schunemann⁵, Olivier Chalus³, Christophe Simon-Boisson³, Heinar Hoogland⁶, Ronald Holzwarth⁶; ¹ICFO - The Inst. of Photonic Sciences, Spain; ²ICREA, Spain; ³Thales Optronique, France; ⁴CFEL, Germany; ⁵BAE Systems, USA; ⁶Menlo Systems, Germany. A novel class of high energy ultrafast OPCPA system at 7 μ m, pumped by an optically synchronized and Tm: fiber pumped 2 μ m picosecond Ho:YLF CPA system, delivers mJ-level pulses supporting a sub-4 optical cycle duration.

AM3A.3 • 14:40

Development of a high-power mid-IR parametric amplifier for multicolor driving of high harmonic generation, Tsuneto Kanai¹, Tadas Balciunas¹, Guangyu Fan¹, Edgar Kaksis¹, Giedrius Andriukaitis¹, Audrius Pugzlys¹, Andrius Baltuska¹; ¹Vienna Univ. of Tech., Austria. We developed a multicolour, high-peak-power mid-IR parametric amplifier with the base period corresponding to 3.1 μ m and a combined pulse energy >15 mJ, which is aimed at a "perfect wave" driver for high harmonic generation.

AM3A.4 • 14:52

Mid-Infrared Optical-Parametric Generation Pumped by Sub-Nanosecond Microchip Laser, Hideki Ishizuki¹, Takunori Taira¹; ¹Inst. for Molecular Science, Japan. We demonstrated single-pass MIR-OPG by microchip laser with sub-nanosecond duration. Effective single-pass OPG with 1mJ output energy using conventional PPMgLN could be realized. Broadband single-pass OPG could be also realized using chirped PPMgLN.

AM3A.5 • 15:04

Multiwavelength Ultrafast LiNbO₃ Raman Laser with Cascaded Terahertz-Wave Generation, Aravindan M. Warriar¹, Jipeng Lin¹, Helen M. Pask¹, Andrew Lee¹, David Spence¹; ¹Macquarie Univ., Australia. We demonstrate an ultrafast LiNbO₃ Raman laser to extend the wavelength versatility of a 1064 nm mode-locked laser. We generate new wavelengths in the infrared, as well as using polariton scattering to generate terahertz output.

AM3A.6 • 15:16

Invited

Advances in Mid-infrared Nanosecond OPOs Directly Pumped by Tm³⁺-doped and Tm³⁺,Ho³⁺-codoped Fiber Lasers, Christelle Kieleck¹, Brenda Donelan¹, Anne Dhollande¹, Christian Kneis¹, Martin Schellhorn¹, Marc Eichhorn¹; ¹Deutsch-Französisches Forschungs Inst, France. Recent work on Tm³⁺-doped and Tm³⁺,Ho³⁺-codoped 2 μ m fiber lasers and efficient pumping of mid-infrared nanosecond OPOs based on ZnGeP₂ or OP-GaAs non-linear crystals with watt-level output power is presented.

AM3A.7 • 15:36

Watt-level Megahertz-rate Femtosecond Mid-Infrared Source, Marcus Seidel¹, Xiao Xiao¹, Gunnar Arisholm², Alexander Hartung³, Oleg Pronin¹, Ferenc Krausz^{1,4}; ¹Max-Planck-Inst. of Quantum Optics, Germany; ²FFI (Norwegian Defence Research Establishment), Norway; ³Leibniz-Inst. of Photonic Tech. (IPHT), Germany; ⁴Ludwig-Maximilians-Universität, Germany. 0.9-W average power at 4.1- μ m wavelength is generated through optical parametric amplification in lithium niobate. The crystal is directly pumped by a mode-locked thin-disk oscillator and seeded with a continuum from an all-normal dispersion fiber.

AM3A.8 • 15:48

High-Power, Widely Tunable, Room-Temperature, Picosecond Optical Parametric Oscillator Based on Cylindrical MgO:PPLN, Suddapalli Chaitanya Kumar¹, J W. Wei¹, A Jérôme Debray², Vincent Kemlin³, Benoit Boulanger², Hishizuki⁴, Takunori Taira⁴, Majid Ebrahim-Zadeh^{1,5}; ¹ICFO - The Inst. of Photonic Sciences, Spain; ²Institut Néel Centre National de la Recherche Scientifique, Université Joseph Fourier, , France; ³Laboratoire d'Optique et Biosciences, Ecole Polytechnique, , France; ⁴Laser Research Center for Molecular Science, Inst. for Molecular Science, 38 Nishigonaka, Myodajiji, , Japan; ⁵Institucio Catalana de Recerca i Estudis Avancats (ICREA), Passeig Lluís Companys 23, , Spain. We report the first room-temperature synchronously-pumped picosecond OPO based on MgO:PPLN partial cylinder, providing broad and continuous tuning in the near-mid-IR with >4 W total average power, excellent output stability, and high beam quality.

AM4A.1 • 16:30

Invited

Challenges for Further Power Scaling of Single-Mode Fiber Lasers, Liang Dong¹, Fanting Kong¹, Guancheng Gu¹, Thomas Hawkins¹, Maxwell Jones¹, Joshua Parsons¹, Monica Kalichevsky-Dong¹, Kunimasa Saitoh², Benjamin Pulford³, Iyad Dajani³; ¹Clemson Univ., USA; ²Hokkaido Univ., Japan; ³Air Force Research Lab, USA. Further advances in mode control and mitigation of quantum defect heating are essential for further progress of single-mode fiber lasers. We will report on our recent works on advanced fibers, materials and fiber lasers.

AM4A.2 • 16:50

MCVD Based Fabrication of Low-NA Fibers for High Power Fiber Laser Application, Christian Hupel¹, Stefan Kuhn¹, Sigrun Hein¹, Nicoletta Haarlammert¹, Johannes Nold¹, Franz Beier^{1,2}, Bettina Sattler¹, Thomas Schreiber¹, Ramona Eberhardt¹, Andreas Tünnermann^{1,2}; ¹Fraunhofer IOF, Germany; ²Inst. of Applied Physics, Germany. The fabrication of Yb doped fibers with low-NA (0.04) for high-power fiber laser applications in the multi-kW class is presented and discussed. Laser tests with ~3 kW output power and excellent beam quality are demonstrated.

AM4A.3 • 17:02

Invited

Power Scaling Potential of Er-doped Fiber Lasers Based on Advanced Fiber Materials, Mark A. Dubinskii¹, E. Joseph Friebele², Shibin Jiang³, John Ballato⁴, Peter Dragic⁵; ¹US Army Research Lab, USA; ²Naval Research Lab, USA; ³AdValue Photonics, USA; ⁴Clemson University, USA; ⁵Univ. of Illinois at Urbana-Champaign, USA. Er-doped lasers are currently well behind Yb-doped in power scalability, which is due to critical spectroscopic differences between Er and Yb ions. We demonstrate several approaches to major improvement in Er-doped fiber laser power scaling based on recent advances in laser fiber material development.

AM4A.4 • 17:22

Cladding Pumped Single Crystal Yb:YAG Fiber Amplifier, Brandon Shaw¹, Charles Askins¹, Woohong Kim¹, Shyam Bayya¹, John Peele², Rajesh Thapa², Steve R. Bowman¹, Rafael R. Gattass¹, Jas S. Sanghera¹; ¹NRL, USA; ²Sotera Defense Solutions, USA. We report on fabrication and optical properties of double clad single crystal Yb:YAG core fiber. For the first time, net gain is demonstrated in a cladding pumped Yb:YAG single crystal fiber structure.

AM4A.5 • 17:34

All-Solution Doping Technique for Tailoring Core Composition toward Yb:AlPO₄:SiO₂, Stefan Kuhn¹, Sigrun Hein¹, Christian Hupel¹, Janka Ihring¹, Johannes Nold¹, Nicoletta Haarlammert¹, Thomas Schreiber¹, Ramona Eberhardt¹, Andreas Tünnermann^{1,2}; ¹Fraunhofer IOF, Germany; ²Inst. of Applied Physics, Friedrich-Schiller-Universität, Germany. A modified solution doping approach for incorporating appropriate amounts of Yb, Al and P in fused silica is shown. The mitigation of phosphorus evaporation is intended by the initial formation of AlPO₄ from solution.

AM4A.6 • 17:46

Invited

Microstructured Chalcogenide Glass Fibers, Johann Troles¹, Laurent Brilland²; ¹Univ. of Rennes 1, France; ²Perfos, France. Various chalcogenide microstructured optical fibers operating in the Mid-IR range have been elaborated in order to associate the high non-linear properties of these glasses and the original microstructured optical fibers properties.

AM4A.7 • 18:06

Invited

Deep-ultraviolet Light Generation in ZBLAN Photonic Crystal Fibre Pumped at 800 nm and 1042 nm, Xin Jiang¹, Nicolas Y. Joly¹, Fehim Babic¹, Rafal Sopalla¹, John C. Travers¹, Philip S. Russell¹; ¹Max-Planck-Inst. for the Science of Light, Germany. We report recent progress on the fabrication of photonic crystal fibre from ZBLAN glass and its application to generate deep-ultraviolet to mid-infrared supercontinua from short-pulse infrared pump lasers.

Notes

18:30—20:00
AM5A • Student Poster Session
Throughout the Venue

AM5A.1 • Experimental study of mixed-mode in laser-based optoelectronic oscillators based on van der Pol oscillators with intermediate frequencies, Alain Francis Talla¹, ¹Universite de Yaounde I, Cameroon. We investigate experimentally a novel optoelectronic oscillator based on the self-sustained oscillator that converts continuous light into stable and spectrally pure microwave in the intermediate frequency. The result presents the mixed-mode oscillations characterized by the laser injection current.

AM5A.2 • Laser Melting of Metal Powders Using Nd:Yag and Compact Diode Laser for Micro Particle Deposition, Mohammad Hossein Azhdast^{3,1}, Oliver Lux¹, Haro Fritsche^{2,1}, Hans J. Eichler¹, Ghassem Azdash³, Heinrich Lüdeke³, Veronika Glaw⁴, Klaus-Dieter Lang¹; ¹Technical Univ. of Berlin, Germany; ²DirectPhotonics Industries GmbH, Germany; ³PacTech, Germany; ⁴Fraunhofer, Germany. Laser melting of different metal powders is investigated using a Nd:YAG laser system and a compact diode laser. The influence of various process parameters on the physical properties of the molten particles is studied.

AM5A.3 • Nano particle production by laser ablation and metal sputtering on Si-Wafer substrate, Mohammad Hossein Azhdast^{3,1,2}, Ghassem Azdash¹, Heinrich Lüdeke¹, Veronika Glaw³, Klaus-Dieter Lang²; ¹PacTech, Germany; ²Technical Univ. of Berlin, Germany; ³Fraunhofer, Germany. This research relates to methods of deposition and patterning a surface with nano sputtered particles by Laser. The method is mask-less and without vacuum requirement which can be used in wire bonding and microelectronics devices.

AM5A.4 • Exploring Air Breakdown Threshold and Temporal Dynamics by a Q-switched Mode-locked Nd:YAG Laser in a Statistical Approach, P. H. Tuan¹, C. Y. Cho¹, C. H. Wu¹, J. C. Tung¹, Kuan-Wei Su¹, Yung-Fu Chen¹; ¹National Chiao Tung Univ., Taiwan. A Q-switched mode-locked Nd:YAG laser is utilized to explore air breakdown threshold in a statistical approach to be 0.64 TW/cm². The temporal dynamics of induced plasma shows a sub-nanosecond delay to the incident Q-switched pulse.

AM5A.5 • High-peak-power Optically-pumped AlGaInAs Eye-safe Laser with a Sandwiched Gain Chip Structure and a Silicon Wafer Output Coupler to Form a Compact Cavity, P. H. Tuan¹, C. Y. Cho¹, Chi-Ping Wen¹, Hsing-Chih Liang², Kuan-Wei Su¹, Kai-Feng Huang¹, Yung-Fu Chen¹; ¹National Chiao Tung Univ., Taiwan; ²National Taiwan Ocean Univ., Taiwan. An intrinsic silicon wafer is exploited as an output-coupler to develop a high-peak-power optically-pumped AlGaInAs laser at 1.52 μm. The gain chip is sandwiched between diamond heat-spreaders and Si-wafer to form a compactly stack cavity.

AM5A.6 • Design of a solid state laser for low noise upconversion detection of near infrared light, Lasse Høgstedt¹, Peter Tidemand-Lichtenberg¹, Christian Pedersen¹; ¹Technical Univ. of Denmark, Denmark. To maximize signal-to-noise ratio for upconversion of near-infrared light we show that the mixing intensity should be 3 GW/m². With emphasis on the noise contribution from random duty-cycle errors the optimum design parameters is discussed.

AM5A.7 • Self-frequency Doubling of Electric Field Periodically Poling Nd³⁺ and Mg²⁺ Co-doped Lithium Niobate, Dongzhou Wang^{1,2}, Yong Bi², Hong Liu¹; ¹Shandong Univ., China; ²Technical Inst. of Physics and Chemistry, Chinese Academy of Sciences, China. Periodically poled Nd:Mg:LiNbO₃ (PPNdMgLN) was achieved by an electric-field poling method. 80 mW green laser emitting at 542 nm was obtained by self-frequency doubling in a 16 mm long PPNdMgLN.

AM5A.8 • Anisotropy of Bulk Degradation of LBO Crystal Induced by DUV Laser Radiation at 266 nm, Dmitry Nikitin^{1,2}, Oleg Verzhinin², Valentin Tyrtshnyy², Oleg Byalkovskiy^{2,1}; ¹MIPT, Russia; ²NTO "IRE-Polus", Russia. Dependence of degradation time of LBO crystal on UV propagation direction, polarization and power was investigated at different crystal temperatures. Anisotropy of bulk degradation induced by DUV radiation at 266 nm was observed.

AM5A.9 • Studies about relationships between the symmetries of ferroelectric crystal and frequency-doubled patterns, Tianxiang Xu¹, Dazhi Lu¹, Haohai Yu¹, Huaijin Zhang¹, Jiyang Wang¹; ¹Shandong Univ., China. The broadband quasi-phase-matching process in Ca_{0.28}Ba_{0.72}Nb₂O₆ was demonstrated and the relationships between crystal symmetries and second-harmonic patterns were studied. Considering the light-matter interaction, the frequency-doubled photons were found to be trapped by a centripetal force.

AM5A.10 • M-lines characterization of the refractive index of GaSb and Al_xGa_{1-x}AsSb lattice-matched onto GaSb in the mid-infrared, Sophie Roux¹, Pierre Barrault², Olivier Lartigue², Laurent Cerutti^{3,4}, Eric Tournié^{3,4}, Bruno Gérard⁵, Arnaud Grisard¹; ¹Thales Research & Technology, France; ²CEA-LETI, France; ³Université de Montpellier, France; ⁴CNRS, UMR 5214, IES, France; ⁵III-V Lab, France. We have performed M-lines measurements of GaSb and Al_xGa_{1-x}AsSb refractive index in the 2.15–7.35 μm range and established the variation laws versus wavelength and aluminum fraction. These laws are in good agreement with the single-oscillator-model.

AM5A.11 • Ultraviolet laser-induced degradation of CsLiB₃O₁₀, Masashi Yoshimura^{1,2}, Yuichi Oeki¹, Yoshinori Takahashi^{1,2}, Hiroaki Adachi^{1,2}, Yusuke Mori^{1,2}; ¹Osaka Univ., Japan; ²SOSHO Inc., Japan. We measured the correlation between the brightness of green light scattering in CLBO and the 266 nm UV lifetimes. A continuous reciprocal motion of CLBO shows drastic improvement of UV-induced degradation resistance.

AM5A.12 • WITHDRAWN

AM5A.13 • Growth and optical characterization of Ho³⁺/Yb³⁺-codoped PbF₂ single crystal, Peixiong Zhang¹, Baitao Zhang², Lianhan Zhang¹, Jiaqi Hong¹, Jinglian He², Yin Hang¹; ¹Shanghai Inst of Optics & Fine Mechanics, China; ²State Key Lab of Crystal Materials, Shandong Univ., Jinan 250100, China, China. An enhanced 2.86 μm emission was observed for the first time in a novel Ho³⁺/Yb³⁺ codoped PbF₂ crystal under 970 nm LD pump, which may be a promising material for 2.86 μm laser applications.

AM5A.14 • Er:KY(WO₄)₂ and Er:LiYF₄ Crystals for Eye-Safe In-Band Pumped Lasers, Konstantin Gorbachena¹, Viktor E. Kisel¹, Sergey V. Kurilchik¹, Anatol S. Yasukevich¹, Stella Korableva², Vadim V. Semashko², Anatoliy A. Pavlyuk³, Nikolai V. Kuleshov¹; ¹Center for optical materials and technol, Belarus; ²Kazan Federal Univ., Russia; ³Nikolaev Inst. for Inorganic Chemistry, Siberian Branch of Russian Academy of Sciences, Russia. Laser operation of in-band pumped Er:KY(WO₄)₂ and, for the first time to our knowledge, Er:LiYF₄ crystals was demonstrated. The maximal slope efficiencies of 40% and 21% were obtained for Er:KY(WO₄)₂ and Er:LiYF₄ crystals, respectively.

AM5A.15 • Energy Transfer Parameters and Microchip Diode-Pumped CW Laser Performance of Tm,Ho:KYW Crystal, Natali Gusakova^{1,3}, Sergei V. Kurilchik^{1,3}, Maxim Demesh^{1,3}, Anatol S. Yasukevich^{1,3}, Viktor E. Kisel^{1,3}, Anatoliy A. Pavlyuk², Nikolai V. Kuleshov^{1,3}; ¹BNTU, Belarus; ²Inst. of Inorganic Chemistry, Russia; ³Center OMT, Belarus. Energy transfer parameters of Tm(5at.%),Ho(0.4at.%):KYW single crystal were investigated. A diode-pumped CW Tm,Ho:KYW microchip laser was realized. Maximum output power of 77 mW at 2070 nm was achieved in the fundamental TEM₀₀ mode.

AM5A.16 • Investigations on Yb³⁺:ScBO₃ - a novel laser crystal in rare-earth ions doped orthoborate systems, Dazhi Lu¹, Tianxiang Xu¹, Zhongben Pan², Haohai Yu¹, Huaijin Zhang¹, Jiyang Wang¹; ¹Shandong Univ., China; ²Inst. of Chemical Materials and Advanced Materials Research Center, China Academy of Engineering Physics, China. Optical-quality Yb³⁺:ScBO₃ crystal has been grown by the Czochralski method. The thermal and spectral properties were studied. The continuous-wave Yb³⁺:ScBO₃ crystal laser has been demonstrated which indicates its promising utilization in moderate-power lasers.

AM5A.17 • The Concentration Effect on Spectroscopic Properties of Er:CaF₂ crystals, Weiwei Ma^{1,2}, Liangbi Su¹, Jingya Wang¹, Dapeng Jiang¹, Xiaodong Xu¹, Jun Xu³, ¹Shanghai Inst. of Ceramics, Chinese Academy of Sciences, China; ²Univ. of Chinese Academy of Sciences, China; ³Inst. for Advanced Study, Tongji Univ., China. The concentration effect on spectroscopic properties of Er:CaF₂ crystals was investigated. Lifetime of ⁴I_{13/2} decayed faster than ⁴I_{11/2}. 8at.%Er:CaF₂ had the highest absorption and emission cross-section and a relatively favorable lifetime for 2.73μm emission.

AM5A.18 • High gain low temperature active mirror Yb:YAG laser amplifier qualification, Samuel Marrazzo¹, Thierry Gonçalves-Novo¹, Bernard Vincent¹, Jean-Christophe Chanteloup¹; ¹Laboratoire LULI, USA. Gains as high as 20 for a 77mm ceramic Yb:YAG disks are recorded in the 80–200K temperature range on a laser amplifier cooled through a static low pressure helium gas cell operated in the 1 to 10 Hz regime.

AM5A.19 • Thermally Induced Distortions of the Temporal Phase Of Optical Pulses In Phosphorous-doped Silica Fibers, Yutong Feng¹, Betty Meng Zhang¹, Achar Harish¹, Johan Nilsson¹; ¹Univ. of Southampton, UK. We study the phase distortion induced in optical pulses due to thermal effects in Sm doped silica fibers. We experimentally measure the phase change accurately using an interferometric technique.

AM5A.20 • Fiber Absorption Measurement Errors Resulting from Re-emission of Radiation, Betty M. Zhang^{1,2}, Junqing Zhao¹, Yutong Feng¹, Sheng Zhu¹, Jonathan H. Price¹, Johan Nilsson¹; ¹Optoelectronics Research Centre, Univ. of Southampton, UK; ²School of Electrical and Electronic Engineering, Nanyang Technological Univ., Singapore. We show that errors in the absorption measured in rare-earth-doped fibers can exceed 50% and severely distort the spectral shape. This is a result of re-emission in fibers with overlapping absorption and emission spectra.

AM5A.21 • Cavity-dumped mode-locked picosecond Nd:GdVO₄ oscillator, Peng Gao³, Jie Guo¹, Jinfeng Li¹, Xiaoyan Liang^{1,2}; ¹Shanghai Inst of Optics & Fine Mechanics, China; ²Shanghai Tech Univ., China; ³Shanghai Inst of Optics & Fine Mechanics, China. We report on a passively mode-locked solid-state picosecond Nd:GdVO₄ oscillator with cavity-dumping. Pulse energies of 8 uJ and 16.7 uJ with sub-10 ps have been achieved at 1 MHz and 300 kHz, respectively.

AM5A.22 • 1.94 GHz CW Modelocked Ytterbium-Doped Bismuthate Glass Waveguide Laser, Adam Lancaster¹, Amol Choudhary^{2,3}, Jha S. Nitin¹, Rose Mary¹, David P. Shepherd², Ajoy K. Kar¹; ¹Inst. of Photonics and Quantum Sciences, Heriot-Watt Univ., UK; ²Optoelectronics Research Centre, Univ. of Southampton, UK; ³School of Physics, Univ. of Sydney, Austria. A 1.94 GHz CW modelocked ytterbium-doped bismuthate waveguide laser is presented. The waveguide was fabricated using the ultrafast laser inscription technique. Pulse energy of 30.9 pJ and pulse duration of 1.1 ps are inferred from the spectral width.

AM5A.23 • Sub-40-fs pulses generated from a diode-pumped Kerr-lens mode-locked Yb:YCOB laser, Ziye Gao¹, Jiangfeng Zhu¹, Ke Wang¹, Junli Wang¹, Zhaohua Wang², Zhiyi Wei², Haohai Yu³, Huajin Zhang³, Jiyang Wang³; ¹Xidian Univ., China; ²Beijing National Lab for Condensed Matter Physics, Chinese Academy of Sciences Inst. of Physics, China; ³Shandong Univ., China. We demonstrate a diode-pumped Kerr-lens mode-locked Yb:Ca₂YO(BO₃)₃ laser, generating sub-40 fs pulses directly from the oscillator without extracavity compression. The laser is centered at 1049-nm with 35-nm bandwidth and delivers 53-mW average output power.

AM5A.24 • Graphene Mode-Locked Femtosecond Cr:LiSAF Laser, Ferda Canbaz¹, Nurbek Kakenov², Coskun Kocabas², Umit Demirbas³, Alphan Sennaroglu¹; ¹Koç Univ., Turkey; ²Bilkent Univ., Turkey; ³Antalya International Univ., Turkey. We report the first demonstration of femtosecond pulse generation from a Cr:LiSAF laser mode-locked with a monolayer graphene saturable absorber. Nearly transform-limited 72-fs pulses were generated at 850 nm with only two 135-mW pump diodes.

AM5A.25 • Kerr-lens mode-locked Yb³⁺:CaYAlO₄ laser and octave-spanning supercontinuum generation, Zijiao Yu¹, Hainian Han¹, Jinwei Zhang¹, Lei Hou¹, Yang Xie², Zhiyi Wei¹; ¹Inst. of Physics, CAS, China; ²School of Physics and Optoelectronics Engineering, Xidian Univ., China. We reported a stable Kerr-lens mode-locked Yb³⁺:CaYAlO₄ oscillator. The shortest pulse duration was measured to be 57fs and the maximum mode-locked power was more than 1W. An octave-spanning supercontinuum in a PCF was also generated.

AM5A.26 • High power dual-wavelength Kerr-lens mode-locked Yb:YAG thin disk laser, Yingnan Peng¹, Jinwei Zhang², Dehua Li², Zhiyi Wei²; ¹School of Physics and Optoelectronics Engineering, Xidian Univ., China; ²CAS Inst. of Physics, China. We demonstrated a dual-wavelength Kerr-lens mode-locked Yb:YAG thin disk laser centered at the wavelengths of 1031 nm and 1049 nm, respectively. Total average output power was 12.9 W with typical pulse duration of 220 fs.

AM5A.27 • Cryogenically-Cooled Mode-Locked Yb:YAG Ceramic Laser, Jiri Muzik^{2,1}, Michal Jelinek², Taisuke Miura¹, Martin Smrz¹, Akira Endo¹, Tomas Mocek¹, Vaclav Kubecek²; ¹HILASE Center, Inst. of Physics CAS, Czech Republic; ²Faculty of Nuclear Sciences and Physical Engineering, Czech Technical Univ., Czech Republic. We demonstrate a passively mode-locked Yb:YAG (Yb:Y₃Ga₂Al₃O₁₂) ceramic laser generating picosecond pulses at 83-K temperature. In free-running regime at cryogenic temperature, 55% optical-to-optical efficiency and 8-nm wide tuning range were achieved.

AM5A.28 • Enhancing the Gain-bandwidth of a Kerr-lens Mode-locked Yb:YAG Thin-disk Oscillator Through Increased Nonlinearities, Jonathan Brons¹, Vladimir Pervak², Dominik Bauer³, Dirk Sutter³, Alexander Apolonski^{1,2}, Oleg Pronin¹, Ferenc Krausz^{1,2}; ¹Max-Planck-Institut für Quantenoptik, Germany; ²Ludwig-Maximilians-Universität München, Germany; ³TRUMPF Laser GmbH, Germany. The full emission-bandwidth of Yb:YAG is exploited by ensuring suitably high self-phase-modulation inside a Kerr-lens mode-locked oscillator. Applying a previously reported power-scaling scheme we reach 145 W, 140 fs pulses with 59 MW peak-power.

AM5A.29 • Ultrahigh-repetition-rate femtosecond optical parametric oscillator, Wenlong Tian², Zhaohua Wang¹, Jiangfeng Zhu², Zhiyi Wei¹; ¹Chinese Academy of Sciences, China; ²school of technical and optoelectronics engineering, Xidian Univ., China. We reported a synchronously pumped femtosecond optical parametric oscillator (OPO) with a record-high repetition rate of 1.37 THz by fractionally changing the OPO cavity length, which generating 138 fs signal pulses with 175 mW average power.

AM5A.30 • Passively Q-switched Tm:YAP laser and in-band pumped Cr:ZnSe polycrystalline crystal laser, Xiao Zou¹, Yuxin Leng¹, Yanyan Li¹, Yapei Peng¹, Yongjun Dong¹, Benxue Jiang¹, Long Zhang¹; ¹Shanghai Inst. of Optics and Fine Mechanics, Chinese Academy of Sciences, China. A passively Q-switched Tm:YAP laser was demonstrated with the maximum average output power of 1.32W. Moreover, we demonstrate a polycrystalline Cr:ZnSe crystal laser in-band pumped at 2000nm. Compared to the results for pumping at 1918nm, the slope efficiency was enhanced around 40%.

AM5A.31 • High-repetition-rate, high-peak-power passively Q-switched ceramic Nd:YAG 946 nm laser, Renpeng Yan¹, Xin Yu¹, Xudong Li¹, Zhiwei Dong¹, Yufei Ma¹, Jiang Li², Yubai Pan²; ¹Harbin Inst. of Technology, China; ²Shanghai Inst. of Ceramics, China. We demonstrate a high-repetition-rate, high-peak-power diode-pumped passively Q-switched ceramic Nd:YAG quasi-three-level laser at 946 nm. The maximum peak power reaches 12.4 kW with a pulse width of 13.0 ns at 3.3 kHz.

AM5A.32 • 750-nm LED-pumped Nd:YAG laser, Kuan-Yan Huang¹, YU-CHUNG CHIU¹, Cheng-Kuo Su¹, Meng-Wei Lin¹, Yen-Chieh Huang¹; ¹National Tsing Hua Univ., Taiwan. We report a Nd:YAG laser pumped by a broadband 750 nm LED. By pulsing the LED with a current 3 times above the maximum allowed CW current, the laser generates ~1 mW peak power from a 1.5% output coupler.

AM5A.33 • Thin-tapered-rod Yb:YAG single-crystal laser amplifier, Ivan Kuznetsov¹, Ivan Mukhin¹, Olga Vadimova¹, Oleg Palashov¹, Ken-Ichi Ueda^{1,2}; ¹Inst. of Applied Physics of the RAS, Russia; ²Inst. for Laser Science, Univ. of Electro-Communications, Japan. Thin-tapered-rod single-crystal active element is proposed to use in laser amplifiers. Numerical and experimental investigation of small signal gain in thin-rod and thin-tapered-rod geometries is performed and advantages of thin-tapered-rod active element are shown.

AM5A.34 • Tunable CW Solid-State Mid-IR Cr²⁺:CdSe Single Crystal Laser with Diode Laser Array Pumping, Mikhail K. Tarabrin^{1,2}, Alexander Kovtun¹, Vladimir Lazarev¹, Valeriy Karasik¹, Alexey Kireev², Vladimir Kozlovsky², Yuri Korostelin², Yuriy Podmar'kov^{2,3}, Mikhail Frolov^{2,3}, Mikhail Gubin^{2,4}; ¹Bauman Moscow State Technical Univ., Russia; ²Lebedev Physical Inst. of the Russian Academy of Sciences, Russia; ³Moscow Inst. of Physics and Technology, Russia. We demonstrate the first Cr²⁺:CdSe single crystal laser with diode laser array pumping. Laser efficiency of 12% with output power of 280 mW was obtained. Tunable CW operation was observed in 2450 – 3060 nm range.

AM5A.35 • Harmonic generation of Kerr-lens mode-locked Polycrystalline Cr:ZnS laser, Xintong Sun¹, Long Wei¹, Zhao Hua Wang², Zhiyi Wei²; ¹Xidi-an Univ., China; ²Inst. of physics, China. We demonstrated a Kerr-Lens mode-locked Polycrystalline Cr:ZnS laser pumped by a all-solid-state Er:YAG laser which yields at 1645 nm. Harmonic waves from second to fourth of the mode-locked were observed simultaneously for the first time.

AM5A.36 • Study on Synchronously pumped KGW solid-state Raman laser, Xiaoqiang Gao¹, Mingliang Long¹, Gang Li¹, Meng Chen¹; ¹Beijing Univ. of Technology, China. Up to 270mW multi-wavelength collinear Raman output and 7.429% overall efficiency are observed through developed synchronously pumped technology which has never been reported before. The developed technology also can be employed to the IR band.

AM5A.37 • High energy dissipative Raman soliton laser through XPM stabilization, Emre Ergelen¹, Ugur Tegin², Parviz Elahi², Cagri Sene³, F Omer Ilday^{2,4}; ¹Middle East Technical Univ., Turkey; ²Dept. of Physics, Bilkent Univ., Turkey; ³TUBITAK National Metrology Inst. (UME), Turkey; ⁴Dept. of Electrical and Electronics Engineering, Bilkent Univ., Turkey. Dispersion, nonlinearity and gain determine the intracavity pulse behaviour. We show that pump depletion and XPM play a significant role in the stabilization of high energy dissipative Raman solitons. Using this theoretical knowledge, we predict and demonstrate 7-nJ femtosecond pulses at 1120 nm.

AM5A.38 • Optimal Temperature for the Cryogenically Cooled 946-nm Nd:YAG Laser with Monolithic Resonator, C. Y. Cho¹, T. L. Huang¹, P. H. Tuan¹, J. C. Tung¹, Yung-Fu Chen^{1,2}; ¹Electrophysics, National Chiao Tung Univ., Taiwan; ²Electronic Engineering, National Chiao Tung Univ., Taiwan. An optimal temperature of 130 K is observed for the cryogenic 946-nm monolithic Nd:YAG laser. The pump criterion is discussed and the output power is up to 24 W with conversion efficiency of 71%.

AM5A.39 • Wavelength Control by Angle-Tuning of the Laser Radiation in an Intra-Cavity Pumped Yb:YAG Thin-Disk Laser, Christian Vorholt¹, Ulrich Wittrock¹; ¹Photonics Lab, Muenster Univ. of Applied Sciences, Germany. In an intra-cavity pumped thin-disk laser the pump radiation forms a standing wave pattern inside the intra-cavity pumped disk. We demonstrate experimentally that the grating period of the standing wave pattern of the pump radiation can control the laser wavelength.

AM5A.40 • Master Oscillator Power Amplifier Systems for Ion Beam Cooling, Daniel Kiefer¹, Tobias Beck¹, Thomas Walther¹; ¹Inst. of Applied Physics, TU Darmstadt, Germany. We present a fiber amplifier based laser at 1028 nm frequency converted to 257 nm. A pulse expansion currently set up for the system is also presented. The systems are used in cooling of highly relativistic ion beams at storage rings.

AM5A.41 • Intensity Noise Quantification of Regenerative Amplifiers, Martin A. Finger¹, Nicolas Y. Joly^{2,1}, Maria V. Chekhova^{1,2}, Philip S. Russell^{1,2}; ¹Max Planck Inst. for the Science of Light, Germany; ²Dept. of Physics, Univ. of Erlangen-Nuremberg, Germany. We quantify pulse-energy fluctuations of a regenerative amplifier by online measurement of the coefficient of variation and use this to optimize the cavity dumper. Applying this method, noise influence on an OPA is studied.

AM5A.42 • Controlling the Output Phase and Coherence of Degenerate Cavity Solid-State Lasers, Vishwa Pal¹, Chene Tradonsky¹, Ronen Chriki¹, Asher A. Friesem¹, Nir Davidson¹; ¹Weizmann Inst. of Science, Israel. Recent experimental results on controlling the output phase distributions and coherence of Nd:YAG solid-state lasers are presented. The control is achieved with a degenerate cavity configuration, diffractive coupling and intracavity spatial filters.

AM5A.43 • Single- and two-color laser generation from etalon out-coupled Nd:YVO₄ laser, Yu-Chung Chiu¹, Bo-Chang Wang¹, Ming-Hsiung Wu¹, Yen-Chieh Huang¹; ¹National Tsing Hua Univ., Taiwan. We demonstrate single and two-color laser from a c-cut Nd:YVO₄ crystal using a 114- μ m thick etalon as an output coupler. Wavelength selection is achieved by tilting the etalon to cause gain competition and suppression.

AM5A.44 • Pulse Stabilization in Multi-longitudinal Mode Passively Q-Switched Microchip Laser, Dimeng Chen¹, Ying Cheng¹, Jun Dong¹; ¹Xiamen Univ., China. Pulse stabilization in multi-longitudinal mode Yb:YAG enhanced Cr:Yb:YAG passively Q-switched microchip lasers has been achieved by carefully controlling the number, intensities of longitudinal modes and applied pump power intensity.

AM5A.45 • The Longitudinal Temperature Distribution in Active Fibers under Lasing Condition, Konstantin Prusakov¹, Oleg Ryabushkin¹, Victor Sypin¹; ¹Moscow Inst. of Physics and Technology, Russia. Novel method for precise temperature measurement of active fibers under conditions of laser generation and amplification is introduced. Measurements of temperature kinetics of active fibers allow determination of heat transfer coefficient at polymer air boundary.

AM5A.46 • Achieving Room Temperature Orange Lasing Using InGaP/InAlGaP Diode Laser, Ahmad A. Al-Jabr¹, Mohammed Abdulmajed¹, Mohammed S. Bin Alias¹, Tienkhee Ng¹, Boon Ooi¹; ¹King Abdullah Univ of Sci & Technology, Saudi Arabia. We demonstrated the first orange laser diode at room temperature with a decent total output power of ~46mW and lasing wavelength of 608nm, using a novel strain-induced quantum well intermixing in InGaP/InAlGaP red laser structure.

AM5A.47 • Continuous-wave Semiconductor Disk Laser Emitting at 224 nm via Intracavity Frequency Tripling, Julio M. Rodríguez García¹, David Pabœuf¹, Jennifer E. Hastie¹; ¹Univ. of Strathclyde, UK. We present frequency tripling of a tunable continuous-wave red AlGaInP semiconductor disk laser. From a fundamental beam at 674 nm, output power up to ~100 μ W and laser tunability over 1.8 nm are reported.

AM5A.48 • Generation and Characterization of High Power and Higher Order Ultrafast Optical Vortices, Apurv Chaitanya N^{1,2}, A. Aadhi^{1,2}, M. V. Jabir¹, M. R. Pathak¹, N. U. Shaikh¹, G. K. Samanta¹; ¹Physical Research Lab, India; ²Indian Inst. of Technology-Gandhinagar, India. We report on generation of high-power and high-order ultrafast optical vortex beams. Frequency-doubling of optical vortices at 1064nm in BIBO crystal, we have generated vortices of maximum power and order of ~900mW and 12 respectively.

AM5A.49 • Fiber Laser Based High Power, Ultrafast Source for 355 nm, Apurv Chaitanya N^{1,2}, A. Aadhi^{1,2}, M. V. Jabir¹, G. K. Samanta¹; ¹Physical Research Lab, India; ²Indian Inst. of Technology-Gandhinagar, India. We report a high powers, high repetition rate fiber laser based UV source providing output power as high as 1.06W at 355nm. The source has output pulses of width ~576fs and spectral width of 1.6nm.

AM5A.50 • 736 W Average Power All-fiber Nanosecond MOPA Based on Ultra-low NA Ytterbium Doped Fiber, Liangjin Huang¹, Haiyue Sun¹, Jinyong Leng¹, Shengping Chen¹, Pu Zhou¹, Shaofeng Guo¹, Xiang'ai Cheng¹; ¹College of Optoelectronic Science and Engineering, National Univ. of Defense Technology, China; ²Optoelectronic Research Center, Univ. of Southampton, UK. We report an all-fiberized high average power pulsed fiber amplifier based on ultra-low NA step-index Yb-doped double-clad fiber. An output power of 736W with M²~1.35 is obtained, which corresponds to 64kW peak-power and 0.39mJ pulse-energy.

AM5A.51 • Nonlinearity Management of Fiber Oscillator with Multiple Gain Segments, Tesfay Teamir¹; ¹Bilkent Univ., Turkey. Oscillator with two gain segments is used to manage nonlinearity level and distribution. Results suggest that pulse evolution subject to an effective negative nonlinearity arising from complex interaction of gain filtering, dispersion, SFM and chirp.

ATu1A • Rare-Earth Doped Materials

Bunsen Hall (Bunsensaal)

Presider: Jacob Mackenzie, Univ. of Southampton, UK

ATu1A.1 • 08:00

High Power Continuous Wave Tb³⁺:LiLuF₄ Laser, Philip W. Metz¹, Daniel-Timo Marzahl¹, Ahmad Majid¹, Christian Kraenkel^{1,2}, Günter Huber^{1,2}; ¹Institut für Laser-Physik, Universität Hamburg, Germany; ²Universität Hamburg, The Hamburg Centre for Ultrafast Imaging, Germany. We obtained up to 0.9 W of cw green output at 544 nm with highly Tb³⁺-doped LiLuF₄ under pumping with a 2ω-OPSL at 486 nm and investigated the laser performance at different doping concentrations.

ATu1A.2 • 08:12

Record laser wavelength tunability of Pr:LiYF₄ around 900nm, Biao Qu¹, Richard Moncorge², Zhiping Cai³, Jean-Louis Doualan⁴, Bin Xu³, Huying Xu³, Alain Braud², Patrice Camy²; ¹Univ. of Caen, CIMAP, France; ²Xiamen Univ., China; ³CIMAP, CNRS, France. CW laser wavelength tunability of 70 nm is demonstrated in the 900nm spectral range by pumping a Pr:LiYF₄ single crystal with an OPSL laser and by using a V-shape resonator and a quartz birefringent plate.

ATu1A.3 • 08:24

Polarization effects in Pr³⁺-doped cubic KY₃F₁₀ and stable dual wavelength lasing, Philip W. Metz¹, Thomas Calmano^{1,2}, Daniel-Timo Marzahl¹, Christian Kraenkel^{1,2}, Günter Huber^{1,2}; ¹Institut für Laser-Physik, Universität Hamburg, Germany; ²The Hamburg Centre for Ultrafast Imaging, Universität Hamburg, Germany. By proper selection of pump light wavelength, polarization, and crystal orientation, linearly polarized laser output, independent dual wavelength operation, and intracavity frequency doubling can be obtained in the cubic crystal Pr³⁺:KY₃F₁₀.

ATu1A.4 • 08:36

Visible Laser Emissions from Pr³⁺:LiLuF₄ Single Crystal Grown with the μ-Pulling Down Technique, Stefano Veronesi^{1,2}, Alberto Sottile¹, Zhonghan Zhang¹, Daniela Parisi^{2,1}, Alberto Di Lieto^{1,2}, Mauro Tonelli^{1,2}; ¹Fisica, Università di Pisa, Italy; ²Istituto Nanoscienze - CNR, Italy. We report the first laser emissions from a fiber-shaped crystal of Pr³⁺:LiLuF₄, grown with the micro-Pulling Down method, achieving high-grade slopes with diffraction-limited output beams. Segregation in the crystal was remarkably high for Praseodymium ions.

ATu1A.5 • 08:48

CW and Q-switched Diode-Pumped Laser Operation of Er,Yb:GdAl₃(BO₃)₄ Crystal, Konstantin Gorbachenya¹, Viktor E. Kisel¹, Anatol S. Yasukevich¹, Viktor V. Maltsev², Nikolai I. Leonyuk², Nikolai V. Kuleshov¹; ¹Center for optical materials and technologies, Belarus; ²Geological Faculty, Moscow State Univ., Russia. We report high-power CW and, for the first time to our knowledge, passively Q-switched Er,Yb:GdAl₃(BO₃)₄ laser with pulse energies of 4.5-44 μJ, pulse durations of 5-14.5 ns, and repetition rates of 5-100 kHz.

ATu1A.6 • 09:00

Lasing in Nd³⁺-doped Sapphire, Sven H. Waeselmann¹, Sebastian Heinrich¹, Christian Kraenkel^{1,2}, Günter Huber^{1,2}; ¹Institut für Laser-Physik, Universität Hamburg, Germany; ²The Hamburg Centre for Ultrafast Imaging, Universität Hamburg, Germany. We present the first Nd³⁺:sapphire laser with a quasi-continuous wave output of 80 mW at 1092 nm and 3.9% slope efficiency in a 2.6 μm thick planar waveguide geometry.

ATu1A.7 • 09:12

Exploring a Diffusion-Bonded Nd:YVO₄/Nd:GdVO₄ Crystal for Generating an Efficient Diode-End-Pumped Dual-Spectral-Band Laser, Yu-Jen Huang¹, Hsin-Ham Cho¹, Kuan-Wei Su¹, Yung-Fu Chen^{1,2}; ¹Dept. of Electrophysics, National Chiao Tung Univ., Taiwan; ²Dept. of Electronics Engineering, National Chiao Tung Univ., Taiwan. A diffusion-bonded Nd:YVO₄/Nd:GdVO₄ crystal is designed to generate a diode-end-pumped dual-spectral-band laser around 1.06 μm in Q-switched and mode-locked operations. Wavelength extension to eye-safe region via intracavity optical parametric oscillation is also demonstrated with this material.

ATu1A.8 • WITHDRAWN

Invited

ATu1A.9 • 09:36

Growth and Initial Experiments Demonstrating Watt Level Output From Yb:YAG Planar Waveguides Grown by Pulsed Laser Deposition, Stephen J. Beecher¹, James Grant-Jacob¹, Tina L. Parsonage¹, Ping Hua¹, Amol Choudhary², Jacob I. Mackenzie¹, David P. Shepherd¹, Robert Eason¹; ¹Optoelectronics Research Centre, UK; ²School of Physics, Univ. of Sydney, Australia. We report on the growth and initial characterization of pulsed laser deposited Yb:YAG. When used as a planar waveguide laser slope efficiencies of at least 34% are observed for a 45% reflectivity output coupler.

ATu1A.10 • 09:56

Energy-transfer enhanced anti-Stokes cooling efficiency in Yb doped fluoride single crystals, Mauro Tonelli^{1,2}, Alberto Di Lieto^{1,2}, Azzurra Volpi^{1,2}; ¹Università degli Studi di Pisa, Italy; ²NEST Istituto Nanoscienze-CNR, Italy. Optical cooling is investigated in Yb doped fluoride single crystals. Efficiency enhancement via Yb-Tm energy-transfer assisted anti-Stokes cooling is achieved in co-doped LiYF₄ single crystals.

ATu2A.1 • Thermal stability of ferroelectric domain gratings in Rb-doped KTiOPO₄, Gustav Lindgren¹, Alexandra Pena², Andrius Zakauskas¹, Charlotte Liljestränd¹, Bertrand Ménaert², Benoît Boulanger², Carlotta Canalias¹, ¹Laser Physics, KTH, Sweden; ²MCMF, Institut Néel/UJF/CNRS, France. We study the thermal stability of domain walls in periodically poled Rb-doped KTP crystals as a function of domain grating periodicity. Complete back-switching was observed by optical microscopy for sub-micrometer domains annealed at 730 °C.

ATu2A.2 • Laser-Induced Photonic Waveguides and Systems in Ferroelectric Crystals, Vladimir Shandarov¹, Anton Perin¹, Vladimir Ryabchenok¹, Feng Chen², ¹State Univ. of Control Systems and, Russia; ²School of Physics, Shandong Univ., China. Photonic waveguides and waveguide systems are created in ferroelectric crystals of lithium niobate and potassium sodium strontium barium niobate exploiting their pyroelectric properties and optical absorption at light wavelengths of 532 and 633 nm.

ATu2A.3 • Advanced NLO Crystals for Efficient Blue Laser Sources Based on SHG Processes, Lucian Gheorghie¹, Alexandru Achim¹, Flavius Voicu¹, George Stanciu¹, ¹INFLPR, Romania. La(Ca_{1-x}Sr_x)₄O(BO₃)₃ - LaSrCOB crystals (x = 0.0, 0.1, 0.3, 0.4) of good optical quality were grown by the Czochralski method and characterized. By a proper choice of the compositional parameter x, we can obtain blue light in the range of 495 - 473 nm through type-I NCPM SHG in LaSrCOB crystals.

ATu2A.4 • High-Average-Power, Picosecond Laser Induced Damage Behavior of Blank Lithium Niobate Crystals at 1030 nm, Florian Bach¹, Mark Mero¹, Ming-Hsien Chou², Frank Noack¹, Valentin Petrov¹, ¹Max Born Inst., Germany; ²HC Photonics Corp., Taiwan. R-on-1 laser induced breakdown thresholds are reported for a wide range of coated and uncoated lithium niobate crystals obtained at the laser parameters of 1030 nm, 1 ps, 10 and 100 kHz.

ATu2A.5 • Measurement of Continuous-Wave and Pulsed Laser Damage Thresholds of Nonlinear Optical Crystals at Various Wavelengths, Shekhar Guha¹, ¹US Air Force Research Lab, USA. Laser damage thresholds of state-of-the art nonlinear optical crystals including GaAs, GaP, CdSiP₂ and ZnGeP₂ measured at 1064 nm, 1550 nm and 1940 nm using continuous wave and pulsed lasers will be presented.

ATu2A.6 • Laser Induced Damage Threshold of CVD-Grown Single Crystal Diamond Surfaces with Various Surface Finishes, Sean Reilly¹, Vasili Savitski¹, Hangyu Liu¹, Stuart Reid², Des Gibson², Harpreet Dhillon³, Stefan Olsson Robbie³, Erdan Gu¹, Martin Dawson¹, Andrew Bennett³, Alan Kemp¹, ¹Inst. of Photonics, Univ. of Strathclyde, UK; ²Univ. of West of Scotland, UK; ³Element 6, UK. The laser induced damage threshold of diamond surfaces is presented and that of surfaces with various mechanical and chemical etch compared. The LIDT of the diamond surfaces was found to be around 26 Jcm⁻².

ATu2A.7 • Temperature dependence of magneto-optic effect in a Ti-doped terbium aluminum garnet (TAG) ceramic, Hiroaki Furuse¹, Ryo Yasuhara², Keijiro Hiraga¹, Shengming Zhou³, ¹Kitami Inst. of Technology, Japan; ²National Inst. for Fusion Science, Japan; ³Shanghai Inst. of Optics and Fine Mechanics, Chinese Academy of Sciences, China. The Verdet constant of a 0.8 at.% Ti-doped TAG ceramic was investigated between 5 and 296 K. A high value of the Verdet constant was obtained as 184.2 rad/Tm at 296 K for 632.8 nm.

ATu2A.8 • Next generation of Faraday isolators for IR high-power lasers and UV-visible LDs, Encarnacion G. Villora¹, ¹National Inst. for Materials Science, Japan. The oxide garnet {Tb₃[Sc_{2-x}Lu_x](Al₃)O₁₂ (TSLAG) is developed as alternative to Tb₃Ga₅O₁₂ (TGG). TSLAG exhibits better transmittance, Verdet constant, and radiation resistance. Further, PrF₃ and CeF₃ fluoride crystals are investigated as unique Faraday rotators for the UV-visible region.

ATu2A.9 • Thermally Induced Beam Distortions in CaF₂ and Other Elastically Anisotropic Cubic Single Crystals, Anton G. Vyatkin¹, Efim A. Khazanov¹, ¹Inst. of Applied Physics RAS, Russia. Thermally induced beam distortions in cubic single crystals with anisotropic elastic properties were calculated analytically and numerically. The isotropic expressions for birefringence and arithmetic mean phase have been generalized.

ATu2A.10 • Sandwich concept for absolute photo-thermal absorption measurements in nonlinear crystals and laser materials, Christian Muehlig¹, Simon Bublitz², ¹Leibniz Institut of Photonic Technology, Germany. A new concept enhances the capability of absolute photo-thermal absorption measurements with transversal probe beam guiding. The so-called sandwich concept is particularly designed to investigate nonlinear and laser crystals as well as high reflective coatings.

ATu2A.11 • High-order nonlinearities in Tb³⁺ doped calcium aluminosilicate glasses, Tomaz . Catunda¹, Jessica F. dos Santos¹, Luiz A. Nunes¹, Nelson . Astrath², Mauro L. Baesso², Richard Moncorgé³, ¹USP Inst de Fisica de Sao Carlos, Brazil; ²Fisica, Universidade Estadual de Maringá, Brazil; ³Université de Caen, France. Very high order nonlinearities were observed in Tb³⁺ doped glasses, using the time resolved Z-scan technique. Our results indicates that these nonlinearities are related to the intensity of the 4f5d transitions of the Tb³⁺ ion.

ATu2A.12 • Optimization of Resonantly Pumped Er:YAG Lasers by Modeling Energy Transfer Up-Conversion Processes, Xin Wang^{1,2}, Oliver Lux², Haro Fritsche², Hans J. Eichler², ¹Beijing Inst. of Technology, China; ²Inst. of Optics and Atomic Physics, Technische Universität Berlin, Germany. A theoretical model describing the performance of an Er:YAG laser under the influence of energy transfer up-conversion (ETU) is derived. The model was used to optimize an efficient diode-pumped Er:YAG laser at 1645 nm.

ATu2A.13 • Spectral-Luminescence Investigation of Strontium Molybdate Crystal Doped with Ho³⁺ and Tm³⁺ Ions, Liudmila Ivleva¹, Elizaveta Dunaeval¹, Maxim E. Doroshenko¹, Petr Zverev¹, Anastasia Nekhoroshikh¹, Vjatcheslav Osiko¹, ¹A.M.Prokhorov General Physics Inst., Russia. The absorption, fluorescence properties and laser oscillations of SrMoO₄ crystals doped with Tm³⁺ and Ho³⁺ were studied to develop the active medium for mid-IR lasers with self-Raman conversion of radiation.

ATu2A.14 • Thermal characteristics of Nd-doped disordered Nd:BaLaGa₃O₇ crystal, Yuanyuan Zhang¹, Xuping Wang¹, Yuguo Yang¹, Bing Liu¹, Xianshun Lv¹, Lei Wei¹, Haohai Yu², Huaijin Zhang², ¹Shandong Academy of Sciences, China; ²Shandong Univ., China. At room temperature, the specific heat, thermal diffusion coefficient and thermal conductivity were determined to be 0.365 J/g/K, 0.97 mm/s and 1.96 W/m/K. The conductivity increases with increasing temperature, which makes high power scaling possible.

ATu2A.15 • Spectroscopic and Laser Properties of Fe²⁺ Ions in Solid Solutions Based on ZnSe Crystal, Maxim E. Doroshenko¹, Vyacheslav Osiko¹, Helena Jelinkova², Michal Jelinek², Michal Nemecek², Nazar Kovalenko³, Andrii Gerasimenko³, ¹A.M. Prokhorov General Physics Inst RAS, Russia; ²Czech Technical Univ., Czech Republic; ³Inst. for Single Crystals NAN, Ukraine. Investigations of the spectroscopic and laser properties of Fe²⁺ ions in Zn_{1-x}Mg_xSe and Zn_{1-x}Mn_xSe solid solutions with different content x are carried out in the 77-300 K temperature range. The influence of the matrix material on the Fe²⁺ ion properties is discussed.

ATu2A.16 • Iron-doped CdxMn1-xTe Active Material for Mid-IR lasers, Helena Jelinkova¹, Jan Sulc¹, Michal Jelinek¹, Michal Nemecek¹, David Vyhldal¹, Maxim E. Doroshenko², Vyacheslav Osiko², Nazar Kovalenko³, Andrii Gerasimenko³, ¹Czech Technical Univ. Prague, Czech Republic; ²Laser Mat and Tech. Research Center, AM Prokhorov General Physics Inst of RAS, Russia; ³Inst for Single Crystals, NAS of Ukraine, Ukraine. Spectral characteristics of Fe:CdMnTe active material with different Cd-Mn composition are presented as well as the temperature dependence of fluorescence spectra and decay time.

ATu2A.17 • Lasing of Low-doped Tm:CaF₂ Ceramics and Single Crystal, Jan Sulc¹, Michal Nemecek¹, Martin Fibrich¹, Helena Jelinkova¹, Maxim E. Doroshenko², Vasily A. Konjushkin², Andrei Nakladov², Vyacheslav Osiko², ¹Czech Technical Univ. in Prague, Czech Republic; ²A.M. Prokhorov General Physics Inst RAS, Russia. The Tm(0.4 wt.%):CaF₂ crystal and ceramics were investigated. Possible forming of new Tm³⁺ optical centers during the hot-forming procedure was observed. Broad laser tunability in range 1820 -1910 nm was obtained.

ATu2A.18 • Grain size distribution for optimized random laser emission in Nd³⁺:YVO₄ powder pellets, Niklaus U. Wetter¹, Julia M. Ghiesl¹, ¹Centro de Lasers e Aplicações - IPEN/SP, Brazil. This work demonstrates a fivefold increase in laser efficiency of an Nd³⁺:YVO₄ random laser by using mixtures of grain sizes.

ATu2A.19 • Modeling of an Edge-Emitting strained-Ge laser, Giovanni Capellini¹, Michele Virgilio², Yuji Yamamoto¹, Lars Zimmermann¹, Bernd Tillack¹, Dirk Peschka³, Marita Thomas³, Annagret Glitzky³, Reiner Nürnberg³, Klaus Gärtner⁴, Thomas Koprucki³, Thomas Schroeder¹, ¹IHP Frankfurt (Oder), Germany; ²Università Pisa, Italy; ³WIAS, Germany; ⁴Università della Svizzera Italiana, Switzerland. By using fully-coupled 2D optoelectronic simulations with embedded microscopic gain calculations, we study the optoelectronic performance of a monolithically integrated edge-emitting laser based on strained germanium microstrips fabricated using CMOS standard processes.

ATu2A.20 • Q-switched pulse waveguide laser modulated by two-dimension materials, Yang Tan¹; ¹Shandong Univ., China. Two-dimension materials were utilized as the saturable absorber for the stable Q-switched pulse laser emission from the rare earth doped waveguide. The laser operation was at both the visible and near-infrared region, with a repetition rate ranging in the order of megahertz.

ATu2A.21 • Spectroscopy of Colour Centres in Diamond for Possible Laser Applications, Elisabeth Fraczek¹, Vasili Savitski¹, Svyatoslav Shcheka⁴, Matthew Dale², Ben Breeze², Harpreet Dhillon³, Andrew Bennett³, Dan J. Frost⁴, Mark Newton², Alan Kemp¹; ¹Univ. of Strathclyde, UK; ²Univ. of Warwick, UK; ³Element Six, UK; ⁴Bayerisches Geoinstitut, Universität Bayreuth, Germany. The emission and absorption characteristics of synthetic diamonds containing H3 colour centres with the luminescence lifetime of 10.5 ns at 520 nm are presented.

ATu2A.22 • Optical Parametric Oscillator Based on Degenerate Four Wave Mixing in Tellurite Microstructured Optical Fiber, Lei Zhang¹, Hong Tuan Tong¹, Harutaka Kawamura¹, Takenobu Suzuki¹, Yasutake Ohishi¹; ¹Toyota Technological Inst., Japan. Four-wave mixing-based optical parametric oscillator is achieved in a tellurite microstructured optical fiber. The oscillated signal can be tuned from 1606 to 1743.5 nm, and the idler can be tuned from 1526.8 to 1395 nm.

ATu2A.23 • Enhanced Pump Absorption Efficiency in Coiled and Twisted Double-Clad Thulium-Doped Fibers, Pavel Koška^{1,2}, Pavel Peterka¹, Jan Aubrecht¹, Ondrej Podrazky¹, Filip Todorov¹, Yauhen Baravets^{1,2}, Pavel Honzatkó¹, Ivan Kasik¹; ¹Inst. of Photonics and Electronics, Czech Republic; ²Czech Technical Univ., Czech Republic. Experimental demonstration of recently proposed pump-absorption-efficiency improvement technique in double-clad fibers is presented. The peak absorption (14 dB) of 3-m long hexagonal thulium-doped fiber was increased by 8 dB by its simultaneous coiling and twisting.

ATu2A.24 • Research progress of Yb doped LMA fiber by sol-gel method combined with powder sintering technique, Chunlei Yu¹; ¹Shanghai Inst of Optics & Fine Mechanics, China. The new progress of sol-gel method combined with high temperature sintering for the preparation of rare earth ion doped silica core glass and large mode area fiber have been proposed.

ATu2A.25 • Large-Core Fused-Silica Waveguides for High Power Applications, Gil Atar^{1,2}, Idan Casif², David Eger¹, Ariel Bruner¹, Bruno Sfez¹, Shlomo Ruschin²; ¹Applied Physics, Soreq, Israel; ²Electrical Engineering—Physical Electronics, Faculty of Engineering, Tel Aviv Univ., Israel. Silica-on-silica technology enables fabrication of on-chip devices for high-power applications. We demonstrate a 20X20 μ m Yb/Al-codoped fused-silica waveguide with <0.5dB/cm loss and 0.6dB/cm gain, showing near-single-mode operation and low propagation loss despite significant sidewall-roughness.

ATu2A.26 • Core/clad Tellurite Glass Pairs for Mid Infrared Supercontinuum Generation in High Numerical Aperture Step Index Optical Fiber, Joris Lousteau¹, Diego Pugliese², Nadia G. Boetti², Petr Janicek³, Edoardo Ceci Ginistrelli², Francesco Poletti¹, Daniel Milanese²; ¹Optoelectronics Research Centre, Univ. of Southampton, UK; ²DISAT, Politecnico di Torino, Italy; ³Faculty of Chemical Technology, Univ. of Pardubice, Czech Republic. We report on the design and fabrication of two tellurite glass compositions as core and cladding glasses for a high numerical aperture optical fiber for mid-infrared supercontinuum generation. Preform and fiber fabrications are also reported.

ATu2A.27 • Fabrication of an Optical Fiber Doped with Amorphous Yttrium Aluminosilicate Nanoparticles in the Core for Supercontinuum Generation, Tonglei Cheng¹, Meisong Liao², Xiaojie Xue¹, Jiang Li³, Dinghuan Deng¹, Xia Li², Danping Chen², Shupei Zheng², Takenobu Suzuki¹, Yasutake Ohishi¹; ¹ofmlab, Japan; ²Chinese academy of sciences, Key Lab of Materials for High Power Laser Shanghai Inst. of Optics and Fine Mechanics, China; ³Chinese Academy of Sciences, Key Lab of Transparent Opto-functional Inorganic Materials, China. We design and fabricate an optical fiber doped with amorphous yttrium aluminosilicate (YAS, Y₂O₃-Al₂O₃-SiO₂) nanoparticles in the core, and investigate its supercontinuum (SC) generation at different pump wavelength.

ATu2A.28 • 2-D materials-based passively Q-switched 635 nm Pr³⁺-doped ZBLAN fiber lasers, Duanduan Wu¹, Jian Peng², Yile Zhong¹, Yongjie Cheng¹, Biao Qiu¹, Jian Weng², Zhengqian Luo¹, Bin Xu¹, Nan Chen¹, Huiying Xu¹, Zhiping Cai¹; ¹Xiamen Univ., China; ²Biomaterials, Biomaterials, China. Passively Q-switched 635 nm Pr³⁺-doped down-conversion fiber lasers have been successfully demonstrated with BP, TMD and TIs saturable absorbers, respectively. The Q-switching lasers all have ~200 kHz tunable repetition rate range and ns-level pulse duration.

ATu2A.29 • The research of dispersion mirrors for ultrafast laser applications, Yanzi Wang¹, Yu Chen², Kui Yi¹, Hongji Qi¹, Guohang Hu¹, Jianda Shao¹; ¹Shanghai Inst of Optics & Fine Mechanics, China; ²Shanghai Univ., China. One of the key techniques of generating ultrafast pulse is the perfect management of different dispersions. Three types of dispersion mirrors, broadband chirped mirror, high dispersion mirror, and low dispersion mirror, are discussed for different dispersion requirements.

ATu2A.30 • Progress in Reflective Diffraction Gratings Used in High Power Laser System, Jin Yunxia¹; ¹Key Lab of Materials for High Power Laser, Shanghai Inst. of Optics and Fine Mechanics, China. Reflective diffraction gratings are driving the development of high power chirped pulse amplification technology and high power fiber laser spectral beam combining. Near half-meter (metal) multilayer dielectric gratings, and polarization-independent spectral combining gratings have made a big step.

ATu2A.31 • WITHDRAWN

ATu2A.32 • Mid-infrared Supercontinuum Covering 3-10 μ m Using a As₂Se₃ Core and As₂S₅ Cladding Step-index Chalcogenide Fiber, Dinghuan Deng¹, Lai Liu¹, Tong H. Tuan¹, Yasuhiro Kanou¹, Morio Matsumoto², Hiroshige Tezuka², Takenobu Suzuki¹, Yasutake Ohishi¹; ¹Toyota Technological Inst., Japan; ²Furukawa Denshi Co., Ltd., Japan. A mid-infrared supercontinuum source covering 3-10 μ m is successfully demonstrated in a 4-cm-long core and cladding step-index chalcogenide fiber pumped with the MIR pulse generated by difference frequency generation.

ATu2A.33 • 400W Ytterbium-doped fiber oscillator at 1018nm, Chu Peng Seah¹, Tze Yang Ng¹, Song-Liang Chua¹; ¹DSO National Labs, Singapore. We present a Yb-doped fiber laser with 403W output power operating at 1018nm. The laser had an optical efficiency of 66% and M²=1.51. Laser displayed excellent spectral purity with no sign of ASE.

ATu2A.34 • Stretched-pulse Kerr Mode-locked Generation in Erbium-doped Ring Laser with Highly Nonlinear All-fiber Resonator, Dmitriy A. Dvoretzkiy¹, Vladimir Lazarev¹, Vasiliy S. Voropaev¹, Zhanna N. Rodnova¹, Stanislav G. Sazonkin¹, Stanislav O. Leonov¹, Alexey B. Pnev¹, Valeriy Karasik¹, Alexander A. Krylov²; ¹Bauman Moscow State Technical Univ., Russia; ²Fiber Optic Research Center, Russian Academy of Sciences, Russia. We obtained stretched pulse generation with 12 MHz repetition rate, average output power 16.7 mW and 48.1 nm spectral pulse width in the All-fiber Kerr Mode-locked Erbium-doped Ring Laser with a high nonlinear fiber inside the resonator with slightly positive net-cavity GVD.

ATu2A.35 • 70 fs hybrid mode-locked Erbium-doped fiber laser with topological insulator, Wen Liu^{1,2}, Lihui Pang², Hainian Han², Wenlong Tian², Peiguang Yan³, Hao Chen³, ming lei¹, Zhiyi Wei²; ¹School of Science, Beijing Univ. of Posts and Telecommunications, China; ²Inst. of Physics, Chinese Academy of Sciences, China; ³College of Optoelectronic Engineering, Shenzhen Univ., China. The hybrid mode-locked Erbium-doped fiber laser with fiber-taper TI: Sb₂Te₃ saturable absorber is presented for the first time. With 57mW average power, the 3-dB spectral width and pulse duration are measured 63 nm and 70fs, respectively.

ATu2A.36 • Generation of Supercontinuum LP_{0n} Modes in Highly Multimode Gradient-Index Fiber, Geoffroy Granger¹, Christian Röhrer¹, Götz Kleem¹, Marwan Abdou-Ahmed¹, Thomas Graf¹; ¹IFSW, Germany. We report, for the first time, on the generation, in a highly multimode gradient-index fiber, of supercontinuum (from visible to near infrared) with up to 54 mW of average power and emitting in LP_{0n} modes.

ATu2A.37 • Reducing ASE in Burst-Mode, Low Repetition Rate Fiber Amplifiers, Jaka Petelin², Bostjan Podobnik², Rok Petkovsek¹; ¹Univ. of Ljubljana, Slovenia; ²LPKF, Slovenia. The effect of pulsed-pumping on amplified spontaneous emission (ASE) in low repetition rate fiber amplifiers is presented. The experimental data is compared to numerical model, showing a significant suppression of ASE at low repetition rates.

ATu2A.38 • All-Solid-State Continuous-wave Yellow-Green Ceramic Laser at 0.56 μm , Jing Gao¹, Wenming Yao¹, Long Shang¹, Jiang Li², Yubing Tian², Yufei Ma³, Xiaodong Wu¹, Gangfei Ma¹, Jianming Yang¹, Yubai Pan², Xianjin Dai¹; ¹Jiangsu Key Lab of Medical Optics, Suzhou Inst. of Biomedical Engineering and Technology, Chinese Academy of Sciences, China; ²Key Lab of Transparent Opto-Functional Inorganic Materials, Shanghai Inst. of Ceramics, Chinese Academy of Sciences, China; ³National Key Lab of Science and Technology on Tunable Laser, Harbin Inst. of Technology, China. We demonstrate an all-solid-state continuous-wave yellow-green ceramic laser at 0.56 μm . The highest cw output powers of 1.4, 0.5 and 1.1 W at 556, 558 and 561 nm are achieved, respectively.

ATu2A.39 • Final EDP Ti: Sapphire Amplifiers for New Generation of Ultra-High Power Laser Systems, Vladimir V. Chvykov¹, Mikhail Kalashnikov¹, Károly Osyay¹; ¹ELI-ALPS, Hungary. We studied the concept of EDP amplification for the 10-100 PW level of the three ELI-pillars laser systems. The design of EDP – duty amplifiers required to achieve these parameters was done and will be reported.

ATu2A.40 • Thermal Dynamics of Petawatt Class Ti:Sapphire EDP Thin Disk Amplifiers, Roland Nagymihály¹, Vladimir V. Chvykov¹; ¹ELI-HU Non-Profit Ltd., Hungary. Thermal simulations on petawatt scale Ti:Sapphire amplifiers were performed to investigate the thermal limits of thin disk amplification by using finite element method. Several amplifier parameters were investigated, including crystal, cooling, and pump beam properties.

ATu2A.41 • kW-class Zig-Zag Active-Mirror Laser Amplifier with Jet Impingement Cooling, Koichi Hamamoto¹, Tomoya Morioka¹, Shingo Nishikata¹, Naoki Inoue¹, Junnosuke Nakatani¹, Seiji Taniguchi², Haik Chosrowjan², Yasukazu Izawa²; ¹Mitsubishi Heavy Industries, Japan; ²Inst. for Laser Technology, Japan. We developed a Yb:YAG Zig-Zag Active-Mirror laser amplifier with jet impingement cooling system for high average power laser systems. The output power of laser was beyond 1kW which was stable nearly 30 minutes.

ATu2A.42 • High power efficient SESAM-mode-locked Yb:KGW bulk laser, Viktor E. Kisel¹, Alexander S. Rudenkov¹, Anatoliy A. Pavlyuk², Alexander Kovalyov³, Valeri Preobrazhenskii³, Mikhail Putyato³, Natalia Rubtsova³, Boris Semyagin³, Nikolai V. Kuleshov¹; ¹Center for Optical Materials and Technologies, Belarusian National Technical Univ., Belarus; ²Nikolaev Inst. for Inorganic Chemistry, Siberian Branch of Russian Academy of Sciences, Russia; ³RzhanovInst. of Semiconductor Physics, Siberian Branch of Russian Academy of Sciences, Russia. Diode-pumped SESAM mode-locked Yb:KGW bulk laser was demonstrated with average output powers up to 8.8W, pulse durations as short as 162fs and optical-to-optical efficiency up to 37.5%.

ATu2A.43 • Picosecond 1342 nm Nd:YVO₄ Laser with 10 W Output at 300 kHz and Conversion to 671, 447, 224 and 192 nm, Aleksey Rodin^{1,2}, Mikhail Grishin^{1,2}, Nortautas Ulevicius¹, Andrejus Michailovas^{1,2}; ¹Center for Physical Sciences and Technology, Lithuania; ²Ekspla Ltd, Lithuania. Regenerative amplifier based on composite multiply Nd doping level vanadate rod pumped with 880 nm provides 13 ps pulses of 11 W average power at 1342 nm wavelength with M² ~ 1.1 beam quality. High peak power facilitates efficient harmonics conversion.

ATu2A.44 • Injection Seeded Nd:YAG Pulsed Laser with Sinusoidal Modulation Voltage, Yongfei Gao^{1,2}, Junxuan Zhang^{2,3}, Huaguo Zang², Xiaolei Zhu², Yingjie Yu¹, Weibiao Chen²; ¹Shanghai Univ., China; ²Shanghai Inst of Optics and Fine Mech, China; ³Univ. of Chinese Academy of Sciences, China. Applying a sinusoidal modulation voltage to the piezoactuator, seeder injection by ramp-and-fire method is successfully realized, and stable single frequency laser pulse output is achieved from a laser diode pumped Nd:YAG laser at a repetition rate of 400Hz.

ATu2A.45 • Simultaneous Amplification of Multiple 2 μm Vortex Beams, Yuan Li¹, Zeyu Zhang¹, Wenzhe Li¹, Keith Miller¹, Eric Johnson¹; ¹The Holcombe Dept. of Electrical and Computer Engineering, Clemson Univ., USA. The generation and simultaneous amplification of multiple 2 μm vortex beams with orbital angular momentum is demonstrated in a Ho:YAG rod amplifier. Simulations predict the amplifier's potential in power scaling and in spatial division multiplexing.

11:30—12:30

Industry Panel Discussion: What are the Limitations of Technology?

Bunsen Hall (Bunsensaal)

Panelists: Klaus Löffler, TRUMPF Laser und Systemtechnik GmbH, Germany

Torsten Mans, Amphos, Germany

Eric Mottay, Amplitude Systems, France

Bojan Resan, JDSU Ultrafast Laser AG, Switzerland

(See page 10 for more information)

12:30—14:00 • Lunch with the Exhibitors, Throughout the Venue

14:00—15:52

ATu3A • Source & Materials Joint Session

Bunsen Hall (Bunsensaal)

President: Jay Dawson, Lawrence Livermore National Lab, USA

ATu3A.1 • 14:00

Invited

Real-time Terahertz-wave Imaging Based on Nonlinear Optical Up-conversion, Hiroaki Minamide¹; ¹RIKEN, Japan. We demonstrate a terahertz-wave imaging at video-rate by nonlinear frequency up-conversion in an organic nonlinear crystal. The sensitive imaging supported by efficient conversion from terahertz-wave to near-infrared light is presented.

ATu3A.2 • 14:20

Invited

Recent Developments on the Lithium Niobate Material Platform: The Silicon of Nonlinear Optics?, Katia Gallo¹, Mohammad Amin Baghban¹; ¹Applied Physics, KTH - Royal Inst. of Tech., Sweden. The talk addresses current challenges and future prospects in combining nanoTech., ferroelectric domain structuring and integrated optics in LiNbO₃ materials to develop small-footprint devices for telecom and quantum optics, and potentially also life-science, applications.

ATu3A.3 • 14:40

Competition Effects Between Stimulated Raman and Polariton Scattering in Intracavity KTiOPO₄ Crystal, Tiago Ortega¹, Helen M. Pask¹, David Spence¹, Andrew Lee¹; ¹Dept. of Physics and Astronomy, Macquarie Univ., Australia. Wavelength-tunable stimulated polariton scattering (SPS) in intracavity KTiOPO₄ (KTP) crystal is demonstrated for the first time. Fundamental 1064nm and SRS-first-stokes-shifted 1095.5nm laser lines produced, simultaneously, tunable SPS output from 1080 to 1087nm and 1112 to 1119nm, respectively.

ATu3A.4 • 14:52

Pulsed visible lasers with low dimensional semiconductors, Haohai Yu¹, Yuxia Zhang¹, Shuxian Wang¹, Huaijin Zhang¹, Yanxue Chen², Liangmo Mei², Alberto Di Lieto³, Mauro Tonelli³, Jiyang Wang¹; ¹State Key Lab of Crystal Materials and Inst. of Crystal Materials, Shandong Univ., China; ²School of Physics, Shandong Univ., China; ³NEST Istituto Nanoscienze-CNR and Dipartimento di Fisica dell', Università di Pisa, Italy. Pulsed lasers in the visible range are playing important roles in our daily life and modern Tech.. Here, we demonstrated the pulsed visible lasers based on atomic-layer molybdenum sulfide (MoS₂), which was an ultrathin two-dimensional material.

ATu3A.5 • 15:04

Microchip Laser Operation of Yb-Doped Gallium Garnets, Josep Maria Serres¹, Venkatesan Jambunathan², Pavel Loiko^{1,3}, Xavier Mateos^{1,4}, Haohai Yu⁵, Huaijin Zhang⁵, Junhai Liu⁶, Antonio Lucianetti², Tomas Mocek², Konstantin V. Yumashev³, Uwe Griebner⁴, Valentin Petrov⁴, Magdalena Aguiló¹, Francesc Díaz¹; ¹Fisica i Cristallografia de Materials i Nanomaterials (FiCMA-FiCNA), Universitat Rovira i Virgili (URV), Spain; ²HiLASE Centre, Inst. of Physics ASCR, Czech Republic; ³Center for Optical Materials and Technologies, Belarusian National Technical Univ., Belarus; ⁴Max Born Inst. for Nonlinear Optics and Short Pulse Spectroscopy, Germany; ⁵State Key Lab of Crystal Materials, Shandong Univ., China; ⁶College of Physics, Qingdao Univ., China. Thermal lens and microchip laser operation were studied for Yb:YGG, Yb:LuGG, Yb:CNGG and Yb:CLNGG. A diode-pumped Yb:LuGG laser generated a maximum output power of 9.0 W at 1040 nm with 75% slope efficiency.

ATu3A.6 • 15:16

Continuous wave four-wave mixing at 2 micron in Chalcogenide microstructured fiber, Davide Grassani¹, Sida Xing¹, Svyatoslav Kharitonov¹, Adrien Billat¹, Steevy Cordette¹, Armand Vedadi¹, Camille-Sophie Brès¹; ¹Photonic System Lab, EPFL, Switzerland. We present the first demonstration of continuous wave four-wave mixing at 2µm in a short chalcogenide microstructure fiber. Idlers over approximately 15nm were measured for a coupled pump power of 94mW.

ATu3A.7 • 15:28

High Energy Q-switching and Cavity Dumped Q-switching of a Diode-pumped Alexandrite Laser, Gabrielle M. Thomas¹, Ara Minassian², Achaya Teppitaksak¹, Michael J. Damzen¹; ¹Imperial College London, UK; ²Bessemer Building, Prince Consort Rd, Unilase Ltd., UK. We present 3mJ Q-switched and 0.5mJ cavity dumped Q-switched pulse energies from a diode-pumped Alexandrite laser operating at 758nm. Preliminary results of second harmonic generation to the UV (379nm) with ~47% conversion efficiency are reported.

ATu3A.8 • 15:40

New Levels of Dispersion of Highly Dispersive Mirrors, Elena Fedulova¹, Kilian Fritsch², Jonathan Brons¹, Oleg Pronin^{1,2}, Tatiana Amotchkina³, Michael Trubetskov^{1,3}, Ferenc Krausz^{1,2}, Vladimir Pervak²; ¹Max Planck Inst. of Quantum Optics, Germany; ²Ludwig Maximilians Univ., Germany; ³Research Computing Center, Moscow State Univ., Russia. Here we report a highly-dispersive mirror with a group delay dispersion of -10000 fs² for wavelengths 1025 -1035 nm. This allows power scaling in a 300-fs Yb:YAG oscillator.

ATu4A • Novel Ultrafast Source
Bunsen Hall (Bunsensaal)
Presider: Thomas Sudmeyer, Université de Neuchâtel, Switzerland

Tuesday, 6 October

ATu4A.1 • 16:30

Invited

Industrial Ultrafast Lasers: Tech. and Economics, Eric Mottay¹; ¹Amplitude Systemes, France. Ultrafast lasers are today an important part of many industrial processes, due to their ability for high quality material processing. We will present recent applications showing that they offer as well cost effective industrial solutions.

ATu4A.2 • 16:50

Average Power Scaling of Sub-2 cycle Lasers to the Kilowatt Regime, Jan Rothhardt^{1,2}, Steffen Hädrich^{1,2}, Robert Klas¹, Getnet K. Tadesse^{1,2}, Armin Hoffmann¹, Maxim Tschernajew^{1,2}, Arno Klenke^{1,2}, Zoltan Várallyay³, András Drozdý³, Eric Cormier³, Andreas Liem⁴, Thomas Schreiber⁴, Jens Limpert^{1,2}, Andreas Tünnermann^{1,4}; ¹Inst. of Applied Physics, Germany; ²Helmholtz-Inst. Jena, Germany; ³ELI-ALPS, ELI-HU Non-Profit Ltd., Hungary; ⁴Fraunhofer Inst. for Applied Optics and Precision Engineering, Germany. A comprehensive study on power scaling of nonlinear compression towards kilowatt sub-2 cycle pulses is presented. Kilowatt level transmission through standard glass capillaries and the development of suitable high-power capable few-cycle optics are discussed.

ATu4A.3 • 17:02

High-contrast 10-fs OPCPA-based Front-End for the Apollon-10PW laser, Dimitris N. papadopoulos², Patricia Ramirez¹, Alain Pellegrina^{2,1}, Nathalie Lebas^{2,1}, Catherine Leblanc², Gilles Chériaux², Ji Ping Zou², Gabriel Mennerat³, Pascal Monot³, François Mathieu², Patrick Audebert², Patrick Georges¹, Frederic P. Druon¹; ¹Laboratoire Charles Fabry, France; ²LULI, France; ³CEA, France. We present a high-contrast 10-fs Front-End for Ti:sapphire PW-lasers within the Apollon-10PW project. This injector uses OPCPA pumped at 100Hz by Yb-based CPA chain. Combination of OPCPA and XPW permits a $>10^{12}$ contrast ratio.

ATu4A.4 • 17:14

340W Femtosecond Burst-mode Non-collinear Optical Parametric Amplifier for the European XFEL Pump-probe-laser, Mikhail Pergament¹, Martin Kellert¹, Kai Kruse¹, Jinxiong Wang¹, Guido Palmer¹, Laurens Wissmann¹, Ulrike Wegner¹, Moritz Emons¹, Max J. Lederer¹; ¹European XFEL, Germany. The burst-mode NOPA produces up to 340W burst-power and 1.57mJ single pulse energy at rep-rates between 188kHz and 4.5MHz. The pulses are compressible to <15 fs and the output beam at 800nm is diffraction limited.

ATu4A.5 • 17:26

Oscillator-Driven High Harmonic Generation, Florian Emaury¹, Andreas Diebold¹, Clara Saraceno¹, Ursula Keller¹; ¹ETH Zurich, Switzerland. We present high harmonic generation at 2.4 MHz from the compressed output of a thin-disk-oscillator for the first time. Reaching $>5 \times 10^7$ photons/s (19th harmonic), this result opens the path towards compact high-repetition rate XUV sources.

ATu4A.6 • 17:38

65 fs SESAM Mode-Locked Diode-Pumped Yb:CaF₂ Laser, Federico Pirzio¹, Samuele D. Di Dio Cafiso^{1,2}, Matthias Kemnitzer², Florian Kienle², Annalisa Guandalini², Juerg Aus der Au², Antonio Agnesi¹; ¹Universita degli Studi di Pavia, Italy; ²Spectra-Physics Rankweil, Austria. We present an efficient, single-mode diode-pumped SESAM-mode-locked Yb:CaF₂ laser with pulses as short as 65 fs. Higher average output power up to 1.4 W with 87-fs-long almost Fourier-transform limited pulses were demonstrated as well.

ATu4A.7 • 17:50

200-MHz Repetition-Rate, All-Fiber Soliton Er-Laser Mode-Locked by a Planar Lightwave Circuit-Based Carbon Nanotube Saturable Absorber, Chur Kim¹, Dohyun Kim¹, YeonJoon Cheong¹, Dohyeon Kwon¹, Sunyoung Choi², Hwanseong Jeong², Sang Jun Cha³, Jeong-Woo Lee⁴, Dong-Il Yeom², Fabian Rotermund², Jungwon Kim¹; ¹School of Mechanical and Aerospace Engineering, Korea Advanced Inst. Science and Tech., Korea (the Republic of); ²Dept. of Energy Systems Research & Dept. of Physics, Ajou Univ., Korea (the Republic of); ³FIBERPRO Inc., Korea (the Republic of); ⁴FM Solution Inc., Korea (the Republic of). We fabricate an evanescent-field-interacting carbon nanotube saturable absorber (CNT-SA) based on standard planar lightwave circuit (PLC) fabrication process. A 200-MHz repetition-rate all-fiber soliton Er-laser is demonstrated using this PLC-based CNT-SA.

ATu4A.8 • 18:02

Diamond Raman laser generating 25.5 fs pulses, Jipeng Lin¹, David Spence²; ¹Macquarie Univ., Australia. We have demonstrated a 25.5 fs diamond Raman laser, which was synchronously-pumped by a 128 fs Ti:sapphire laser. The bandwidth of the Raman laser was significantly broadened by self-phase-modulation, with the effect maximized by compensating the intracavity dispersion using chirped mirrors.

ATu4A.9 • 18:14

Widely tunable optical parametric oscillator based on four-wave mixing, Thomas Gottschall², Jens Limpert², Andreas Tünnermann^{2,1}; ¹Fraunhofer Inst. for Applied Optics and Precision Engineering, Germany; ²Inst. of Applied Physics, Abbe Center of Photonics, Germany. A broadly tunable, synchronously pumped optical parametric oscillator based on four-wave mixing in a PCF fiber is demonstrated. The setup generates signal wavelengths between 800 and 975nm and idler wavelengths 1125 and 1420 nm.

AW1A • Nanomaterials and Waveguides

Bunsen Hall (Bunsensaal)

Presider: Christian Kraenkel, Universität Hamburg, Germany

AW1A.1 • 08:00

Graphene-Gold Supercapacitor As a Voltage-Controlled Saturable Absorber for Femtosecond Pulse Generation, Isinsu Baylam¹, Osman Balci², Nurbek Kakenov², Coskun Kocabas², Alphan Sennaroglu¹; ¹Koc Univ., Turkey; ²Bilkent Univ., Turkey. We report, for the first time to our knowledge, a voltage-controlled graphene-gold supercapacitor saturable absorber, as a modulator with adjustable insertion loss for low-gain mode-locked lasers. Nearly transform-limited, 80-fs pulses were generated near 1240 nm.

AW1A.2 • 08:12

SESAM mode-locked Tm:CALGO laser at 2 μm, Yicheng Wang¹, Guoqiang Xie³, Xiaodong Xu⁴, Juqing Di⁵, Zhipeng Qin³, Soile Suomalainen⁶, Mircea Guina⁶, Antti Härkönen⁶, Antonio Agnesi⁷, Uwe Griebner¹, Xavier Mateos^{1,2}, Pavel Loiko⁸, Valentin Petrov¹; ¹Max Born Inst., Germany; ²Universitat Rovira i Virgili, Spain; ³Shanghai Jiao Tong Univ., China; ⁴Jiangsu Normal Univ., China; ⁵Vital Materials Co., China; ⁶Tampere Univ. of Tech., Finland; ⁷Universita di Pavia, Italy; ⁸Belarusian National Technical Univ., Belarus. GaSb-based SESAM is successfully employed for passive mode locking of a Tm³⁺: CaGdAlO₄ laser operating near 2 μm. The pulse duration is around 650 fs at a repetition rate ~100 MHz.

AW1A.3 • 08:24

Oriented Single-Walled Carbon Nanotubes as Saturable Absorber for Passive Q-Switching of a Tm:KLuW Microchip Laser, Josep Maria Serres¹, Xavier Mateos^{1,2}, Pavel Loiko^{1,3}, Joan Rosell-Llompart^{4,5}, Luis B. Modesto-López⁴, Konstantin V. Yumashev³, Uwe Griebner², Valentin Petrov², Joan J. Carvajal¹, Magdalena Aguiló¹, Francesc Díaz¹; ¹Física i Cristallografia de Materials i Nanomaterials (FICMA-FICNA), Universitat Rovira i Virgili (URV), Spain; ²Max Born Inst. for Nonlinear Optics and Short Pulse Spectroscopy, Germany; ³Center for Optical Materials and Technologies, Belarusian National Technical Univ., Belarus; ⁴Chemical Engineering Dept., Universitat Rovira i Virgili, Spain; ⁵ICREA - Catalan Institution for Research and Advanced Studies, Spain. A Tm:KLuW laser is Q-switched with a saturable absorber based on aligned SWCNTs, generating a maximum average output power of 260 mW with a slope efficiency of 12%. The shortest pulse duration is 97 ns.

AW1A.4 • 08:36

Invited

Advances in Femtosecond Laser Nanostructuring in Glass: From Printed Geometrical Phase Optics to Eternal Data Storage, Peter Kazansky¹; ¹Univ. of Southampton, UK. Formation of sub-wavelength periodic structures in bulk transparent materials during irradiation with intense ultrashort light pulses remains a mystery. Nevertheless the phenomenon has enabled unique applications ranging from printed flat optics to eternal data storage.

AW1A.5 • 08:56

Ultrafast Laser Inscribed Pr:KY₃F₁₀ Waveguides for Dual Wavelength and Switchable Waveguide Lasers in the Visible, Thomas Calmano^{1,2}, Alberto Sottile³, Philip W. Metz¹, Daniela Parisi^{3,4}, Christian Kraenkel^{1,2}, Mauro Tonelli^{3,4}, Günter Huber^{1,2}; ¹Institut für Laser-Physik, Universität Hamburg, Germany; ²The Hamburg Centre for Ultrafast Imaging, Germany; ³Dipartimento di Fisica, Università di Pisa, Italy; ⁴Nest, Istituto Nanoscienze – CNR, Italy. Diode pumped fs-laser written Pr:KY₃F₁₀ waveguide lasers with 42 mW output power in the visible spectral region are presented. Utilizing polarization dependent spectroscopic properties of cubic Pr:KY₃F₁₀ dual wavelength and switchable laser operation was achieved.

AW1A.6 • 09:08

7 W Diode-End-Pumped PLD-Grown Yb:Lu₂O₃ Planar Waveguide Laser, Tina L. Parsonage¹, Stephen J. Beecher¹, Amol Choudhary², James Grant-Jacob¹, Ping Hua¹, Jacob I. Mackenzie¹, David P. Shepherd¹, Robert Eason¹; ¹Univ. of Southampton, UK; ²CUDOS School of Physics and Astronomy, Univ. of Sydney, Australia. An Yb:Lu₂O₃ planar waveguide laser fabricated by pulsed laser deposition has reached on output power in excess of 7 W, with a slope efficiency of 38%, end-pumped by a diode bar.

AW1A.7 • 09:20

Mid-infrared compact Cr:ZnS helical cladding waveguide laser, Ya-Pei Peng^{1,2}, Zhengyuan Bai^{1,2}, Benxue Jiang¹, Long Zhang¹, Xiao Zou^{1,2}, Yuxin Leng¹; ¹Shanghai Inst Optics & Fine Mech, CAS, USA; ²Univ. of Chinese Academy of Sciences, Beijing 100039, China, China. A mid-infrared helical cladding waveguide laser in Cr:ZnS operating at 2244nm is demonstrated. A maximum power output of 78mW and optical-optical slope efficiency of 8.6% are achieved.

AW1A.8 • 09:32

18 dB cw Raman on-off Gain in Silicon-On-Insulator Nanowire Waveguide Laser Amplifiers, Shaimaa Mahdi¹, Hanjo Rhee¹, Aws Al-Saadi¹, Christoph Theiss¹, Bülent A. Franke¹, Sebastian Kupijai¹, David Selicic¹, Lars Zimmermann², Bernd Tillack², Harald Richter², Hans J Eichler¹, Stefan Meister¹; ¹Technical Univ. Berlin, Germany; ²IHP - Innovations for High Performance Microelectronics, Germany. Optical cw Raman gain of 18.4dB in SOI-nano-rib waveguides was obtained at 45mW internal pump power. Nonlinear on-off-gain increase at about 30mW pump power indicates that the Raman amplifier approaches the lasing threshold.

AW2A • Novel Fiber-based Sources
Bunsen Hall (Bunsensaal)
 Presider: Almantas Galvanauskas, Univ. of Michigan, USA

Invited

AW2A.1 • 11:15

Mitigation Strategies for Optical Nonlinearities in Kilowatt-class Narrow-linewidth Fiber Amplifiers, Iyad Dajani¹, Angel Flores¹, Benjamin Pulford¹, Nader Naderi¹; ¹*US Air Force Research Lab, USA*. We discuss mitigation strategies for optical nonlinearities in high-power fiber amplifiers suitable for coherent or spectral beam combining. The optical nonlinearities include SBS, SRS, XPM and modal instability. Both conventional and microstructured amplifiers are considered.

AW2A.2 • 11:35

New solid fully-a-periodic large pitch fibers with non-filamented core for high-power singlemode emission, Romain Dauliat^{1,2}, Aurélien Benoît¹, Dia Darwich¹, Jens Kobelke², Kay Schuster², Stephan Grimm², Raphaël Jamier¹, François Salin³, Philippe Roy¹; ¹*Laboratoire Xlim, USA*; ²*Optical fiber group, Leibniz Inst. for Photonic Tech., Germany*; ³*Eolite lasers, France*. We report on the first high power laser emission of a solid triple-clad fully-a-periodic large mode area fiber with non-filamented core based on Repusil process. The average power is 184 W with a singlemode fashion.

AW2A.3 • 11:47

CW and Q-switched tunable Neodymium fiber laser sources at short IR wavelengths near 900nm, Mathieu Laroche¹, Baptiste Leconte¹, Benoît Cadier², Hervé Gilles¹, Sylvain Girard¹, Thierry Robin²; ¹*CIMAP, France*; ²*ixfiber, France*. We report results on high-power and tunable three-level Nd-doped fiber lasers. Using a reflective VBG, laser wavelengths as short as 872 nm are achieved in CW regime with a narrow linewidth of 35 pm.

Invited

AW2A.4 • 11:59

Cladding-pumped Radially-polarized Fiber Lasers, W. Andrew Clarkson¹, Di Lin¹, Martynas Beresna¹, Peter Kazansky¹, Peter Shardlow¹; ¹*Univ. of Southampton, UK*. Direct excitation of the radially-polarized TM_{01} mode in cladding-pumped ytterbium-doped and thulium-doped fiber lasers using a novel mode selection scheme is reported. The prospects for scaling to very high power levels are discussed.

High Repetition Rate kJ-class Nanosecond to Femtosecond Lasers, Todd Ditmire^{1,2}, E Gaul^{1,2}, M. Martinez^{1,2}, S Feldman¹, M Donovan^{1,2}, W White¹, C Frederickson¹, W Grigsby¹, G Dyer^{1,2}, A Bernstein^{1,2}, J Norby³, Gilles Cheriaux⁴, J. P. Chambaret⁴, B Legarrec⁵, ¹National Energetics, USA; ²Center for High Energy Density Science, Univ. of Texas, USA; ³Continuum, USA; ⁴LOA-ENSTA, France; ⁵ELI-Beams, Czech Republic. Using novel liquid cooled slab laser amplifier Tech. we have developed laser systems capable of amplifying nanosecond laser pulses to energy of ~1 kJ at repetition rate up to 0.1 Hz. The design and performance of these liquid cooled amplifiers at 18 cm aperture will be described along with plans to scale this Tech. to larger aperture and higher repetition rate.

AW3A.2 • 14:10

Yb³⁺:YVO₄ Chirped Pulse Regenerative Amplifier, Alexander S. Rudenkov¹, Viktor E. Kisel¹, Vladimir Matrosov², Nikolai V. Kuleshov¹; ¹Center for Optical Materials and Technologies, Belarusian National Technical Univ., Belarus; ²Solix Ltd., Belarus. Yb:YVO₄ chirped pulse regenerative amplifier with 4.2W output power and 200fs-pulse duration at 200kHz repetition rate at central wavelength of 1018nm was demonstrated. A novel wavelength-independent off-axis pumping technique provided low quantum defect of 3.5%.

AW3A.3 • 14:22

Short-IR GW peak power OPCPA system with record average power at 100 kHz for high field physics, Yariv Shamir^{2,1}, Jan Rothhardt³, Steffen Hädrich^{2,3}, Stefan Demmler², Maxim Tschernajew², Jens Limpert^{2,3}, Andreas Tünnemann^{2,3}; ¹SNRC, Applied physics, Israel; ²Inst. of Applied Physics, Friedrich Schiller Univ., Germany; ³Helmholtz-Inst., Germany. We report on double-stage OPCPA system generated record short-IR average power of 7.5W and 6W at 1.5μm and 2μm respectively, with pulse durations of down to 33fs and GW-scale peak powers. Strategy for achieving multi-10 W of average power is discussed.

AW3A.4 • 14:34

Cascading of Coherent Pulse Stacking Using Multiple Gires-Tournois Interferometers, John Ruppe¹, Tong Zhou¹, Cheng Zhu¹, John Nees¹, Russell Wilcox², Almantas Galvanauskas¹; ¹Univ. of Michigan, USA; ²Lawrence Berkely National Lab, USA. Coherent pulse stacking utilizing cascaded Gires-Tournois interferometers to coherently stack multiple equal amplitude pulses in the time domain is experimentally demonstrated with a fiber chirped pulse amplification system.

AW3A.5 • 14:46

Single-stage Yb:YAG booster amplifier producing 2.3 mJ, 520 fs pulses at 10 kHz, Julien Pouysegur^{1,2}, Florent Guichard^{1,2}, Birgit Weichelt², Martin Delaigue², Yoann Zaouter², Clemens Hoenninger², Eric Mottay², Patrick Georges¹, Frederic P. Druon¹; ¹Institut d'Optique Graduate School, France; ²Amplitude Systemes, France. 520fs, 2.3-mJ pulses are demonstrated in a Yb:YAG booster amplifier delivering peak powers up to 4.4GW. To avoid damage and nonlinear-effect issues, passive divided pulse amplification is studied for the first time for bulk-amplifier.

AW3A.6 • 14:58

Development of a kW-level Picosecond Light Source Using Two-Stage Thin-Disk Regenerative Amplifier, Jiri Muzik^{1,2}, Martin Smrz¹, Taisuke Miura¹, Akira Endo¹, Vaclav Kubecek², Tomas Mocek¹; ¹HiLASE Center, Inst. of Physics CAS, Czech Republic; ²Faculty of Nuclear Sciences and Physical Engineering, Czech Technical Univ., Czech Republic. We report on a 100-kHz, 5-mJ picosecond system based on a two-stage thin-disk regenerative amplifier. With a compact ring cavity, we obtained 565 W with 46.7% optical-to-optical efficiency in continuous-wave operation without any sign of roll-over.

AW3A.7 • 15:10

Two-Channel Thin-Disk Laser for High Pulse Energy, Robert Jung¹, Johannes Tümmler¹, Thomas Nubbemeyer², Ingo Will¹; ¹Max Born Inst., Germany; ²LMU Munich, LEX Photonics, Germany. We report on a CPA system providing two synchronized pulses with more than 500 mJ, each. We also report on a special thin-disk ring amplifier that delivers 1 J pulse energy.

AW3A.8 • 15:22

160 mJ Energy, 100 Hz Repetition Rate Cryogenic Yb:YAG Composite Thin-Disk High Gain Amplifier, Michaël Hemmer¹, Luis Zapata¹, Fabian Reichert¹, Kelly Zapata¹, Anne-Laure Calendron², Kyung-Han Hong³, Huseyin Cankaya¹, Franz Kaertner^{1,3}; ¹DESY - Deutsches Elektronen Synchrotron, Germany; ²Dept. of Physics, Univ. of Hamburg, Germany; ³Dept. of Electrical Engineering, Massachusetts Inst. of Tech., USA. We report on a cryogenic composite thin-disk amplifier featuring ASE mitigation and 8-dB gain per bounce delivering up to 160 mJ energy diffraction-limited pulses with 5 ps transform-limited pulse duration at 100 Hz repetition rate.

AW3A.9 • 15:34

High power single crystal fiber amplifiers for linearly and cylindrically polarized picosecond lasers, Fabien Lesparre¹, Jean-Thomas Gomes¹, Xavier Delen¹, Igor Martial¹, Julien Didierjean², Wolfgang Pallmann³, Bojan Resan³, Michael Eckerle⁴, Thomas Graf¹, Marwan Abdou-Ahmed⁴, Frederic P. Druon¹, François Balembois¹, Patrick Georges¹; ¹Institut d'Optique Graduate School, France; ²FiberCryst, France; ³JDSU, Switzerland; ⁴IFSW, Germany. We demonstrated a three-stage diode-pumped Yb:YAG single-crystal-fiber amplifier to generate femtosecond pulses at high average powers with linear or cylindrical (i.e. radial or azimuthal) polarization.

AW4A • Mid-Infrared Sources II

Bunsen Hall (Bunsensaal)

Presider: Valentin Petrov, Max Born Inst., Germany

AW4A.1 • 16:15

High Average Power Fe:ZnSe and Cr:ZnSe Mid-IR Solid State Lasers, Sergey B. Mirov¹, Vladimir Fedorov¹, Dmitry Martyshev¹, Igor Moskalev¹, Mike Mirov¹, Sergey Vasilyev¹; ¹IPG Photonics, Mid-IR Lasers, USA. We report on novel design of tunable mid-IR Fe:ZnSe and Cr:ZnSe solid state lasers which provided significant increase of output average power up to 35W@4.1 μm and 57W@2.5 μm and 20W@2.94 μm .

AW4A.2 • 16:27

Octave-spanning Supercontinuum From As₂S₃-silica Double-nanospike Waveguide Pumped by Femtosecond Cr:ZnS Laser at 2.35 μm , Nikolai Tolstik^{1,2}, Shangran Xie³, Evgeni Sorokin², John C. Travers³, Johann Troles⁴, Philip S. Russell³, Irina T. Sorokina¹; ¹Dept. of physics, Norwegian Univ. of Science and Tech., Norway; ²Inst. for Photonics, Vienna Univ. of Tech., Austria; ³Max Planck Inst. for the Science of Light, Germany; ⁴Universite de Rennes I, France. We generate a 1.2 to 3.6 μm supercontinuum using a As₂S₃-silica double-nanospike waveguide pumped by femtosecond Cr:ZnS laser. Varying the core diameter allows the group velocity dispersion to be fine-tuned, thus maximizing supercontinuum bandwidth.

AW4A.3 • 16:39

Mid-IR Kerr-Lens Mode-Locked Polycrystalline Cr²⁺:ZnS Laser with 0.5 MW Peak Power, Sergey Vasilyev¹, Mike Mirov¹, Valentin Gapontsev²; ¹IPG Photonics Corp., Mid-IR Lasers, USA; ²IPG Photonics Corporation, USA. We report femtosecond polycrystalline Cr²⁺:ZnS laser at 2.4 μm central wavelength with 41 fs pulse duration, 1.9 W average power and 79 MHz pulse repetition rate that corresponds to 0.5 MW peak optical power.

AW4A.4 • 16:51

All-Fiber, Single-Mode Spectral Beam Combining of High Power Tm-Doped Fiber Lasers, Sinem Yilmaz¹, Christoph Ottenhues², Mateusz Wyszomolka², Thomas Theeg², Samir Lamrini³, Carsten Scholle³, Peter Fuhrberg³, Hakan Sayinc², F Omer Ilday^{1,4}, Jörg Neumann², Ludger Overmeyer⁵, Dietmar Kracht²; ¹Physics Dept., Bilkent Univ., USA; ²Laser Development, Laser Zentrum Hannover e.v., Germany; ³Lisa Laser Product, Germany; ⁴Dept. of Electrical and Electronics Engineering, Bilkent Univ., Turkey; ⁵Institut für Transport und Automatisierungstechnik, Germany. We demonstrate an all-fiber integrated dual-wavelength Tm-doped fiber laser with an output power of 36 W by using the spectral beam combining method. In-house-made WDM is used for combination of TM-doped fiber lasers with different wavelengths while maintaining the single mode beam quality.

AW4A.5 • 17:03

Multi-Wavelength, Narrow Bandwidth Diode Lasers for Power Scaling of Resonantly Pumped Er:YAG Lasers, Haro Fritsche^{1,2}, Oliver Lux¹, Martin Gärtner¹, Andreas Grohe², Wolfgang Gries², Hans-Joachim Eichler¹; ¹Technical Univ. of Berlin, Germany; ²R&D, DirectPhotonics Industries, Germany. Eye-safe laser operation is realized by a resonantly pumped Er:YAG laser emitting at 1645 nm. The application of a multi-wavelength, narrow bandwidth diode lasers as pump sources allows for high optical efficiency of 48%.

AW4A.6 • 17:15

Nonlinear compression of ultrashort pulses from a high repetition rate Tm-doped fiber laser to sub-5 cycle duration, Martin Gebhardt^{1,2}, Christian Gaida¹, Fabian Stutzki¹, Steffen Hädrich^{1,2}, Cesar Jauregui¹, Jens Limpert^{1,2}, Andreas Tünnermann^{3,1}; ¹Inst. of Applied Physics, USA; ²Helmholtz-Inst. Jena, Germany; ³Fraunhofer Inst. for Applied Optics and Precision Engineering, Germany. We present nonlinear pulse compression in the wavelength region around 2 μm using two different approaches. Pulse-shortening to sub-30 fs at 26.5 W of average power or 200 MW peak power is presented, respectively.

AW4A.7 • 17:27

Single-Frequency Q-Switched Operation of a Resonantly Pumped Ho:KY₃F₁₀ Laser With a Twisted Mode Cavity Using Prelase Control, Martin Schellhorn¹, Christoph Bollig², Daniela Parisi³, Mauro Tonelli³, Marc Eichhorn¹; ¹ISL, French-German Research Inst., France; ²Abacus Laser, Germany; ³NEST-Istituto Nanoscienze-CNR, Italy. We report on a Q-switched Ho:KY₃F₁₀ laser with a twisted mode cavity. Using prelase control, single-longitudinal-mode laser output at 1, 2, 5, and 10 kHz was obtained, with a maximum average power of 6.1 W.

AW4A.8 • 17:39

8 mJ, 1 kHz, Picosecond Ho:YLF Regenerative Amplifier, Lorenz von Grafenstein¹, Martin Bock¹, Uwe Griebner¹, Thomas Elsaesser¹; ¹Max Born Inst., Germany. High-gain, continuous-wave pumped Ho:YLF regenerative amplifiers are reported, delivering up to 8 mJ picosecond pulses at 2050 nm, with energy fluctuations of the 1 kHz pulse train as low as 2% rms.

AW4A.9 • 17:51

Compact Fiber Based 2.05 μm All-PM CPA System at 1 MHz and 1 MW Peak Power, Heinar Hoogland^{1,2}, Ronald Holzwarth^{1,3}; ¹Menlo Systems GmbH, Germany; ²Dept. of Physics, Univ. of Erlangen-Nuremberg, Germany; ³Max-Planck-Inst. of Quantum Optics, Germany. We report on an oscillator seeded all-PM fiber based 2.05 μm CPA system emitting 371 fs pulses at 0.95 MHz and 1.1 MW peak power without the need of LMA amplifier or complex temporal management.

AW4A.10 • 18:03

Mid-IR Supercontinuum Generation in ZBLAN Fibers with High Output Power and High Conversion Efficiency, Christian Kneis^{4,1}, Thierry Robin², Benoît Cadier², Franck Joulain³, Marcel Poulain³, Inka Manek-Hönninger¹, Marc Eichhorn⁴, Christelle Kieleck⁴; ¹Centre Lasers Intenses et Applications (CELIA), Univ. of Bordeaux, France; ²iXFiber, France; ³Le Verre Fluoré, France; ⁴French-German Research Inst. ISL, France. Supercontinuum generation is performed in ZrF₄-BaF₂-LaF₃-AlF₃-NaF (ZBLAN) fibers pumped by a thulium (Tm³⁺)-doped silica fiber laser, which is simultaneously actively Q-switched and actively mode-locked. High power operation and efficient broadening towards the mid-IR wavelength region is presented.

Ath1A • Sensing, Spectrometry and Waveguiding

Bunsen Hall (Bunsensaal)

Presider: Dieter Hoffmann, Fraunhofer Inst. for Laser Tech, Germany

Thursday, 8 October

Ath1A.1 • 08:00

Invited

Fiber-Based Laser Transmitter Tech. at 1.57 μm for Atmospheric Carbon Dioxide Satellite Remote Sensing, Anthony W. Yu¹, James B. Abshire¹, Mark Stephen¹, Jeffrey R. Chen¹, Stewart Wu¹, Brayler Gonzalez¹, Lawrence Han¹, Kenji Numata², Graham R. Allan³, William Hasselbrack³, Jeffrey W. Nicholson⁴, Man Yan⁴, Patrick Wisk⁴, Anthony DeSantolo⁴, Brian Mangan⁴, Gabe Puc⁴, Doruk Engin⁵, Brian Mathason⁵, Mark Storm⁵; ¹NASA Goddard Space Flight C, USA; ²Univ. of Maryland, USA; ³Sigma Space Corporation, USA; ⁴OFS, USA; ⁵Fibertek inc, USA. In this paper we will review our progress on maturing the Tech. and improving the technical readiness of a fiber-based laser transmitter at 1.57 μm for use in atmospheric carbon dioxide (CO2) satellite remote-sensing.

Ath1A.2 • 08:20

Invited

Development and First Results of A New Near-ir Airborne Greenhouse Gas Lidar, Andreas Fix¹, Axel Amediek¹, Christian Büdenbender¹, Gerhard Ehret¹, Mathieu Quatrevalet¹, Martin Wirth¹, Jens Löhning², Raphael Kasemann², Jürgen Klein², Dieter Hoffmann², Volker Klein³; ¹Deutsches Zentrum für Luft- und Raumfahrt (DLR), Institut für Physik der Atmosphäre, Germany; ²Fraunhofer Institut für Lasertechnik (ILT), Germany; ³OHB-System AG, Germany. An airborne lidar system has been developed to measure columns of the two most important anthropogenic greenhouse gases, CO2 and methane. Results from the first deployment onboard the German research aircraft HALO are presented.

Ath1A.3 • 08:40

Invited

Ultra-Fast Laser Beam Delivery and Pulse Compression with Kagome Hollow-core Pcf, Fetah Benabid¹; ¹Xlim Research Institute, France. We review the recent progress on ultra-short pulse laser beam delivery and compression using hypocycloid-shaped core-contour (i.e. negative curvature) hollow-core photonic-crystal-fibre.

Ath1A.4 • 09:00

Invited

Ion Migration Assisted Femtosecond Laser Writing of Refractive Structures, Javier Solis¹; ¹Instituto de Optica-CSIC, Spain. In this presentation we will review our recent results regarding ion migration processes induced by fs-laser irradiation of glasses and the production of light guiding structures based on this effect.

Ath1A.5 • 09:20

Dual-Comb Spectrometer for Direct Phase Spectroscopy of Greenhouse Gases across an Open Air Path, Esther Baumann¹, Fabrizio R. Giorgetta¹, Greg B. Rieker², Laura C. Sinclair¹, Ian Coddington¹, William C. Swann¹, Nathan R. Newbury¹; ¹NIST, USA; ²Univ. of Colorado, USA. Direct phase spectroscopy of greenhouse gases over a turbulent open air path is reported. The intrinsic fast up-date rate of a dual-comb spectrometer makes it possible to obtain molecular phase spectra at 0.6 mrad level.

Ath1A.6 • 09:32

Femtosecond-Level Synchronization of Clocks across a turbulent open-path link, Fabrizio R. Giorgetta¹, Jean-Daniel Deschenes², Laura C. Sinclair¹, William C. Swann¹, Esther Baumann¹, Ian Coddington¹, Nathan R. Newbury¹; ¹NIST, USA; ²Universite Laval, Canada. We show time synchronization between two optical oscillators to less than ±20 fs over 50 hours over a turbulent 4 km open-path link. Synchronization is retained even in the case of link interruptions.

Ath1A.7 • 09:44

Characterizing the Carrier-Envelope Offset in an Optical Frequency Comb without Direct Detection, Pierre Brochard¹, Stephane Schilt¹, Valentin J. Wittwer¹, Thomas Sudmeyer¹; ¹Univ. of Neuchatel, Switzerland. We present a new method to measure CEO frequency noise and modulation response and obtain excellent agreement with the standard f-to-2f method for a commercial fiber comb. Future applications include semiconductor, micro-resonator, and GHz-laser comb characterization.

Ath1A.8 • 09:56

Tunable 1.9μm Laser System for Mid-IR Upconversion Detection, Rasmus Pedersen¹, Peter Tidemand-Lichtenberg¹, Lasse Høgstedt¹; ¹Technical Univ. of Denmark, Denmark. A tunable 1.9μm Tm:YLF laser was built for low noise infrared up conversion imaging and spectroscopy. Its noise properties are compared to that obtained using a 1064nm mixing laser, focusing on spontaneous parametric down conversion generated noise.

Horizontal lines for notes or additional information.

ATH2A.1 • Mandelstam-Brillouin Mirrors for Chirped Pulse Fiber Laser Networks., Alex Okulov¹; ¹Russian Academy of Sciences, Russia. Phase conjugating Brillouin mirrors are well suited for phase-locking of multi-channel lasers. We study possibility of a single beam chirped pulse output from a bundle of large mode area photonic crystal Yb fiber amplifiers.

ATH2A.2 • Laser Ignition of an Automobile Engine by a High-Peak Power Nd:YAG/Cr⁴⁺:YAG Laser, Nicolaie I. Pavel¹, Traian Dascalu¹, Mihai Dinca², Gabriela Salamu¹, Nicolae Boicea³, Adrian Birtas³; ¹Lab of Solid-State Quantum Electronics, National Inst. for Laser, Plasma and Radiation Physics, Romania; ²Univ. of Bucharest, Faculty of Physics, Romania; ³Renault Technologie Roumanie, Romania. High-peak power passively Q-switched Nd:YAG/Cr⁴⁺:YAG lasers were employed to operate the engine of a Renault automobile. Improved engine stability and decreased CO and HC emissions were measured in comparison with ignition by electrical spark plugs.

ATH2A.3 • Performance Analysis of Adaptive Compensation Techniques in Satellite-to-Ground Coherent Laser Communication Links, Siyuan Yu¹, Fangdi Bao¹, Zhongtian Ma¹, Jing Ma¹, Liying Tan¹; ¹Harbin Inst. of Tech., China. In this paper, we try to derive exact expressions for the probability density function of the mixing efficiency in the presence of turbulence. The distribution of the mixing efficiency is given in different phase residual variance after using adaptive compensation techniques (ACT).

ATH2A.4 • Mid-IR Laser System for Muonic-Hydrogen Spectroscopy, Lyubomir I. Stoychev^{2,1}, Miltcho B. Danailov³, Alexander Demidovich³, Ivaylo Nikolov³, Dimitar Bakalov⁴, Andrea Vacchi^{2,5}; ¹Abdus Salam Int'l Ctr Theoretical Physics, Italy; ²Istituto Nazionale di Fisica Nucleare, sezione Trieste, Italy; ³Elettra-Sincrotrone Trieste S.C.p.A, Italy; ⁴Inst. for Nuclear Research and Nuclear Energy, Bulgaria; ⁵Mathematics and Informatics Department, Udine Univ., Italy. A laser system based on difference frequency generation in non-oxide nonlinear crystals (LiInS₂) emitting narrow linewidth mid-IR radiation at ~ 6.8 μm is presented. The system is developed as a prototype of the laser system needed for the purposes of muonic-hydrogen spectroscopy.

ATH2A.5 • Field-of-View Enhancement in Infrared-to-Visible Up-Conversion of Images Illuminated by an ASE Source, Adrian J. Torregrosa¹, Haroldo Maestre¹, Maria Luisa Rico², Juan Capmany¹; ¹Miguel Hernandez Univ., Spain; ²Univ. of Alicante, Spain. We propose the use of incoherent ASE illumination to enhance the field of view of up-converted images illuminated in the infrared as compared with the use of narrow-band laser illumination.

ATH2A.6 • Development of Nd:YAG for efficient Lyman-α generation, Satoshi Wada¹, Takayo Ogawa¹, Norihito Saito¹, Yoshiharu Urata¹, Yu Oishi¹, Koji Miyazaki¹, Kotaro Okamura¹, Masahiko Iwasaki¹; ¹RIKEN, Japan. We have developed Nd:YAG for amplification at 1062.78nm. The fifth harmonics generation was used for two photon resonant four-wave mixing in Kr gas. Efficient Lyman-α generation at 122nm was successfully demonstrated. Efficiency reached to 3x10⁻³.

ATH2A.7 • Progress In The Development Of Kilowatt-class Diode Laser Bars For Pump Applications, Agnieszka Pietrzak¹, Martin W. Woelzl¹, Ralf Huelsewede¹, Martin Zorn¹, Olaf Hirssekorn¹, Jens Meusel³, Alex Kindsvater³, Matthias Schröder³, Veit Bluemel³, Juergen Sebastian¹, Carlo Frevert², Frank Bugge², Steffen Knigge², Arnim Ginolas², Goetz Erbert², Paul Crump²; ¹JENOPTIK Diode Lab GmbH, Germany; ²Ferdinand-Braun-Institut, Leibniz-Institut für Höchstfrequenztechnik, Germany; ³JENOPTIK Laser GmbH, Germany. Progress in diode laser pump bars is presented. Powers above 1kW per bar are confirmed at 880nm, and 940...980nm, with operating efficiency ~50%. Operation at 200K increases the efficiency at 1kW to >60%.

ATH2A.8 • Spectroscopic and Laser Properties of Tm³⁺ Ions Optical Centers in CaF₂ Crystal at ³F₄-³H₆ Transition Under 795 nm Diode Laser Excitation., Maxim E. Doroshenko¹, Olimkhon Alimov¹, Alexander Papashvili¹, Kseniya Martynova¹, Vasilii Konyushkin¹, Andrei Nakladov¹, Vyacheslav Osiko¹; ¹A.M. Prokhorov General Physics Inst RAS, Russia. The dynamics of Tm³⁺ optical centers formation with increasing concentration and the influence of different optical centers on the fluorescence and laser properties of the 2-mm ³F₄-³H₆ transition under ~795 nm laser diode excitation is studied.

ATH2A.9 • Luminescence-Z-scan, Tomaz Catunda¹, Tarcio Vieira¹; ¹USP Inst de Fisica de Sao Carlos, Brazil. The Luminescence Z-scan technique is introduced for the determination of the pump saturation intensities and up-conversion losses. Results are presented for Cr³⁺:Al₂O₃, Cr³⁺:YAG and Nd³⁺:YAG.

ATH2A.10 • Passive Q-switching Of A Diode-pumped Pr:LiYF₄ Visible Laser Using WS₂ As Saturable Absorber, Yongjie Cheng¹, Han Yang¹, Bin Xu¹, Huiying Xu¹, Zhiping Cai¹, Richard Moncorge²; ¹Xiamen Univ., China; ²Université de Caen, France. Stable Q-switched laser operation (0.25 μJ, 630 ns, 88 kHz) of a diode-pumped Pr:LiYF₄ laser is obtained at 640nm by using a tungsten disulfide (WS₂) solid-state nanosheet material as saturable absorber.

ATH2A.11 • Sub-nanosecond Tm:KLuW Microchip Laser Q-switched by a Cr:ZnS Saturable Absorber, Pavel Loiko^{1,2}, Josep Maria Serres², Xavier Mateos², Konstantin V. Yumashev¹, Anatol S. Yasukevich¹, Uwe Griebner³, Valentin Petrov³, Magdalena Aguiló², Francesc Diaz²; ¹Center for Optical Materials and Technologies, Belarusian National Technical Univ., Belarus; ²FiCMA-FiCNA, Universitat Rovira i Virgili, Spain; ³Max Born Inst. for Non-linear Optics and Short Pulse Spectroscopy, Germany. A Tm:KLu(WO₄)₂ microchip laser Q-switched by a Cr²⁺:ZnS saturable absorber generates 780 ps / 26 μJ pulses at 1846.6 nm. The maximum output power is 146 mW with a slope efficiency of 21%.

ATH2A.12 • High Order Hermit-Gaussian Mode Passively Q-Switched Nd:YVO₄ Microchip Laser, Jun Dong¹, Yu He¹, Shengchuang Bai¹; ¹Xiamen Univ., China. Versatile high order Hermit-Gaussian mode lasers with peak power of over 720 W have been generated in passively Q-switched Nd:YVO₄ microchip laser by applying tilted large pump beam diameter incident on Nd:YVO₄ crystal.

ATH2A.13 • Microchip Laser Operation of Yb:YCOB Crystals, Xavier Mateos^{1,2}, Josep Maria Serres¹, Pavel Loiko³, Hao Hai Yu⁴, Huaijin Zhang⁴, Junhai Liu⁵, Konstantin V. Yumashev³, Uwe Griebner², Valentin Petrov², Magdalena Aguiló¹, Francesc Diaz¹; ¹Universitat Rovira i Virgili, Spain; ²Max Born Inst., Germany; ³Center for Optical Materials and Technologies, Belarusian National Technical Univ., Belarus; ⁴Shandong Univ., China; ⁵Qingdao Univ., China. Microchip lasers are realized with Yb:YCOB crystals cut along the optical indicatrix axes. Using a Z-cut crystal, a maximum output power of 8.35 W is achieved at ~1040 nm with a slope efficiency of 70%.

ATH2A.14 • Laser Characteristics of Nd:YAG/diamond and Nd:YVO₄/diamond Composite Devices Fabricated with the Room-temperature-bonding Technique, Ichiro Shoji¹, Yohei Okuyama¹, Hiromasa Ichikawa¹, Yoshimi Ariga¹, Tomomi Onda¹; ¹Chuo Univ., Japan. We have developed Nd:YAG/diamond and Nd:YVO₄/diamond composites using the room-temperature-bonding technique. Higher-power operation at higher pump power is possible for the composites than for non-composites, in spite of the Fresnel loss at the bonded interfaces.

ATH2A.15 • Optimization of diode-side-pumped, passively Q-switched Yb:LuAG slab laser, Mateusz Kaskow¹, Jan K. Jabczynski¹, Waldemar Zenzian¹, Jan Sulc², Michal Nemeč², Helena Jelinkova²; ¹Inst. of Optoelectronics, Military Univ. of Tech., Poland; ²Faculty of Nuclear Sciences and Physical Engineering, Czech Technical Univ., Czech Republic. We demonstrate optimization of passively Q-switched Yb:LuAG laser. Pulse energy of 10.1 mJ corresponding to peak power of 2.5 MW was achieved. Above 100 mJ with 23% efficiency in free-running operation was obtained.

ATH2A.16 • High Gain Broadband Yb:CaF₂ Booster Amplifier Pumped by a 976 nm High Power Fiber Laser, Pierre Sevillano^{1,2}, Patrice Camy³, Jean-Louis Doualan³, Jens Limpert⁴, Richard Moncorge³, Dominique Descamps¹, Eric Cormier¹; ¹Université de Bordeaux I, France; ²CEA, France; ³Université de Caen, France; ⁴Friedrich Schiller Univ. Jena, France. We demonstrate a broadband booster amplifier operating at 96 MHz based on a 29 mm Yb:CaF₂ crystal pumped by a fiber laser at 976 nm. Pulses as short as 70 fs have been directly amplified up to 16.5 W in a single-pass configuration with 34 % efficiently and an optical gain of 5.7.

ATH2A.17 • Continuous yellow-orange laser based on a diode-side-pumped Nd³⁺:YVO₄ self-Raman laser, Cristine C. Kores¹, Jonas Jakutis Neto², Helen M. Pask³, Niklaus U. Wetter¹; ¹Centro de Lasers e Aplicações - IPEN/SP, Brazil; ²Instituto de Estudos Avançados - IEAv, Brazil; ³Macquarie Univ., Australia. In this work we report the operation of the first diode-side-pumped continuous-wave (cw) self-Raman laser at 588 nm. The very cost-effective design allows for efficient stimulated Raman scattering using a grazing incidence configuration.

Ath2A.18 • Dual-Wavelength Eye-Safe Generation in a Diode-Pumped Nd:YAP Raman Laser, Yu-Jen Huang¹, Kuan-Wei Su¹, Yung-Fu Chen^{1,2}, Weidong Chen³, Ge Zhang³; ¹Dept. of Electrophysics, National Chiao Tung Univ., Taiwan; ²Dept. of Electronics Engineering, National Chiao Tung Univ., Taiwan; ³Key Lab of Optoelectronic Materials Chemistry and Physics, Fujian Inst. of Research on the Structure of Matter, Chinese Academy of Sciences, China. A compact efficient dual-wavelength eye-safe Nd:YAP Raman laser at 1478 (1474) and 1503 (1480) nm is originally demonstrated based on simultaneous excitations of the cascaded 267-(233) cm^{-1} mode and the 694- (671) cm^{-1} shift in the KTP (KTA) crystal.

Ath2A.19 • Intracavity-Pumped, Cascaded Mid-IR Optical Parametric Oscillator Based on AgGaSe₂, Andrey Boyko^{1,3}, Georgi Marchev², Valentin Petrov², Valdas Pasiskevicius⁴, Dmitry Kolker¹, Andrius Zukauskas⁴, Nadezhda Kostyukova^{3,1}; ¹Novosibirsk State Univ., Russia; ²Max Born Inst., Germany; ³Special Technologies, Ltd., Russia; ⁴Royal Inst. of Tech., Sweden. We report on an AgGaSe₂ optical parametric oscillator (OPO), intracavity pumped by the 1.85- μm signal pulses from a 1.064- μm pumped Rb:PPKTP OPO. It operates at 100 Hz with idler tunability from 5.8 to 8.3 μm .

Ath2A.20 • Tm:YAP Pumped Intracavity Pulsed OPO Based on Orientation-Patterned Gallium Arsenide (OP-GaAs), Daniel Kane^{1,2}, John-Mark Hopkins¹, Malcolm Dunn³, Peter G. Schunemann⁴, David J. Stothard¹; ¹Fraunhofer CAP, UK; ²Univ. of Strathclyde, UK; ³Univ. of St Andrews, UK; ⁴BAE Systems Inc., USA. We present a long-wavelength singly-resonant optical parametric oscillator (OPO) based upon orientation-patterned gallium arsenide (OP-GaAs) pumped internal to a high-repetition-rate, Q-switched Tm:YAP laser. We demonstrate up to 120mW of extracted idler and tuning from 2.5-6.8 μm .

Ath2A.21 • Numerical Investigation of Coherent Mid-infrared Supercontinuum Generation in Tapered Chalcogenide Fibers, Lai Liu¹, Yasutake Ohishi¹, Takenobu Suzuki¹, Kenshiro Nagasaka¹; ¹Toyota Technological Inst., Japan. The coherence property of mid-infrared supercontinuum generation in a tapered chalcogenide step-index fiber pumped by a 4 μm femtosecond laser is numerically investigated by using the complex degree of coherence and second order coherence theory.

Ath2A.22 • Continuum generation in the 2 microns wavelength interval using high-order mode propagation, Stefano Taccheo¹, Cosimo D'Andrea², Ilaria Bargigia³, Silvia Soria⁴, Jens Kobelke⁵, Kay Schuster⁶; ¹Swansea Univ - Coll Engin, UK; ²Politecnico di Milano, Italy; ³IIT, Italy; ⁴IFAC CNR, Italy; ⁵PHOT, Germany. We demonstrate efficient continuum generation in the 2 micron wavelength interval using a new scheme of off-axis pumping and high-order mode propagation in a photonic crystal fiber pumped at around 780 nm.

Ath2A.23 • Determination of Thermal Load from Core Temperature Measurements in Single Mode Ytterbium-Doped Fiber Amplifiers, Franz Beier^{1,2}, Matthias Heinzig¹, Till Walbaum¹, Stefan Kuhn¹, Christian Hupe¹, Nicoletta Haarlammer¹, Thomas Schreiber¹, Ramona Eberhardt¹, Andreas Tünnermann^{1,2}; ¹Precision Engineering, Fraunhofer Inst. for Applied Optics and Precision Engineering, Germany; ²Inst. of Applied Physics, Germany. In this contribution we demonstrate an approach to determine the longitudinal resolved thermal load in the core of an ytterbium-doped amplifier-fiber. The temperature distribution was measured by an OFDR in a single-mode amplifier in operation.

Ath2A.24 • Mode Instabilities in High-Power Bidirectional Fiber Amplifiers and Lasers, Cesar Jauregui¹, Hans J. Otto¹, Jens Limpert¹, Andreas Tünnermann^{2,1}; ¹Friedrich-Schiller-Universität Jena, Germany; ²Fraunhofer Inst. for Applied Optics and Precision Engineering, Germany. In this contribution we present the first study on the behavior of the mode instability threshold in bidirectional fiber amplifiers and lasers taking into account the impact of photodarkening.

Ath2A.25 • Pump beam propagation and absorption distribution in single crystal fibers, Xavier Delen¹, Adrien Aubourg^{1,2}, François Balembois¹, Patrick Georges¹; ¹Institut d'Optique Graduate School, France; ²Laboratoire Photonique Numérique et Nanosciences, France. This paper presents numerical simulations and experimental results about the propagation of highly multi-mode pump beams in single crystal fibers. Pump to signal overlap is also quantified taking into account saturation effects.

Ath2A.26 • 547 kHz repetition rate all-fiber mode-locked laser delivering picoseconds pulse at 1 μm wavelength, Simon Boivin^{1,2}, Yves Hernandez¹, Jean-Bernard Lecourt¹, Marc Wuilpart², Andrei Fotiadis², Patrice Mégret²; ¹Applied Photonics Dept., Multitel, Belgium; ²Electromagnetism and Telecommunication Dept., Faculty of Engineering, Univ. of Mons, Belgium. An all-PM fiber mode-locked oscillator delivering directly 14.2 ps pulse duration at 547 kHz is reported. The laser is based on nonlinear polarization evolution in birefringent fiber and uses an electronic all-PM polarization controller.

Ath2A.27 • High energy sub-nanosecond thulium-doped all-fibre laser based on a rod-type photonic-crystal fibre amplifier, Sebastian Guillemet¹, Yves Hernandez¹, Dirk Mortag², Frithjof Haxsen², Andreas Wienke², Dieter Wandt², Lasse Leick³, Wolfgang Richter⁴; ¹Multitel, Belgium; ²Laser Zentrum Hannover, Germany; ³NKT Photonics, Denmark; ⁴Batop, Germany. We report a thulium-doped fibre amplified mode-lock laser at 1950 nm using a large mode area rod-type PCF for reaching up to 120 μJ energy at 50 kHz repetition rate and 520 ps pulses duration.

Ath2A.28 • Optimization of a Diode-Pumped Thulium Fiber Laser with a Monolithic Cavity towards 278 W at 1967 nm, Till Walbaum¹, Matthias Heinzig¹, Andreas Liem¹, Thomas Schreiber¹, Ramona Eberhardt¹, Andreas Tünnermann¹; ¹Fraunhofer Inst. for Applied Optics and Precision Engineering, Germany. We present a thulium fiber laser with a monolithic cavity emitting at 1967 nm. The output power of 278 W is the highest presented so far for a diode-pumped thulium fiber laser below 2 μm .

Ath2A.29 • Discretely tunable Tm-doped fiber laser using FBG arrays as spectral filters, Tobias Tiess¹, Saher Junaid¹, Martin Becker¹, Sonja Unger¹, Manfred Rothhardt¹, Hartmut Bartelt^{1,2}, Matthias Jäger¹; ¹Fiber Optics, Leibniz Inst. of Photonic Tech., Germany; ²Abbe Center of Photonics, Germany. We present two configurations of a discretely tunable Thulium-doped fiber laser using FBG arrays as versatile spectral filters for tailored tuning ranges. With pulses in the nanosecond regime, a tuning range of 84nm has been realized.

Ath2A.30 • Q-switched Nd:YAG laser at 946 nm based on single crystal fiber pumped at 885 nm, Jean-Thomas Gomes¹, Xavier Delen¹, Igor Martial², Julien Didierjean², François Balembois¹, Patrick Georges¹; ¹Laboratoire Charles Fabry, USA; ²FiberCryst SAS, France. We report on a 946nm Q-switched oscillator based on Nd:YAG single crystal fiber. We demonstrate 15W, 40kHz, 51ns pulses and a maximum average power of 28.4W in continuous regime with a M² under 1.3.

Ath2A.31 • Enhancement of Fundamental Mode Third Harmonic Generation Efficiency in Microfibres, Xiujuan Jiang^{1,2}, Timothy Lee², Zhanbiao Wei¹, Yifan Tang¹, Gilberto Brambilla²; ¹School of Electro-mechanical Engineering, Guangdong Univ. of Tech., China; ²Optoelectronics Research Centre, Univ. of Southampton, UK. We present a scheme to generate the third harmonic in the fundamental mode using microfibres, by introducing a counter-propagating pump field to partly compensate the phase mismatch and thus enhance the harmonic conversion efficiency.

Ath2A.32 • High Power Fiber Laser Delivering Pulses with Arbitrary Duration and Repetition Rate, Rok Petkovsek¹, Vid Novak², Vid Agrez¹, Bostjan Podobnik²; ¹Univ. of Ljubljana, Slovenia; ²LPKF, Slovenia. MOPA fiber laser capable of delivering pulses on demand having arbitrary duration at high modulation bandwidth is presented. The laser features a dual wavelength seed source and a double stage YDF amplifier.

Ath2A.33 • Hybrid Fiber/Solid-State Picosecond Pulse Burst Laser with Diffraction-Limited Beam Quality in the Deep Ultraviolet, Vincent Roy¹, Louis Desbiens¹, Yves Taillon¹; ¹Institut National d'Optique, Canada. Picosecond pulse bursts generated by an Yb-doped fiber laser are further amplified up to the mJ level in an Nd-doped vanadate amplifier. Highly efficient frequency tripling (38%) and quadrupling (23%) in lithium triborate crystals is shown to yield near diffraction-limited beam quality (M² < 1.2).

Ath2A.34 • Influence of Pump Noise on Mode-locked Fiber Oscillators, Parviz Elahi¹, Tesfay G Teamir¹, Levent Budunoglu¹, Kutun Gurel¹, F Omer Ilday^{1,2}; ¹Physics Dept., Bilkent Universitesi, Turkey; ²Electrical and Electronics, Bilkent Univ., Turkey. Pump modulation transfer function and its dependence on pump power are investigated for all normal dispersion, dispersion managed and soliton-like mode-locked oscillator both in experiment and simulation.

ATH2A.35 • Study of nanosecond polarization maintaining Ytterbium-doped fiber amplifier in pulsed pump regime, Gabriel Amiard-Hudebine^{1,2}, Guillaume Tison^{1,2}, Eric Freysz^{1,2}; ¹Université de Bordeaux, France; ²CNRS-UMR 5798, France. Nanosecond pulses are amplified from 5 μ J to 230 μ J at 1064 nm in a short LMA-PM-Yb-doped fiber pumped at 915 nm. Experimental limitations introduced by pulsed-pump, ASE and nonlinear effects agree with our numerical simulations.

ATH2A.36 • Subpicosecond Diode-pumped Nd:Y-codoped:SrF₂ Laser, Vaclav Kubecek¹, Michal Jelinek¹, Miroslav Cech¹, David Vyhliadal¹, Liangbi Su², Dapeng Jiang², Fengkai Ma², Xiaobo Qian², Jingya Wang², Jun Xu²; ¹Czech Technical Univ. in Prague, Czech Republic; ²Shanghai Inst. of Ceramics, China. Passively mode-locked operation of a Nd:Y:SrF₂ laser pumped by low power laser diode at 796nm is reported. The continuous train of 0.9 ps long pulses with total output power of 80 mW at repetition rate of 142 MHz was generated.

ATH2A.37 • Pulsed Diode Side-pumped Mode-locked Nd:YVO₄ Laser in Double-bounce Configuration, Jitka Cernohorska¹, Michal Jelinek¹, David Vyhliadal¹, Vaclav Kubecek¹; ¹Czech Technical Univ. in Prague, Czech Republic. Passively mode-locked Nd:YVO₄ laser in the double-bounce grazing-incidence geometry under pulsed diode-pumping is presented. Q-switched pulse-trains of 16 ps pulses at 1.06 μ m were generated at repetition rate of 50Hz with low timing jitter of 140ns.

ATH2A.38 • Passively Mode-locked 2 μ m Bulk Laser with > 1 Watt Output, Kejian Yang¹, Tianli Feng¹, Shengzhi Zhao¹, Thomas Dekorsy², Lihe Zheng³, Jun Xu³; ¹Shandong Univ., China; ²Konstanz Univ., Germany; ³Shanghai Inst. of Ceramics, China. In this paper, we reported a passively mode-locked 2 μ m bulk laser with >1 W output. A maximum laser output power exceeding 1.2 W with a minimum pulse duration of 38.4 ps was achieved around 2 μ m.

ATH2A.39 • Comparison Between Tm:YAP and Ho:YAG Ultrashort Pulse Regenerative Amplification, Andreas Wienke¹, Dieter Wandt¹, Uwe Morgner^{1,2}, Jörg Neumann¹, Dietmar Kracht¹; ¹Laser Zentrum Hannover e.V., Germany; ²Institut für Quantenoptik, Leibniz Universität Hannover, Germany. We compare the performance characteristics of Tm:YAP and Ho:YAG in ultrashort pulse regenerative amplification. Both systems follow the same amplification concept and use nearly the same experimental setup reaching similar output energies of >700 μ J.

ATH2A.40 • $\chi^{(2)}$ -Lens Mode-Locking of a Yb:YAG Laser Using Intracavity SHG in a LBO crystal, Veselin S. Aleksandrov¹, Hristo Iliev², Ivan Buchvarov¹; ¹Sofia Univ. St. Kliment Ohridski, Bulgaria; ²IBPhotonics Ltd., Bulgaria. We demonstrate a diode-pumped Yb:YAG laser mode-locked by intra-cavity $\chi^{(2)}$ -lens formation in a LBO crystal. Stable operation is achieved with output power of 260 mW, pulse duration of 1.4 ps at 105 MHz repetition rate.

ATH2A.41 • Total Self-Mode-Locking of Multi-Pass Geometric Modes Localized on Hyperbolic Caustics in Diode-Pumped Nd:YVO₄ Lasers, Jung-Chen Tung¹, P. H. Tuan¹, Hsing-Chih Liang², Kuan-Wei Su¹, Kai-Feng Huang¹, Yung-Fu Chen¹; ¹National Chiao Tung Univ., Taiwan; ²National Taiwan Ocean Univ., Taiwan. We experimentally explore simultaneous self-phase-locking of longitudinal and transverse modes in a diode-pumped Nd:YVO₄ laser with off-axis pumping. The mode-locked states produce wave packets traveling along ray paths localized on hyperbolic caustics in degenerate cavities.

ATH2A.42 • High-power self-mode-locked Nd:YVO₄ laser at wavelength of 1342 nm with simultaneously orthogonal polarizations, Hsing-Chih Liang¹, Tai-Wei Wu², Chia-Han Tsou², Yung-Fu Chen²; ¹National Taiwan Ocean Univ., Taiwan; ²National Chiao Tung University, Taiwan. We demonstrate an orthogonally polarized dual-comb Nd:YVO₄ laser by exploiting the birefringence of a wedge gain crystal and the alignment sensitivity of an optical resonator. The pulse duration are found to be 15.1 ps and 16.9 ps for π -polarization and σ -polarization.

ATH2A.43 • Wide-Range Peak Power Control in the Diode-Pumped Multiloop Self-Phase-Conjugate Nd:YAG Laser by Different Passive Q-Switches, Anastasiya Pogoda¹, Georgy V. Burkovsky¹, Pavel Makarchuk¹, Ivan Khakhalin¹, Sergey Smetanin², Anatoliy Boreysho¹; ¹BSTU VOEN-MEKH, Russia; ²Prokhorov General Physics Inst. of Russian Academy of Sciences, Russia. The possibility of wide-range control by generation of the diode-pumped multiloop self-phase-conjugate Nd:YAG laser using different passive Q-switches with variable initial transmittances are experimentally investigated changing the peak power by 100 times up to 28 MW at semipermanent output energy.

ATH2A.44 • WITHDRAWN

ATH2A.45 • Color Centers Transient Absorption and Ultra-short Pulse Lasing from LiLu_{0.7}Y_{0.3}F₄:Ce³⁺ Active Medium, Alexey Nizamutdinov¹, Ilnur Farukhshin¹, Vadim Semashko¹, Stella Korableva¹; ¹Kazan Federal Univ., Russia. We have obtained the single pulse laser oscillation with 400 \pm 10 ps pulse duration at 311 nm from LiLu_{0.7}Y_{0.3}F₄:Ce³⁺ crystal due to passive Q-switch by means of pump induced color centers absorption. In this work we discuss the role of intrinsic transient color centers on losses dynamics.

ATH2A.46 • Diode-pumped Alexandrite Ring Laser, Alexander Munk¹, B Jungbluth¹, M Strotkamp¹, S Gaussmann¹, Dieter Hoffmann¹, R Poprawe^{1,2}, J Hoeffner³; ¹Fraunhofer-Inst. for Laser Technolog, Germany; ²RWTH Aachen Univ., Germany; ³Leibniz Inst. of Atmospheric Physics, Germany. We present design and performance data of a linear Alexandrite laser in q-switched operation and an Alexandrite ring laser in quasi-cw mode, both longitudinally pumped by laser diode bar modules in the red spectral range.

ATH2A.47 • Method for Spectral Interrogation of the Fiber Bragg Gratings Using a Tunable Narrowband Light Source, Mikhail Belikin¹, Andrei Kulikov¹, Igor Meshkovsky¹; ¹ITMO Univ., Russia. We present results of the research work of low-cost interrogation system investigating for fiber Bragg grating sensor using 1550nm VCSEL. Interrogation principles are based on VCSEL operating principle and minimize additional optical and electronic components.

ATH2A.48 • Pulse-burst Laser for Laser-induced Plasma Ignition, Yufei Ma¹, Ying He¹, Xin Yu¹, Rengpeng Yan¹, Xudong Li¹, Jiangbo Peng¹, Zhiwei Dong¹, Rongwei Fan¹, Rui Sun¹; ¹Harbin Inst. of Tech., China. This paper showed that a small size passively Q-switched pulse-burst laser without amplifier can produce high repetition rate (higher than 20 kHz) and high pulse energy (higher than 10 mJ) simultaneously in a short period.

11:40—12:50

ATH3A • Postdeadline Papers

Bunsen Hall (Bunsensaal)

Presider: Alphan Sennaroglu, Koc Univ., Turkey

ATH3A.1 • 11:40

Amplification-free, 145 MW, 16 MHz Scalable Ultrafast Light-source for XUV and MIR Generation, Jonathan Brons¹, Vladimir Pervak², Marcus Seidel¹, Dominik Bauer³, Dirk Sutter³, Oleg Pronin¹, Ferenc Krausz^{1,2}; ¹Max-Planck-Institut für Quantenoptik, Germany; ²Ludwig-Maximilians-Universität, Germany; ³TRUMPF Laser GmbH, Germany; . We describe an Yb:YAG KLM thin-disk oscillator with enhanced nonlinearity directly providing 140 fs 160 W. This output is successfully compressed down to 30 fs in a scalable crystalline bulk-material setup, without need for fibers.

ATH3A.2 • 11:50

Exploiting Spatial-Hole-Burning-Free Raman Gain to Realize High-Power Single-Longitudinal Mode Oscillators, Oliver Lux^{1,2}, Soumya Sarang¹, Ondrej Kitzler¹, Richard P. Mildren¹; ¹MQ Photonics Research Centre, Department of Physics and Astronomy, Macquarie University, Australia; ²Institute of Optics and Atomic Physics, Technische Universität Berlin, Germany. Single-longitudinal mode operation of a continuous wave diamond Raman oscillator with power of 3.5 W is demonstrated. Frequency-stable and narrowband output which is tunable from 1238 to 1242 nm is obtained without intra-cavity frequency-selective elements.

ATH3A.3 • 12:00

A 265W and 782 fs Amplified Radially Polarized Beam Emitted by a Thin-disk Multipass Amplifier, Marwan Abdou Ahmed¹, Jan-Philipp Negel¹, André Loeschner¹, Thomas Graf¹; ¹Universität Stuttgart, Germany. The amplification of a high-power radially polarized beam in a thin-disk multipass amplifier is presented. Up to 265W output power at a pulse duration of 782 fs and a high degree of radial polarization is achieved.

ATH3A.4 • 12:10

Ho:YLF Regenerative Amplifier with 6.9 mJ at 1 kHz Overcoming Bifurcation Instability, Peter Kroetz^{1,2}, Axel Ruehl³, Gourab Chatterjee^{1,2}, Peng Li³, Krishna Murari^{3,2}, Huseyin Cankaya^{3,4}, Anne-Laure Calendron^{3,4}, Franz Kaertner^{3,4}, Ingmar Hartl³, R. J. Dwayne Miller^{1,5}; ¹Max-Planck Institute MPSD, Germany; ²CFEL - Center for Free Electron Laser Science, Germany; ³Deutsches Elektronen Synchrotron (DESY), Germany; ⁴Center for Ultrafast Imaging (CUI), Germany; ⁵University of Toronto - Chemistry and Physics, Canada. We demonstrate a Ho:YLF regenerative amplifier overcoming bifurcation instability and consequently achieving record-high extraction energies of 6.9 mJ at a repetition rate of 1 kHz with pulse-to-pulse fluctuations of 1.1%.

ATH3A.5 • 12:20

High-repetition-rate, 90- μ J ultrafast chirped-pulse parametric amplifier front-end at 1.55 μ m, Mark Mero¹, Frank Noack¹, Florian Bach¹, Valentin Petrov¹, Marc J. Vrakking¹; ¹Max Born Institute for Nonlinear Optics and Short Pulse Spectroscopy, Germany. 90- μ J, ~50-fs, 1.55- μ m pulses were generated at 100 kHz by a two-stage optical parametric chirped pulse amplifier, permitting the development of novel experimental strategies towards laser-based imaging of molecular structures and chemical reactivity.

ATH3A.6 • 12:30

> MW, mJ-High-Brightness Giant-Pulse Nd:YVO₄ Microchip Laser by Cross-Section Control, Arvydas Kausas¹, Takunori Taira¹; ¹IMS, Japan. In this work a Q-switched Nd:YVO₄/Cr⁴⁺:YAG laser was developed with the peak power and output energy of 1.17 MW and 1.03 mJ correspondingly. By changing the temperature of Nd:YVO₄ crystal control of the emission cross-section σ_{em} of the gain medium and thus Q-switch output was possible.

ATH3A.7 • 12:40

Continuous-wave ultraviolet Ce:LiCAF laser, Ondrej Kitzler¹, Barbara Wellmann¹, David Spence¹, David Coutts¹; ¹Macquarie University, Australia. We report a first demonstration and characterization of a 289.9 nm continuous-wave (cw) Ce:LiCAF laser pumped by a cw 266 nm laser. This direct-UV laser has the potential to be tuned from 285-315 nm, and to generate few-fs pulses.

12:50—13:50 • Lunch, On Your Own

Join the global movement to celebrate light.

Adopted by the United Nations, and endorsed by more than 100 partners from over 85 countries, the International Year of Light highlights to the citizens of the world the importance of light and optical technologies in their lives, for their futures and for the development of society.

13:50—16:00

ATh4A • Frequency Combs and Modelocked Sources

Bunsen Hall (Bunsensaal)

Presider: Irina Sorokina, Norwegian Univ. of Science and Technology, Norway

ATh4A.1 • 13:50

Recent Progress in High-Power Femtosecond Semiconductor Disk Lasers, Cesare Alfieri¹, Dominik Waldburger¹, Sandro M. Link¹, Emilio Gini¹, Mario Mangold¹, Bauke Tilma¹, Matthias Golling¹, Ursula Keller¹; ¹ETH Zürich, Switzerland. We present recent progress towards high-power femtosecond semiconductor disk lasers (SDLs): sub-150-fs SESAM-modelocked VECSEL with 300 W of peak power, sub-300-fs MIXSEL with high peak power and the first entirely MOVPE-grown MIXSEL.

ATh4A.2 • 14:02

Ultra-low phase noise all-PM Er: fiber optical frequency comb, Wolfgang Hänsel¹, Michele Giunta^{1,2}, Katja Beha¹, Matthias Lezius¹, Marc Fischer¹, Ronald Holzwarth^{1,2}; ¹Menlo Systems GmbH, Italy; ²Max-Planck-Inst. for Quantum Optics, Germany. We have locked fceo and frep of an all-PM 250 MHz Er: fiber femtosecond frequency comb with a bandwidth exceeding 1 MHz. This results in record-low integrated phase noise of 68 mrad and 55 mrad respectively.

ATh4.3 • 14:14

Modelocked Dual-Comb Lasers, Sandro M. Link¹, Mario Mangold¹, Matthias Golling¹, Alexander Klenner¹, Ursula Keller¹; ¹ETH Zurich, Switzerland. We present a simple way of generating simultaneously two modelocked pulse trains with both a semiconductor disk laser and a Nd:YAG laser, establishing a simple link from the optical domain to a microwave frequency comb.

ATh4A.4 • 14:26

Pulse Picking Scheme with Synchronized Acousto-Optic Modulator Carrier Frequency, Oliver de Vries¹, Tobias Saule², Marco Plötner¹, Fabian Lücking³, Tino Eidam⁴, Jens Limpert^{5,4}, Simon Holzberger², Thomas Schreiber¹, Ramona Eberhardt¹, Joachim Pupeza², Andreas Tünnermann^{1,5}; ¹Fraunhofer IOF, Germany; ²Max-Planck-Institut für Quantenoptik, Germany; ³Femtolasers Produktions GmbH, Austria; ⁴Active Fiber Systems GmbH, Germany; ⁵Friedrich-Schiller-Univ., Germany. We demonstrate an alternative approach facilitating the use of a travelling-wave type acousto-optic modulator to pick pulses from a high-repetition-rate carrier-envelope phase stable pulse train where Pockels cells cannot be applied due to piezoelectric ringing.

ATh4A.5 • 14:38

Low-Noise Gigahertz Frequency Comb from Diode-Pumped Solid-State Laser using Silicon Nitride Waveguides, Aline Sophie Mayer¹, Alexander Klenner¹, Adrea Johnson², Kevin Luke², Michael Lamont², Yoshitomo Okawachi², Michal Lipson², Alexander Gaeta², Ursula Keller¹; ¹ETH Zurich, Switzerland; ²Cornell Univ., USA. We present the first self-referenced f_{CEO}-stabilization based on Si₃N₄-waveguides, using only 36 pJ of coupled pulse energy. In addition, pump wavelength stabilization leads to record low noise performance of our 1-GHz diode-pumped solid-state laser.

Invited

ATh4A.6 • 14:50

Femtosecond Lasers as Universal Sources for Chemical Sensing and Biomedical Applications, Marcos Dantus¹; ¹Michigan State Univ., USA. We use spectral-temporal shaping to convert ultrashort femtosecond lasers into universal sources ideal for chemical sensing and biomedical imaging. Our work on automated adaptive pulse characterization and compression is making these sources and applications practical.

ATh4A.7 • 15:10

Generation of 49-fs pulses directly from distributed Kerr-lens mode-locked Yb:YAG thin-disk oscillator, Jinwei Zhang^{1,2}, Jonathan Brons¹, Marcus Seidel¹, Dominik Bauer², Dirk Sutter³, Vladimir Pervak⁴, Vladimir Kalashnikov⁵, Zhiyi Wei², Alexander Apolonski^{4,1}, Ferenc Krausz^{1,4}, Oleg Pronin¹; ¹Max Planck Inst. of Quantum Optics, Germany; ²Beijing National Lab for Condensed Matter Physics and Inst. of Physics, Chinese Academy of Sciences, China; ³TRUMPF Laser GmbH, Germany; ⁴Ludwig Maximilian Univ. of Munich, Germany; ⁵Aston Inst. of Photonic Technologies, UK. The concept of distributed Kerr-lens mode-locking and a thin-disk Yb:YAG oscillator based on this concept are presented. The described oscillator directly generates pulses with a duration of 49 fs and spectral width of 33 nm.

ATh4A.8 • 15:22

Diode-Pumped Kerr-Lens Modelocked Ti:Sapphire Laser Generating 450 mW in 58 fs Pulses and 350 mW in 39 fs Pulses, Kutun Gurel¹, Valentin J. Wittwer¹, Martin Hoffmann¹, Stéphane Schilt¹, Thomas Sudmeyer¹; ¹Universite de Neuchatel, Switzerland. We present the highest average power from a green diode-pumped Ti:Sapphire laser. In CW-operation, we achieve 650 mW. Using Kerr-lens-modelocking (KLM) we obtain 450 mW in 58-fs pulses and 350 mW in 39-fs pulses.

ATh4A.9 • 15:34

Nonlinear Polarization Rotation Mode-locking via Phase-mismatched Type I SHG of a Thin Disk Femtosecond Laser, Bastian Borchers¹, Christoph Schaefer¹, Christian Fries², Mikhail Larionov³, Ralf Knappe¹; ¹Coherent Kaiserslautern GmbH, Germany; ²Photonikzentrum Kaiserslautern e.V., Germany; ³Dausinger + Giesen GmbH, Germany. We present a novel two-crystal approach rendering polarization rotation mode-locking via cascaded chi²-nonlinearities applicable to broadband lasers sources. This technique is demonstrated at a thin disk oscillator reaching >40W average power and <500fs pulse duration.

ATh4A.10 • 15:46

193 fs from an Yb:YAG Oscillator Mode-Locked Using Nonlinear Polarization Rotation via Type I SHG with Intrinsic Dispersion Compensation, Christian Fries¹, Christoph Schaefer², Christian Theobald¹, Johannes A. L'huillier¹; ¹Photonik-Zentrum Kaiserslautern e.V., Germany; ²Coherent Kaiserslautern GmbH, Germany. We present mode-locking via nonlinear polarization rotation (NPR) in Yb:YAG. Intrinsic dispersion compensation via negative SPM and normal dispersion in the NPR crystal allowed for 193 fs pulses. The group-velocity-mismatch effects allowed for adjusting the pulse duration between 193 fs - 1 ps.

AF1A • Applications & Sources Joint Session with Plenary Speaker

Bunsen Hall (Bunsensaal)

Presider: Clemens Hoenninger; Amplitude Systemes, France

AF1A.1 • 08:00

Femtosecond-laser-based Microstructuring and Modification of Transparent Materials, Roberto Osellame¹; ¹*Inst. for Photonics and Nanotechnologies - National Research Council (CNR), Italy*. Femtosecond laser micromachining of transparent materials is a powerful tool in basic science and industrial applications. Its unique 3D capabilities and process versatility enables compact and effective device layouts for integrated photonics, microfluidics and nanoTech.

AF1A.2 • 08:40

Nonlinear optical waveguide for GaN-laser pumping, Sunao Kurimura¹, Hwan Hong Lim¹, Shigeki Takeuchi²; ¹*National Inst. for Materials Science, Japan*; ²*Graduate School of Engineering, Kyoto Univ., Japan*. NLO waveguide based on low-absorption Mg:SLT is presented for efficient wavelength conversion. GaN-laser-pumped optical parametric generation produces arbitrary spectral components and shapes in the visible to near infrared range by designing QPM structures.

AF1A.3 • 09:00

Nonlinearity Engineering of Ultrafast Lasers and Laser-Material Interactions, F Omer Ilday¹; ¹*Bilkent Univ., Turkey*. From novel mode-locking regimes to laser-induced self-assembly of nanostructures, it is not only possible, but highly rewarding to exploit the underlying nonlinear dynamics of photonic systems towards achieving superior technical functionality. These different dissipative systems manifest similar phenomena, such as nonlinear gain, feedback, and modulation instability.

AF1A.4 • 09:20

High-power and High-efficiency Frequency-doubled Fundamental-mode Thin-disk Laser, Tom Dietrich¹, Stefan Piehler¹, Martin Rumpel¹, Thomas Graf¹, Marwan Abdou-Ahmed¹; ¹*Institut fuer Strahlwerkzeuge - IFSW, Germany*. A highly efficient grating mirror for intra-cavity wavelength and polarization stabilization in a frequency-doubled Yb:YAG thin-disk laser enables up to 403 W of output power at an unprecedented efficiency of 40.7% in close-to fundamental-mode operation.

AF1A.5 • 09:32

High Power Nd:YAG Spinning Disk Laser, Andrew Ongstad¹, Matthew Guy¹, Joeseoph R. Chavez¹; ¹*RDLTD, Air Force Research Lab, USA*. We report on a high power Nd:YAG spinning disk laser. The 6 cm diameter disk generated 181 W CW output with 300 W of absorbed pump. The power conversion efficiency was 67%.

AF1A.6 • 09:44

Dense Wavelength Multiplexing and 35 µm-Fiber Coupling of Wavelength Chirped High Power Diode Laser Bars, Ulrich Witte¹, David Rubel¹, Martin Traub¹, Marcus Hamann¹, Stefan Hengesbach¹, Dieter Hoffmann¹; ¹*Fraunhofer Inst. for Laser Tech., USA*. We present a flexible, modular and cross-talk free concept for dense wavelength beam combining of HPDL by use of ultra-steep dielectric filters. Five emitters of one mini bar are coupled into a 35 µm fiber. Experimental results of internally and externally stabilized HPDL are presented.

AF2A • Advanced ps, fs and MIR processing

Bunsen Hall (Bunsensaal)

Presider: Arnold Gillner, Fraunhofer-Institut für Lasertechnik ILT, Germany

AF2A.1 • 10:30

Invited

Picosecond Infrared Laser (PIRL) Scalpel: Achieving the Fundamental Limits to Minimally Invasive Surgery and Biodiagnostics, R. J. Dwayne Miller^{1,2}; ¹MPI - the Structure and Dynamics/Matter, Germany; ²Dept.s of Chemistry and Physics, Univ. of Toronto, Canada. A new mechanism has been discovered that completely arrests nucleation growth and eliminates associated shock wave damage to adjacent tissue with no scar tissue formation while simultaneously providing intact molecular signatures for in situ biodiagnostics.

AF2A.2 • 10:50

Invited

Efficient High-quality Processing of CFRP with a kW Ultrafast Thin-disk Laser, Thomas Graf¹, Rudolf Weber¹, Marwan Abdou-Ahmed¹, Volker Onuseit¹, Christian Freitag¹, Margit Weidenmann¹, Jan-Philipp Negel¹, Andrea Löscher¹; ¹Universität Stuttgart, Germany. We report on the efficient processing of CFRP with negligible thermal damage which was enabled by the application of a thin-disk laser system that generates ps pulses at an average output power exceeding 1 kW.

AF2A.3 • 11:10

Invited

Two-Beam Two-photon Lithography for Nanophotonics, Min Gu¹; ¹Centre for Micro-Photonics and CUDOS, Swinburne Univ. of Tech., Australia. We show our recent progress on two-beam two-photon lithography in polymerization and metal-polymer hybrid materials. The application of this super-resolution direct laser writing method in optical big data storage and biomimetic nanophotonic devices are presented.

AF2A.4 • WITHDRAWN

AF2A.5 • 11:50

Ablation-cooled material removal at high speed with femtosecond pulse bursts, Can Kerse¹, Hamit Kalaycioglu¹, Parviz Elahi¹, Önder Akçaalan¹, Seydi Yavas¹, Mehmet D. Asik², Denizhan K. Kesim¹, Koray Yavuz¹, Barbaros Çetin¹, F Omer Ilday¹; ¹Bilkent Univ., Turkey; ²NanoTech. and Nanomedicine Departmen, Hacettepe Univ., Turkey. We report exploitation of ablation cooling, well-known in rocket design, to remove materials, including metals, silicon, hard and soft tissue. Exciting possibilities include ablation using sub-microjoule pulses with efficiencies of 100-μJ pulses.

AF2A.6 • 12:02

Femtosecond laser for glass processing, Konstantin Mishchik², John Lopez², Clementine Javaux³, Rainer Kling³, Guillaume Machinet¹, Clemens Hoenninger¹, Eric Mottay¹; ¹Amplitude Systemes, France; ²CELI, Univ. of Bordeaux, France; ³Alphanov, France. A compact and flexible femtosecond laser with pulse duration of ~400-fs and pulse energy up to 100 μJ is presented. The femtosecond laser source is applied to glass processing applications.

AF2A.7 • 12:14

Passively Q-switched 2 μm Tm-doped laser for medical applications, Salman Noach¹, Daniel Sebbag¹, Arik Korenfeld¹; ¹Jerusalem College of Tech., Israel. Tm-based lasers at 1936nm and 1885nm in CW and passive Q-switch pulsed operation were developed. High pulse energies, peak powers and good agreement with the model were achieved. Laser interaction with tissue tested and showed successful ablation.

AF3A • Ultrafast Processing in the Electronics Industry*Bunsen Hall (Bunsensaal)*

Presider: Karsten Koenig, Universität des Saarlandes, Germany

AF3A.1 • 14:00**Invited**

Present Status and Trend of Femtosecond Laser Processing in Next Generation Display AMOLED Manufacturing Industry of Korea, Sung-Hak Cho^{1,2}; ¹Laser & Electron Beam Application, KIMM (Korea Inst. of Machinery & Materials), Korea; ²Nanomechatronics, UST (Korea Univ. of Science & Tech.), Korea. Trend of femtosecond laser processing in South Korea will be presented. The presentation is mostly about display AMOLED manufacturing industry in Korea.

AF3A.2 • 14:20**Invited**

Ultrafast Lasers enable Next Generation Batteries, Joris van Nunen¹; ¹Coherent Inc, USA. We present on a high-speed laser structuring technique, which enables a significant improvement of electrode and separator wetting and battery performance and revealed higher capacities and increased cycle numbers compared to standard cells.

AF3A.3 • 14:40**Invited**

Ultrafast Laser Machining of Transparent Materials: Process Development Supported by In-Situ Diagnostics, Malte Kumkar¹, Myriam Kaiser¹, Jonas Kleiner¹, Daniel Flamm¹, Daniel Grossmann^{1,3}, Klaus Bergner², Stefan Nolte²; ¹TRUMPF Laser- und Systemtechnik GmbH, Germany; ²Institute of Applied Physics, Friedrich-Schiller-Universität Jena, Germany; ³Chair for Laser Tech., Technical Univ. Aachen, Germany. Controlling the nonlinear absorption and accumulation effects is crucial for machining of transparent materials by ultrafast lasers. Examples illustrate the benefit of in-situ diagnostics for the process development using spatial and temporal beam shaping.

AF3A.4 • 15:00**Invited**

Guidelines for Efficient Direct Ablation of Dielectrics with Single Femtosecond Pulses, Marc Sentis¹, Maxime Lebugle¹, Nicolas Sanner¹, Olivier Uteza¹; ¹CNRS, France. Guidelines to femtosecond laser users to select laser parameters (fluence and pulse duration from 7 to 300 fs), in the context of the development of ablation processes at the surface of dielectrics using single femtosecond pulses will be presented. Results and discussion are based on a comprehensive experimental and theoretical analysis of the energy deposition process at the surface of fused silica samples, in the range of intensities from 10^{13} to 10^{15} W/cm².

AF3A.5 • 15:20

Multi Parallel Ultrashort Pulse Laser Processing, Arnold Gillner¹, Michael Jüngst¹, Patrick Gretzki¹; ¹Ablation and Joining, Fraunhofer Inst. for Laser Tech., Germany. Ultra-short pulse lasers present a new class within high-performance laser beam sources for industrial applications. For large scale processing with high power ultrashort pulsed lasers a new Tech. for beam irradiation using diffractive optical elements and spatial light modulators is presented.

AF3A.6 • 15:32

Innovative Laser Technologies for Cutting, Drilling and Structuring of Glass and Other Transparent, Brittle Materials, Roland Mayerhofer¹; ¹ROFIN-BAASEL Lasertech, Germany. Laser filamentation is one of the most promising processing technologies to separate glass and other transparent brittle materials at high speed and very good surface quality. The principle will be described and compared to other laser processes, like fusion cutting or ultrafast laser ablation.

SAVE THE DATE

Advanced Solid State Lasers Conference & Exhibition

Application of Lasers for Sensing & Free Space Communication (LS&C)

30 October — 4 November 2016
Boston, Massachusetts, USA
