Program Committees

Congress Chair

Kenneth Baldwin, *Australian National University, Australia*

Local Organizing Chair

Armin Aberle, *Solar Energy Research Institute of Singapore, Singapore*

Fourier Transform Spectroscopy (FTS)

Frans J. Harren, *Radboud Universiteit Nijmegen, Netherlands, Program Chair*

Sheng-Cai Shi, *Purple Mountain Observatory, China, Program Chair*

Kaley Walker, *University of Toronto, Canada, Program Chair*

Ian Coddington, *NIST, USA*

Christoph Englert, *US Naval Research Laboratory, USA*

Jérôme Genest, *Université Laval, Canada*

Erik Kretschmer, *Karlsruher Institut für Technologie, Germany*

Hiroshi Matsuo, *National Astronomical Observatory Japan, Japan*

Isamu Morino, *NIES, Japan*

Scott Paine, *Harvard-Smithsonian Center for Astrophysics, USA*

Luca Palchetti, *Istituto Nazionale di Ottica, Italy*

Aldona Wiacek, *Saint Mary's University, USA*

Hyperspectral Imaging and Sounding of the Environment (HISE)

Akihiko Kuze, *Japan Aerospace Exploration Agency, Japan, Program Chair*

Mark Wenig, *Ludwig-Maximilians-Universität, Germany, Program Chair*

Michael Yetzbacher, *US Naval Research Laboratory, USA, Program Chair*

States Myoung-Hwan Ahn, *Ewha Womans University, South Korea*

Eric Bucsela, *SRI International, Inc., USA*

Miran Bürmen, *University of Ljubljana, Slovenia*

Ka Lok Chan, *DLR Oberpfaffenhofen Aerospace Center, Germany*

Xianglei Huang, *University of Michigan, USA*

Gerrit Kuhlmann, *EMPA, Switzerland*

Yi Liu, *Chinese Academy of Sciences, China*

Tim Malthus, *CSIRO, Australia*

Martin Mlynchzak, *NASA Langley Research Center, USA*

Wesley Moses, *Naval Research Laboratory, USA*

Cindy Ong, *CSIRO Energy Technology, Australia*

Stuart Phinn, *University of Queensland, Australia*

Peter Pilewskie, *University of Colorado at Boulder, USA*

Shanshan Wang, *Fudan University, China*

Heli Wei, *Anhui Institute of Optics Fine Mechanics, China*

Optics and Photonics for Energy & the Environment (E2)

Adam Fleisher, *NIST, USA, Program Chair*

Aleksandra Foltynowicz, *Umea University, Sweden, Program Chair*

Wilfred Walsh, *National University of Singapore, Singapore, Program Chair*

Jong Chow, *Australian National Univ., Australia*

Phil DeCola, *Sigma Space, USA*

Lukas Emmenegger, *EMPA, Switzerland*

Melanie Ghysels-Dubois, *Université de Reims Champagne-Ardenne, France*

Vanda Grubišić, *National Center for Atmospheric Research, USA*

Iftach Klapp, *ARO-Volcani Center, Israel*

Hong Lin, *National Institute of Metrology, China*

Gregory Rieker, *University of Colorado at Boulder, USA*

Vincenzo Spagnolo, *Politecnico di Bari, Italy*

Jean-Pierre van Helden, *Leibniz Institute for Plasma Science & Technology, Germany*

Jonas Westberg, *Princeton University, USA*

Azer Yalin, *Colorado State University, USA*

Optics in Solar Energy (SOLAR)

Peter Bermel, *Purdue University, USA, Program Chair*

Serena Fen Lin, *National University of Singapore, Singapore, Program Chair*

Olindo Isabella, *Technische Universiteit Delft, Netherlands, Program Chair*

Klaus Jaeger, *Helmholtz-Zentrum Berlin, Germany, Program Chair*

Jos Haverkort, *Technische Universiteit Eindhoven, Netherlands*

Jian Wei Ho, *National University of Singapore, Singapore*

Minghui Hong, *National University of Singapore, Singapore*

Cangming Ke, *National University of Singapore, Singapore*

Wojciech Lipinski, *The Australian National University, Australia*

Benjamin Lipovsek, *University of Ljubljana, Slovenia*

Shulong Lu, *Chinese Academy of Sciences, China*

Joseph Luther, *National Renewable Energy Lab., USA*

Wahed Muhammad, *National University of Singapore, Singapore*

Ali Naqavi, *California Institute of Technology, USA*

Bonna Newman, *ECN Solar Energy, Netherlands*

Ulrich Paetzold, *Karlsruhe Institute of Technology, Germany*

Noren Pan, *MicroLink Devices Inc., USA*

Rudi Santbergen, *Technische Universiteit Delft, Netherlands*

Rolf Stangl, *Solar Energy Research Institute of Singapore, Singapore*

Hairen Tan, *University of Toronto, Canada*

Liu Xiaogang, *National University of Singapore, Singapore*

General Information

Online Access to Technical Digest

Full Technical Attendees have both EARLY and FREE continuous online access to the Congress Technical Digest and Post Deadline papers through OSA Publishing's Digital Library. The presented papers can be downloaded individually or by downloading .zip files (.zip files are available for 60 days).

1. Visit the conference website at www.osa.org/EnergyOPCC
2. Select the "Access digest papers" link on the right hand navigation.
3. Log in using your email address and password used for registration. You will be directed to the conference page where you will see the .zip file link at the top of this page.

[Note: if you are logged in successfully, you will see your name in the upper right-hand corner.]

Access is limited to Full Technical Attendees only. If you need assistance with your login information, please use the "forgot password" utility or "Contact Help" link.

Poster Presentation PDFs

Authors presenting posters have the option to submit the PDF of their poster, which will be attached to their papers in OSA Publishing's Digital Library. If submitted, poster PDFs will be available about two weeks after the meeting. While accessing the papers in OSA Publishing's Digital Library look for the multimedia symbol shown above.

About OSA Publishing's Digital Library

Registrants and current subscribers can access all of the meeting papers, posters and postdeadline papers on OSA Publishing's Digital Library. The OSA Publishing's Digital Library is a cutting-edge repository that contains OSA Publishing's content, including 16 flagship, partnered and co-published peer reviewed journals and 1 magazine. With more than 304,000 articles including papers from over 640 conferences, OSA Publishing's Digital Library is the largest peer-reviewed collection of optics and photonics.

Access to the Wireless Internet

OSA has provided complimentary wireless internet for all Congress attendees. Use the information below to log in.

Network - MICWIFI@RWS
Password - Rwsdice2018

Special Events

Accelerating the Deployment of Renewables in Southeast Asia Special Panel

Monday, 5 November, 17:30–19:00
Leo 1&2

Moderator: Kenneth Baldwin, Director, ANU Energy Change Institute, Australian National University, Australia

Panelists:

Christophe Inglin, Managing Director, Energetix Pte Ltd., Singapore

Edwin Khew, Chairman, Sustainable Energy Association of Singapore (SEAS), Singapore

Alan Khor, Head of Engineering, Procurement & Construction, Cleantech Solar, Singapore

Eicke Weber, Berkeley Education Alliance for Research in Singapore, Singapore

Thomas White, Australian National University, Australia

SERIS Local Lab Tours

Thursday, 8 November
09:00–13:00

The local host of OSA Light, Energy and the Environment Congress, the Solar Energy Research Institute of Singapore (SERIS, NUS) is pleased to organize local guided tours to SERIS' laboratories and facilities located at both the National University of Singapore (NUS), and Cleantech One (CTO) on the morning of 8 Nov 2018, as part of OSA's local site visit program. Pre-registration for the SERIS guided lab tours is required for logistic arrangement. Registration confirmation will be on first-come, first-served basis.

Plenary Speaker

Eicke R. Weber, *Berkeley Education Alliance for Research in Singapore, Singapore*

Photovoltaics Moving into the Terawatt Age

Global PV production capacity will soon reach 100-120 GWp/a, doubling the production volume of 2016. More than 90% of the global PV market is crystalline Silicon technology. New approaches for higher efficiencies will be discussed, including heterojunctions, such as low-cost III/V or Perovskite layers on silicon.

Biography: Eicke R. Weber is Director/CEO of the Berkeley Education Alliance for Research in Singapore (BEARS). Till 2016, he served as Director of the Fraunhofer Institute for Solar Energy Systems ISE and Professor of Physics at the Albert-Ludwigs-University of Freiburg, Germany. Weber studied Physics at the University of Cologne, Germany, where he obtained his doctorate in 1976 and his habilitation in 1983.

Prof. Weber's research is concerned with Materials Science of semiconductors, especially for photovoltaic applications. He was visiting professor at the Tohoku University in Sendai (1990), and at the Kyoto University in Kyoto, Japan (2000). In 1994 he received an Alexander von Humboldt Senior Scientist Award. In 2006 he received the Award of Merit from former German President Horst Kohler. In June 2013, Prof. Weber was honored with the SolarWorld Einstein Award. In January 2014, he received the Zayed Future Energy Prize from the Crown Prince of the United Arab Emirates on behalf of Fraunhofer ISE. He served as founding president of the German Energy Storage Association BVES (2012-16) and is a member of the German Academy of Science and Engineering (acatech).

Keynote Speakers

David Crisp, *Jet Propulsion Laboratory, California Institute of Technology, USA*

Measuring Atmospheric Carbon Dioxide from the NASA Orbiting Carbon Observatory-2 (OCO-2)

NASA's OCO-2 spacecraft has returned observations of atmospheric carbon dioxide (CO₂) since September 2014. These data are being used to study the processes emitting CO₂ into the atmosphere and those absorbing it at the surface.

Biography: David Crisp is an atmospheric physicist at the Jet Propulsion Laboratory (JPL), California Institute of Technology. He is currently serving as the Science Team Leader for NASA's Orbiting Carbon Observatory-2 (OCO-2) mission and the soon-to-be-launched OCO-3 mission. He is also a member of the Science Team for the Earth Ventures Geostationary Carbon Cycle Observatory (GeoCarb), a member of the European Copernicus CO₂ Mission Advisory Group and the Greenhouse Gas Lead for the Committee on Earth Observation Satellites (CEOS) Atmospheric Composition Virtual Constellation (AC-VC).

Iouli E. Gordon, *Harvard-Smithsonian Center for Astrophysics, USA*

HITRAN2016 and Beyond: Reference Molecular Spectroscopy in the XXI Century

The most recent edition of the HITRAN spectroscopic database (HITRAN2016) will be presented at the meeting including new and improved data and structure, efficient web interface at www.hitran.org, and the HITRAN Application Programming Interface (HAPI).

Biography: Iouli Gordon is a physicist at the Harvard-Smithsonian Center for Astrophysics in Cambridge, USA. He is the director of the HITRAN and HITEMP projects (www.hitran.org). HITRAN and HITEMP are molecular spectroscopic databases which constitute an international reference standard for the spectroscopic parameters of major absorbers of light in planetary atmospheres. Dr. Gordon led the efforts towards the assembly, validations and public release of the HITRAN2016 database and associated tools. Dr. Gordon obtained his Diploma in Engineering Physics at the Moscow Institute of Physics and Technology, Russia (1999), MSc in Physics at the University of Toronto, Canada (2001), and PhD at the University of Waterloo, Canada (2006). His research interests focus on laboratory and theoretical molecular spectroscopy of atmospheric and astrophysical interest, use of available spectroscopic information to construct databases, and development of the tools for enhancing data accessibility and effectiveness of scientific collaborations.

Hank Revercomb, *University of Wisconsin-Madison, Space Science and Engineering Center, USA*

Innovation in Optical Materials Design to Manufacture for Driving High Performance Photovoltaics Cost-Effectively

For global observing systems that require a significant number of individual spacecraft and sensors, it is highly advantageous to

have observations that are sensor independent with respect to spectral properties and instrument responsivity. FTS sensors are especially well suited to achieving this goal.

Biography: Hank Revercomb, director of the UW-Madison, Space Science and Engineering Center (SSEC) for the last 17 years, has carried on the SSEC traditions established by Professor V. E. Suomi. He has been a leader in using radiation measurements to study the atmospherics of the earth and other planets. Specialties include: high spectral resolution instrumentation for atmospheric remote sensing and spectroscopy, operational infrared sounders, climate observing systems, and net flux observations of Venus and Jupiter.

Wei Huang, *Northwestern Polytechnic University, China*

Recent Advances in Flexible Electronics

In the past decades, organic optoelectronics has made great progress both in fundamental studies and commercial applications because of their excellent properties, such as solution processable,

printable, flexible, low-cost and able to be made at large area.

Biography: Huang Wei is one of the earliest and most renowned scholars in the research of polymer light-emitting diodes (PLEDs) and has great reputation in the field of organic optoelectronics research in international community. His current research interests include organic/plastic/flexible electronics, bioelectronics, nanomaterials, nanoelectronics, and polymer chemistry. In the area of organic optoelectronics and flexible electronics, he has made a large amount of systematic and innovative achievements and has published more than 700 papers as the first author or corresponding author in *Nature Materials*, *Nature Photonics*, *Nature Nanotechnology*, *Nature Communications*, *Advanced Materials*, *Journal of the American Chemical Society*, *Angewandte Chemie-International Edition*, *Chemical Reviews*, etc., with over 37,000 citations (ISI Web of Knowledge) and an H-index of 99.

He is the most cited Researchers in the field of material science and chemistry. His contributions to these disciplines have led to wide-ranging publications that address both fundamental and more applied topics, and that place him amongst the 1% most highly cited materials/chemistry/informatics scientists in the world (ISI Highly Cited Scientist). He is editor-in-Chief of *npj Flexible Electronics* and editorial board member of top international journals such as *Advanced Materials*, *Advanced Electronic Materials*, *Progress in Polymer Science*, etc. He has held over 200 patents which are granted in USA, Singapore and China. Additionally, Professor Huang has published several academic books, such as *Organic Optoelectronics*, *Bio-optoelectronics*, *Introduction to Organic Light-Emitting Materials and Devices*, etc.

Tom White, *The Australian National University, Australia*

Perovskite-silicon Tandem Solar Cells: Progress, Challenges and Opportunities

Tandem solar cells that combine emerging perovskite materials with conventional silicon photovoltaic technology have the potential to boost silicon cell efficiencies well beyond their practical and theoretical

efficiency limits. This presentation will review recent progress on perovskite-silicon tandem solar cells, the current research challenges, and the exciting opportunities presented by this technology.

Biography: Tom White is currently an Associate Professor in the Research School of Engineering at the Australian National University, Canberra. He completed a PhD in Physics at the University of Sydney in 2006, followed by three years as a research fellow at the University of St Andrews, UK, studying nanophotonic enhancement of light-matter interactions. Since 2011, Dr. White's main research focus has been photovoltaics; initially on nanophotonic light-trapping; and more recently on the development of high efficiency perovskite solar cells and perovskite-silicon tandems. He has published more than 90 journal papers on topics including electromagnetic theory, photonic crystals, nonlinear optics, optical engineering for solar cells and novel photovoltaic materials.

Buyers' Guide

Agilent Technologies

Exhibitor

1 Yishun Ave. 7
Singapore 768923
E: Inquiry_lsca@agilent.com
URL: www.agilent.com

Agilent provides laboratories worldwide with instruments, services, consumables, applications and expertise, enabling you to gain the insights you seek. Our Molecular Spectroscopy products include high performance UV-Vis-NIR and FTIR systems well suited for the measurement of advanced optical systems in Research and development and production. Agilent's expertise and collaborations give you the highest confidence in your analyses.

American Elements

Sponsor

1093 Broxton Avenue, Suite 2000
Los Angeles, CA 90024, USA
E: customerservice@americanelements.com
URL: www.americanelements.com

American Elements is the world's leading manufacturer of engineered and advanced materials with a catalog of over 16,000 materials including ferro metals, ferro alloys, compounds and nanoparticles; high purity metals, chemicals, semiconductors and minerals; and crystal-grown materials for commercial & research applications including high performance steels, super alloys, and automotive, aerospace, military, medical, electronic, and green/clean technologies. American Elements maintains research and laboratory facilities in the U.S. and manufacturing/warehousing in the U.S., Mexico, Europe, and China.

OSA Publications

Sponsor

2010 Massachusetts Ave.
Washington, DC 20036, USA
E: info@osa.org
URL: www.osa.org

OSA Publishing publishes and distributes the largest collection of peer-reviewed optics and photonics content, covering a variety of disciplines including physics, engineering, biomedical, telecommunications, and energy, with the most citations in optics.

Solar Energy Research Institute of Singapore (SERIS)

Exhibitor

National University of Singapore (NUS)
7 Engineering Drive 1, Block E3A
Singapore, 117574
E: seris-info@nus.edu.sg
URL: www.seris.sg

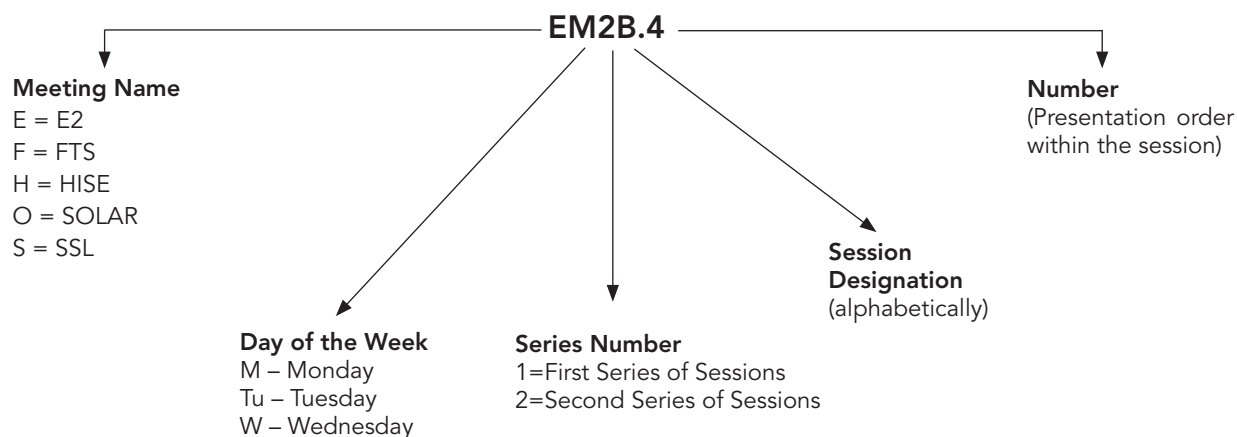

The Solar Energy Research Institute of Singapore (SERIS) operates world-class R&D facilities to offer innovative solutions to clients in the solar industry, financial sectors and government agencies. We provide one-stop, integrated R&D, testing & consulting services in the area of PV cells, PV modules and PV systems, including BIPV.

WORKinOPTICS

2010 Massachusetts Avenue NW
Washington, DC 20036, USA
E: workinoptcis@osa.org
URL: www.workinoptics.com

Your source for the best jobs and the best candidates in the industry. WORKinOPTICS provides a state-of-the-art platform that efficiently connects employers and job seekers within the optics and photonics community. Your next career opportunity or new hire is just a click away. OSA Industry Development Associates (OIDA) Members receive 20 free job postings.

Explanation of Session Codes

The first letter of the code designates the meeting. The second element denotes the day of the week. The third element indicates the session series in that day (for instance, 1 would denote the first sessions in that day). Each day begins with the letter A in the fourth element and continues alphabetically through the parallel session. The lettering then restarts with each new series. The number on the end of the code (separated from the session code with a period) signals the position of the talk within the session (first, second, third, etc.).

For example, a presentation coded EM2B.4 indicates that this paper is being presented as part of the EUV meeting on Monday (M) in the second series of sessions (2), and is the second parallel session (B) in that series and the fourth paper (4) presented in that session.

Invited papers are noted with **Invited**

Plenary papers are noted with **Plenary**

Keynote papers are noted with **Keynote**

Online Access to Technical Digest

Full Technical Attendees have both EARLY and FREE perpetual access to the digest papers through OSA Publishing's Digital Library.

To access the papers go to
www.osa.org/EnergyOPC and select the "Access Digest Papers"

As access is limited to Full Technical Conference Attendees only, you will be asked to validate your credentials by entering the same login email address and password provided during the Conference registration process.

If you need assistance with your login information, please use the "forgot password" utility or "Contact Help" link.

Agenda of Sessions — Monday, 5 November

	Pisces 1	Pisces 2	Pisces 3	Pisces 4
	E2	FTS	HISE	SOLAR
07:30–18:00	Registration, Leo Foyer, Level 1			
08:30–09:30	JM1A • Plenary Session, Leo 1&2			
09:30–10:00	Coffee Break/Exhibits, Leo Foyer			
10:00–12:00	EM2A • Industrial Monitoring I: Energy and Power	FM2B • Dual Comb and Miniaturized-based FTS Developments	HM2C • Hyperspectral Sensing of Land and Water (ends at 11:45)	OM2D • PV Beyond Silicon (ends at 11:45)
12:00–13:00	Lunch, Leo Foyer			
13:00–15:00	EM3A • Sensing of Plasma & Combustion Environments	FM3B • Measurements of the Earth and the Earth's Atmosphere: Satellite and Airborne Systems	HM3C • Recent Advances in Hyperspectral Instruments, Analysis, and Algorithms I	OM3D • PV Modules and Characterization
15:00–15:30	Coffee Break/Exhibits, Leo Foyer			
15:30–17:30	JM4A • Solar Energy and Energy Storage (E2/SOLAR) (ends at 17:15)	FM4B • Comb-based Spectroscopy	HM4C • Recent Advances in Hyperspectral Instruments, Analysis, and Algorithms II (ends at 16:30)	
17:30–19:00	Accelerating the Deployment of Renewables in Southeast Asia Special Panel, Leo 1&2

CALL FOR PAPERS:

Light, Energy and the Environment 2018 Joint Feature Issue

Submission Opens: 1 December 2018

Submission Deadline: 7 January 2019

Optics Express and *Applied Optics* welcome submissions for a joint Feature Issue comprising expanded papers from the 2018 OSA Light, Energy and the Environment Congress. This special issue will include expanded papers covering the following topical meetings:

- Fourier Transform Spectroscopy (FTS)
- Hyperspectral Imaging and Sounding of the Environment (HISE)
- Optics and Photonics for Energy & the Environment (E2)
- Optics in Solar Energy (SOLAR)
- Solid-State Lighting (SSL)

FEATURE ISSUE EDITORS

Adam J. Fleisher (Lead), *National Institute of Standards & Technology, USA*

Peter Bermel, *Purdue University, USA*

Frans Harren, *Radboud Universiteit Nijmegen, The Netherlands*

Akihiko Kuze, *Japan Aerospace Exploration Agency, Japan*

Qihua Xiong, *Nanyang Technological University, Singapore*

JM1A • PlenaryJM1A.1 • 08:30 **Plenary**

Photovoltaics Moving into the Terawatt Age, Eicke R. Weber¹; ¹*Berkeley Education Alliance for Research, Singapore*. In the last few years, PV electricity became cost-competitive with electricity produced by conventional sources. Global PV production capacity will reach in the next 2-3 years 100-120 GWp/a, doubling the production volume of 2016, soon bringing global PV installations into the Terawatt range. A key factor for this growth will be continuous technology advances aimed at higher efficiencies at reduced cost. In addition, cell efficiency will be even more important than lowest cost, to optimize energy harvest from a given area. Crystalline Silicon technology currently represents more than 90% of the global PV market. This technology is approaching a ceiling of 29% efficiency for a single-bandgap semiconductor. New approaches for higher efficiencies require heterojunctions, and several approaches will be discussed. These include heterojunctions on silicon, allowing to combine well-established large-scale Silicon PV technology with new technologies, such as low-cost III/V or Perovskite layers.

09:30–10:00 Coffee Break/Exhibits, Leo Foyer

Pisces 1

Optics and Photonics for
Energy & the Environment

10:00–12:00

**EM2A • Industrial Monitoring I:
Energy and Power**

Presider: Jonas Westberg;
Princeton Univ., USA

EM2A.1 • 10:00

Tapered multi-mode optical fiber sensor to detect petrol adulteration, Vinod K. Singh¹; ¹*Indian Institute of Technology, Dhanbad, India*. In the present manuscript an intensity modulated optical fiber sensor has been reported to detect petrol adulteration. The sensor has been fabricated using tapered multi-mode fiber (MMF). The maximum sensitivity of 123 nW/% is obtained.

EM2A.2 • 10:15

Broadband fluorescence from green-synthesized carbon dots, Venkata Siva Gummaluri¹, Somesh Sabat², Vijayan C¹; ¹*Indian Inst. of Technology Madras, India*; ²*Gangadhar Meher Univ., India*. Visible broadband fluorescence from green-synthesized carbon dots is demonstrated. Intermixing of carbon dot samples results in broadband fluorescence covering the visible spectrum. The results indicate carbon dots as green materials for designing white light sources.

EM2A.3 • 10:30

Preliminary Study of Distributed Fiber Optic Sensing Technologies in Hydraulic Machinery, Can Yao¹, Xingxing Huang², PingYu Zhu³, Camille Bres¹, Luc Thévenaz¹; ¹*Ecole Polytechnique Federale de Lausanne, Switzerland*; ²*WinGD, Switzerland*; ³*GuangZhou Univ., China*. This paper includes a preliminary study of bringing innovative and promising distributed optical fiber sensing technologies to strain monitoring of hydraulic machinery.

EM2A.4 • 10:45

A Novel Route to Plastics Recycling via Unique, Background-free, Micro-scale Photonic Markers, Bryce S. Richards¹, Dmitry Busko¹, Guojun Gao¹, Damien Hudry¹, Ian Howard¹, Andrey Turshatov¹; ¹*Karlsruhe Inst. of Technology, Germany*. This work demonstrates the development of novel up-conversion (UC) and down-shifting (DS) micro-scale photonic markers for the unique fluorescent labelling of polymers to realize both high-yield and high-purity recycled product.

Pisces 2

Fourier Transform
Spectroscopy

10:00–12:00

**FM2B • Dual Comb and
miniaturized-based FTS
developments**

Presider: Frans J. Harren;
Radboud Universiteit Nijmegen,
Netherlands

FM2B.1 • 10:00 **Invited**

A chip based dual frequency-comb Fourier spectrometer, David G. Lancaster¹; ¹*Laser Physics & Photonics Devices Lab, Univ. of South Australia, Australia*. Our standalone dual-comb platform is based on two mutually-stable mode-locked waveguide lasers integrated into the same glass chip. The inherent low phase-noise of the system provides a robust and high-resolution molecular spectroscopic capability.

FM2B.2 • 10:30

Trace Gas Detection Using a MEMS-Based Portable Fourier Transform Infrared Spectrometer, Junyu Chai^{1,2}, Hongzhi Jia¹, Xiaoxuan Dong², Chuang Huang³, Lei Jiang³, Huikai Xie^{4,2}; ¹*Engineering Research Center of Optical Instrument and System, Univ. of Shanghai for Science and Technology, China*; ²*WIO Technology Co., China*; ³*Honeywell Integrated Technology, China*; ⁴*Univ. of Florida, USA*. A portable Fourier transform infrared spectrometer has been developed based on a piston-scanning MEMS mirror. It is successfully applied for gas detection and a low gas concentration down to 100 ppm has been detected.

FM2B.3 • 10:45

Open Path MIR DCS for Chemical Detection, Gabriel ycas¹, Fabrizio Giorgetta¹, Kevin Cossel¹, Eleanor Waxman¹, Esther Baumann¹, Nathan R. Newbury¹, Ian R. Coddington¹; ¹*NIST, USA*. We demonstrate MIR-DCS across a 1-km open-air path probing the C-H stretch region around 3.2 μm . We show sensitivity to VOC's such as acetone even in the presence of water vapor interference.

Pisces 3

Hyperspectral Imaging and
Sounding of the Environment

10:00–11:45

**HM2C • Hyperspectral Sensing
of Land and Water**

Presider: Michael Yetzbacher; US
Naval Research Lab, USA

HM2C.1 • 10:00 **Invited**

Calibration and validation of optical EO sensors relevance to non-renewable resources environmental monitoring, Cindy C. Ong¹; ¹*Energy, CSIRO, Australia*. Earth Observation (EO) satellite data are the single most important and richest source of environmental information for Australia and are used for a wide range of applications including their use for non-renewable resources environmental monitoring. This talk will focus on calibration and validation of EO optical data illustrated with case histories on their relevance for regulatory compliance.

HM2C.2 • 10:30 **Invited**

Eruptions from UV to TIR: multispectral high-speed imaging of explosive volcanic activity, Jacopo Taddeucci¹, Piergiorgio Scarlato¹, Elisabetta Del Bello¹, Giancarlo Tamburello², Damien Gaudin^{1,3}; ¹*Istituto Nazionale di Geofisica e Vulcanologia, Italy*; ²*Istituto Nazionale di Geofisica e Vulcanologia, Italy*; ³*LMU Univ. of Munich, Germany*. Explosive volcanic eruptions eject a mixture of rock/magma fragments and gases. Ground-based eruption imaging, combining thermal infrared, high-speed visible, and ultraviolet videos, can parameterize ejection dynamics and gas/fragment ratios at the seconds and centimeter scales.

Optics in Solar Energy

10:00–11:45

OM2D • PV beyond Silicon

Presider: Serena Fen Lin;
National University of Singapore,
Singapore

OM2D.1 • 10:00 **Invited**

Light trapping: From Silicon to III-V Solar Cells, Nicholas J. Ekins-Daukes¹; ¹*School of Photovoltaic & Renewable Energy Engineering, UNSW Sydney, Australia*. Light trapping has been long established in silicon but only recently employed for III-V solar cells. To achieve efficient silicon tandem solar cells, light trapping in both are likely to be necessary.

OM2D.2 • 10:30

Optical Anisotropy and Photovoltaic Performance of N-Si/Organic Heterojunction HOT Solar Cells, Hajime Shira^{2,1}, A.T.M. Saiful Islam^{2,1}, Koki Kawamura^{2,1}, Ryo Ishikawa^{2,1}; ¹*Saitama Univ., Japan*; ²*Graduate School of Science and Engineering, Saitama Univ., Japan*. We represent the state-of-art of solution-processed PEDOT:PSS/n-Si heterojunction solar cell. The effect of optical anisotropy of PEDOT:PSS on the photovoltaic performance is demonstrated together with the junction property at PEDOT:PSS/n-Si interface.

OM2D.4 • 10:45

2D Tungsten Disulfide Sheets for Ultralight, Flexible Photovoltaics, Sayan Roy¹, Peter Bermel¹; ¹*Purdue Univ., USA*. 2D nanomaterials have potential to cut the weight of photovoltaics by more than a factor of 100. Here, we explore the potential for tungsten disulfide to serve as a platform for high-efficiency, flexible photovoltaic devices.

Pisces 1

Optics and Photonics for Energy & the Environment

EM2A • Industrial Monitoring I: Energy and Power—Continued

EM2A.5 • 11:00 **Invited**
Photoacoustic H₂S Gas Sensor for SF₆ Decomposition Analysis in an Electric Power System, Lei Dong¹, Xukun Yin¹, Hongpeng Wu¹, Liantuan Xiao¹, Suotang Jia¹, ¹Shanxi Univ., China. A photoacoustic hydrogen sulfide (H₂S) gas sensor for sulfur hexafluoride (SF₆) decomposition analysis in an electric power system was developed. A detection limit of 109 ppb was achieved.

EM2A.6 • 11:30 **Invited**
Diagnostics to study the vibrational excitation kinetics of CO₂ for renewable energy storage, Richard Engel¹, Bart Klarenaar¹, Ana Sofia Morillo-Candas², Maria Grofulovic³, Richard van de Sanden^{4,1}, Olivier Guaitella², ¹Eindhoven Univ. of Technology, Netherlands; ²Ecole Polytechnique-CNRS, France; ³Instituto Superior Tecnico, Portugal; ⁴DIFFER, Netherlands. Time-resolved in situ FTIR spectroscopy and spatiotemporally resolved in situ Raman spectroscopy are used to study the excitation and relaxation of the vibrations of CO₂ and the reduction of CO₂ to CO in a pulsed glow discharge.

Pisces 2

Fourier Transform Spectroscopy

FM2B • Dual Comb and miniaturized-based FTS developments—Continued

FM2B.4 • 11:00 **Invited**
Dual-comb spectroscopic Ellipsometry, Takeshi Yasui^{1,2}, ¹Tokushima Univ., Japan; ²JST, ERATO, Minoshima Intelligent Optical Synthesizer, Japan. Mode-resolved optical-comb spectrum of amplitude and phase, acquired by dual-comb spectroscopy, is applied for polarization-modulation-free, high-precision spectroscopic ellipsometry. Effectiveness of the proposed method is demonstrated in the measurement of a thin-film standard sample.

FM2B.5 • 11:30
Mid-infrared Dual-comb Spectroscopy in An Electrical Discharge, Amir Khodabakhsh¹, Julien Mandon¹, Qing Pan¹, Muhammad Ali Abbas¹, Frans J. M. Harren¹, ¹Dept. of Molecular and Laser Physics, Radboud Univ., Netherlands. We present time-resolved mid-infrared dual-comb spectroscopy of methane in an electrical discharge. The system is capable of detecting the discharge products (ms scale) and also monitoring the relaxation process of methane excited states (μs scale).

FM2B.6 • 11:45
Direct Mid-Infrared Frequency Comb Spectroscopy of Nitrocarburizing Plasma Processes, Norbert Lang¹, Alexander Puth¹, Sarah-Johanna Klose¹, Grzegorz Kowzan², Stephan Hamann¹, Juergen Roepcke¹, Piotr Maslowski², Jean-Pierre H. van Helden¹, ¹Leibniz Inst. for Plasma Science & Technology, Germany; ²Inst. of Physics, Astronomy and Informatics, Nicolaus Copernicus Univ., Poland. We report on mid-infrared broadband direct frequency comb spectroscopy as a novel plasma diagnostic applied to spectroscopic investigations of plasma nitrocarburizing processes. We discuss the parameter-dependent behavior of species like HCN, CH_x, and NH₃.

Pisces 3

Hyperspectral Imaging and Sounding of the Environment

HM2C • Hyperspectral Sensing of Land and Water—Continued

HM2C.3 • 11:00 **Invited**
Far-Infrared emissivity of ice and snow: Resolving the paucity of observational data, Jon E. Murray¹, Helen E. Brindley¹, Juliet C. Pickering¹, Stuart Fox², Axell Wellpott³, Cathryn Fox², Alan Last¹, Chawn Harlow², ¹Dept. of Physics, Imperial College London, UK; ²UK Meteorology Office, UK; ³Facility for Airborne Atmospheric Measurements, UK. Far-Infrared up-welling radiance measurements over Greenland have yielded the first estimates of the emissivity of ice and snow in this spectral region. I describe the complexity of undertaking such work and what the future holds.

HM2C.4 • 11:30
Plant-species identification from only near-surface and internal reflectance spectroscopic data regardless of zenith and azimuth angles, Hanyue Kang¹, Natsumi Kawashima¹, Tomoya Kitazaki¹, Sora Mizutani¹, Ichirou Ishimaru¹, ¹Kagawa Univ., Japan. Any plant species may be distinguished from only two basic spectroscopic data obtained by the orthogonal polarized light illumination method. We demonstrate its viability by obtaining separately the near-surface and internal-reflected light from plant leaves.

Pisces 4

Optics in Solar Energy

OM2D • PV beyond Silicon—Continued

OM2D.5 • 11:00
An optical study of back contacted CIGS solar cells, Nasim Rezaei¹, Olindo Isabella¹, Zeger Vroon², Miro Zeman¹, ¹Delft Univ. Of Technology, Netherlands; ²TNO-Brightlands Materials Center, Netherlands. An optical investigation of ultra-thin CIGS solar cells and guidelines for elimination of optical losses is presented. Then, a novel back contacted structure for CIGS solar cells is suggested and optimized for best implied photocurrent density.

OM2D.6 • 11:15 **Invited**
Probing the Microstructure of Methylammonium Lead Iodide Solar Cells, Tobias Leonhard^{1,2}, Holger Röhm¹, Alexander Schulz^{1,2}, Susanne Wagner^{2,3}, Fabian Altermann¹, Wolfgang Rheinheimer³, Michael J. Hoffmann^{2,3}, Alexander Colmann^{1,2}, ¹Light Technology Inst., Karlsruhe Inst. of Technology, Germany; ²Material Research Center for Energy Systems, Karlsruhe Inst. of Technology, Germany; ³Inst. for Applied Materials – Ceramic Materials and Technologies, Karlsruhe Inst. of Technology, Germany. Using electron backscattered diffraction, we report on the crystal orientation in methylammonium lead iodide thin-films with sub-micrometer resolution. The crystal orientation correlates with the orientation of the ferroelectric polarization as investigated by piezoresponse force microscopy.

12:00–13:00 Lunch, Leo Foyer

EM3A • Sensing of Plasma & Combustion Environments*Presider: Hong Lin; National Inst. of Metrology, China***EM3A.1 • 13:00** **Invited**

Time-resolved dual-comb spectroscopy of laser induced plasmas, R. Jason Jones¹; ¹Univ. of Arizona, USA. We demonstrate time-resolved dual-comb spectroscopy to track the evolution of multiple atomic and ionic species following laser ablation of solids. The approach promises improved plasma characterization and detection confidence in the analysis of solid materials.

EM3A.2 • 13:30

Spectroscopic investigations of plasma nitriding processes using an active screen made of carbon in a model reactor, Juergen Roepcke¹, Stephan Hamann¹, Lukas Kusyn², Igor Burlacov³, Anke Dalke³, Heinz-Joachim Spies³, Horst Biermann³; ¹INP-Greifswald, Germany; ²Masaryk Univ., Czechia; ³TU Bergakademie Freiberg, Germany. H₂-N₂ plasmas were investigated spectroscopically in an active screen nitriding reactor to study the usage of a carbon screen without any additional gaseous carbon precursor.

EM3A.3 • 13:45

On the Chemical Kinetics of HO₂ in a Cold Atmospheric Plasma Jet, Sarah-Johanna Klose¹, Michele Gianella², Stephan Reuter^{1,3}, Press Sioned², Ana Lawry Aguila², Katherine Manfred², Ansgar Schmidt-Bleker¹, Grant Ritchie², Jean-Pierre H. van Helden¹; ¹Leibniz Inst. for Plasma Science & T, Germany; ²Dept. of Chemistry, Univ. of Oxford, UK; ³Dept. of Mechanical and Aerospace Engineering, Princeton Univ., USA. HO₂ is detected in the effluent of an atmospheric pressure plasma jet by cavity ring-down spectroscopy. A reaction kinetics model describing the pathways that determine the HO₂ concentration is in good agreement with the measurements.

Pisces 2

13:00–15:00

HM3C • Recent Advances in Hyperspectral Instruments, Analysis, and Algorithms I*Presider: Akihiko Kuze; Japan Aerospace Exploration Agency, Japan***HM3C.1 • 13:00** **Invited**

Extremely compact hyperspectral cameras of visible and infrared lights for environmental measurements, Ichirou Ishimaru¹, Natsumi Kawashima¹, Hanyue Kang¹, Tomoya Kitazaki¹, Kosuke Nogo¹, Wei Qi¹; ¹Kagawa Univ., Japan. We developed the palm-size 2D-type and beans-size 1D-type Hyperspectral cameras for environmental measurements. To visualize broad-area plankton or chlorophyll distributions using drones, the light-source color correlation method, what was based on polarization, was proposed.

HM3C.2 • 13:30 **Invited**

An Overview of CLARREO Pathfinder and the On-Orbit Calibration Methodology, Paul C. Smith¹, Peter Pilewskie¹, Greg Kopp¹, Bruce Wielicki², Constantine Lukashin²; ¹Lab. for Atmospheric and Space Physics, Univ. of Colorado at Boulder, USA; ²NASA Langley Research Center, USA. CLARREO Pathfinder is a NASA mission to investigate the performance of a highly-accurate hyperspectral imager (350-2300 nm, 0.3% uncertainty) from the International Space Station. The HyperSpectral Imager for Climate Science (HySICS) is cross-calibrated on-orbit via direct measurements of the solar spectral irradiance. It will acquire climate-needed spectral imagery and enable intercalibration of other on-orbit sensors (CERES, VIIRS) through coincident measurements of angle matched Earth scenes.

Energy & the EnvironmentEM3A • Sensing of Plasma &
Combustion Environments—
ContinuedEM3A.4 • 14:00 **Invited**

Laser dispersion spectroscopy for combustion diagnostics, Wei Ren¹; ¹The Chinese Univ. of Hong Kong, Hong Kong. Dispersion spectroscopy has drawn extensive attention in recent years due to its advantages of immunity to laser power fluctuations and large dynamic range. We demonstrate in situ temperature and species measurements in flames using heterodyne phase-sensitive dispersion spectroscopy.

EM3A.5 • 14:30

Parameter Estimation using Wavelength Modulation Spectroscopy Temperature Measurements and Approximate Bayesian Computation, Jason D. Christopher¹, Daniel Petrykowski¹, Torrey R. Hayden¹, Caelan Lapointe¹, Nicholas T. Wimer¹, Siddharth P. Nigam¹, Ian Grooms¹, Peter E. Hamlington¹, Gregory B. Rieker¹; ¹Univ. of Colorado Boulder, USA. We use approximate Bayesian computation (ABC) to estimate parameters in a 3D high-temperature turbulent buoyant jet large-eddy simulation (LES). Wavelength modulation spectroscopy (WMS) provides reference temperature measurements. Parameters provide close agreement between simulation and experiment.

EM3A.6 • 14:45

Measurement of Temperature and Temperature Profile of Micro Flame using Circular Grating Talbot Interferometer, Shilpi Agarwal¹, Chandra Shaker¹; ¹IDDC, Indian Inst. of Technology Delhi, India. We have investigated the Talbot interferometer to measure the temperature and temperature profile of an axisymmetric micro flame. This system is capable of measuring temperature of a large size flame to micro size flame.

Sub-orbital demonstration of the Spatial Heterodyne Observations of Water (SHOW) instrument from NASA's high-altitude ER-2 remote science airplane, Jeffery A. Langille¹, Daniel Letros¹, Adam Bourassa¹, Brian Solheim¹, Fabien Dupont², Doug Degenstein¹, Daniel Zawada¹; ¹Univ. of Saskatchewan, Canada; ²ABB Inc, Canada. The Spatial Heterodyne Observations of Water instrument (SHOW) is a limb-sounding satellite prototype that is being developed to provide high spatial resolution measurements of water vapour in the upper troposphere and lower stratosphere region. In 2017, SHOW flew several flights on NASA's ER-2 airplane, allowing for sub-orbital demonstration of the measurement technique. Here, we present the results from the measurement campaign and examine the sampling capabilities of the instrument.

FM3B.5 • 14:30

Progress and recent developments of the GLORIA infrared limb imager, Erik Kretschmer¹; ¹Karlsruher Institut für Technologie, Germany. GLORIA has been deployed on multiple missions since 2011 with over 500 flight hours on airborne platforms. We give an overview of demonstrated capabilities and some example scientific results and look ahead on coming projects.

FM3B.6 • 14:45

Spectrally resolved radiative observations of the Earth in the Far-Infrared using the Tropospheric Airborne Fourier Transform Spectrometer (TAFTS), Jon E. Murray¹, Juliet C. Pickering¹, Helen E. Brindley^{1,2}, Stuart Fox³, Peter Ade⁴, Carole Tucker⁴, Cathryn Fox³, Chawn Harlow³, Alan Last³; ¹Imperial College London, UK; ²UK National Centre for Earth Observation, UK; ³Met Office, UK; ⁴Cardiff Univ., UK. The Far-Infrared contributes up to 50% of the radiative emission from Earth to space, however, FIR observations are lacking. Satellite instruments are proposed or set for deployment, we discuss the practicalities of supporting these missions with TAFTS.

JM4A • Solar Energy and Energy Storage (E2/SOLAR)

Presider: Klaus Jaeger; Helmholtz-Zentrum Berlin, Germany

JM4A.1 • 15:30 **Invited**

Graphene energy storage devices, Baohua Jia¹; ¹Swinburne Univ. of Technology, Australia. We demonstrate high-performance planar supercapacitors by direct light printing technique. By controlling the nanometric pore size of graphene, the surface area and the mean ionic path can be optimized, which led to supercapacitor performance exceeding the state-of-the-art.

JM4A.2 • 16:00

Systematic study on the interaction between graphene and visible-light responsive photocatalysts, Hassan Samei^{1,2}, Ali A. Sabbagh Alvani¹, Naimeh Naseri³, Bastian Mei²; ¹CPRC, Amirkabir Univ. of Technology, Iran; ²Photocatalytic Synthesis Group, MESA+ Inst. for Nanotechnology, Univ. of Twente, Netherlands; ³Sharif Univ. of Technology, Iran. The basic mechanisms of interfacial interaction, charge transfer/separation and subsequently their influence on the photocatalytic activity of ZnV₂O₇/graphene nanocomposites were comprehensively studied.

JM4A.3 • 16:15

Revisiting Broadband Reflection Suppression by Mie Scatterers: the Role of Electromagnetic Duality, Evgeniia Slivina^{1,2}, Aimi Abass², Derk Bätzner¹, Carsten Rockstuhl^{2,3}, Ivan Fernandez-Corbaton²; ¹Meyer Burger Research AG, Switzerland; ²Inst. of Nanotechnology, Karlsruhe Inst. of Technology, Germany; ³Inst. of Theoretical Solid State Physics, Karlsruhe Inst. of Technology, Germany. The physics behind broadband reflection suppression that high index dielectric nanoparticle arrays can provide is revisited. We demonstrate that antireflective properties are inherently connected to how equal the effective magnetic and electric responses are.

JM4A.4 • 16:30

Influence of 2D non-uniformly gradient motheye structures for absorption improvement in solar energy harvesting, Saraswati Behera¹; ¹Mechanical Engineering, Yonsei Univ., South Korea. Non-uniformly gradient 2D motheye photonic structures are studied to show more than 85% of absorption over a broad solar spectrum (350–1100 nm) and wide angle of incidence for targeted applications in solar energy harvesting.

JM4A.5 • 16:45

Improved Light Trapping in Quantum Dot Solar Cells Using Double-sided Nanostructuring, Farid K. Elsehrawy¹, Timo Aho², Tapio Niemi², Mircea Guina², Federica Cappelluti¹; ¹Dept. of Electronics and Telecommunications, Politecnico di Torino, Italy; ²Lab of Photonics, Tampere Univ. of Technology, Finland. We investigate light trapping in thin-film quantum dot solar cells employing front and back side nanostructuring for antireflection and diffraction, respectively. Simulation results demonstrate a large improvement of the effective quantum dot optical absorption.

Accelerating the Deployment of Renewables in Southeast Asia Special Panel

Urgent action is required to limit global warming. Rapidly developing Southeast Asia, with a population of 600 million, needs to deploy vast amounts of renewable energies to keep carbon emissions under control. In this timely panel discussion, experts from universities, solar companies and government agencies will share their views on how to accelerate the deployment of renewables in Southeast Asia. Aspects covered range from technology & engineering to economics and policies.

Moderator: Kenneth Baldwin, Director, ANU Energy Change Institute, Australian National University, Australia

Panelists:

Christophe Inglin, Managing Director, Energetix Pte Ltd, Singapore
Edwin Khew, Chairman, Sustainable Energy Association of Singapore (SEAS), Singapore
Alan Khor, Head of Engineering, Procurement & Construction, Cleantech Solar, Singapore
Eicke Weber, Berkeley Education Alliance for Research in Singapore, Singapore
Thomas White, Australian National University, Australia

08:30–09:30

JT1A • Keynote I

Presider: Serena Fen Lin, National University of Singapore, Singapore

JT1A.1 • 08:30 **Keynote**

Perovskite-silicon Tandem Solar Cells: Progress, Challenges and Opportunities, Thomas P. White¹; ¹Research School of Engineering, Australian National Univ., Australia. This presentation will review recent highlights and current challenges in the development of high efficiency perovskite-silicon tandem solar cells, and identify pathways for reaching efficiencies of 30% and beyond through optical, material and device engineering.

JT1A.2 • 09:00 **Keynote**

Measuring Atmospheric Carbon Dioxide from the NASA Orbiting Carbon Observatory-2 (OCO-2), David Crisp¹; ¹Jet Propulsion Lab, California Inst. of Technology, USA. NASA's OCO-2 spacecraft has returned observations of atmospheric carbon dioxide (CO₂) since September 2014. These data are being used to study the processes emitting CO₂ into the atmosphere and those absorbing it at the surface.

09:30–10:30

JT2A • Poster Session with Coffee Breaks and Exhibits

JT2A.1

Variability In Transient Climate Response In The MPI Grand Ensemble And Its Relation To The Radiative Effect Of Sea Ice Loss, Andrew E. Dessler¹; ¹Texas A&M Univ, USA. Transient climate response (TCR) is one way to measure sensitivity of the Earth's climate to increasing greenhouse gases. We find that the radiative impact of sea ice plays a key role in TCR uncertainty.

JT2A.2

Space experiment "Climate" on the Russian segment of the ISS and its scientific equipment, Yuri V. Bazhanov¹; ¹PC "Geofizika-Kosmos", Russia. The report presents the composition, technical characteristics and design of scientific equipment, as well as scientific tasks of the Space experiment "Climate" related to the study of the Earth's atmosphere.

JT2A.3

Design and Fabrication of hyperspectral systems with freeform optical elements, Yuri V. Bazhanov¹; ¹PC "SPI "Geofizika-Kosmos", Russia. Design of optical system, containing two-mirror off-axis telescope and Offnerspectrometer with freeform mirror usage is presented in this paper. For of such mirrors "uVo" manufacturing software can be used, allowing fabrication of freeform elements using conventional 3 axis diamond turning machines.

JT2A.4

Design of Triple Layer Antireflection Coatings (ARC) for Industrial Bifacial nFAB Solar Cells, Xia Yan¹, Ning Chen¹, Firdaus Bin Suhaimi¹, Xinxin Gong², Lin Zhang², Xinyu Zhang², Shubham Duttgupta¹; ¹National Univ. of Singapore, Singapore; ²Jinko Solar, China. High efficiency solar cells need to make better use of solar spectrum. The implementation of triple layer antireflection coatings helps to reduce front reflection and allows improvement of absolute ~0.2% efficiency of nFAB solar cells.

JT2A.5

Sunlight Harvesting System for Simultaneous use of Room Indoor Lighting and Water Heating, Mayank Gupta¹, Atul K. Dubey¹, Virendra Kumar¹, Dalip S. Mehta¹; ¹IIT Delhi, India. Utilizing the broad spectrum of Sunlight we present Fresnel lens and single axis tracking based sunlight harvesting system for Indoor lighting and water heating. Sunlight is guided through POF bundle coupled with light diffusing acrylic rod for illumination.

JT2A.6

Light Trapping Enhancement in Perovskite/Silicon Tandem Solar Cells via Optimized PDMS as an Antireflective Layer, Fuhua Hou¹, Can Han¹, Lingling Yan¹, Biao Shi¹, Yi Ding¹, Yuelong Li¹, Ying Zhao¹, Xiaodan Zhang¹; ¹Nankai Univ., China. Three random-pyramid texture PDMS were designed as an antireflection layer in perovskite/silicon tandem solar cells. The P2-PDMS layer exhibit a higher average haze ratio (H) mainly originated from the uneven random distribution.

JT2A.7

Design of Smart Cooling System for Solar Panel on Performance Efficiency with Internet of Things (IoT), Lay-Theng Tan¹; ¹School of Engineering, Republic Polytechnic, Singapore. This paper provides integrated solutions to improve the energy efficiency of solar panel. It is achieved by incorporating a cost-efficient, propulsive and intelligent water cooling system using Raspberry Pi. It also provides cleaning function to remove the dirt on the panel.

JT2A.8

Performances of a CPC Collector Inside in a High Vacuum Flat Panel, Roberto Russo¹, Francesco Di Giamberardino², Matteo Monti², Carmine D'Alessandro^{2,1}, Davide De Maio^{2,1}, Marilena Musto², Vittorio G. Palmieri²; ¹National Research Council of Italy, Italy; ²TVPSolar SA, Switzerland; ³Dipartimento di Ingegneria dell'Informazione, Università di Napoli, Italy. We present the performances of CPC collector designed and optimized to be placed inside high vacuum panels. Results will be compared with performances of a high vacuum flat panel equipped with the best available absorber.

JT2A.9

Angle-Selection with Sub-Unity Index in Solar Cells, Ken Xingze Wang¹; ¹Huazhong Univ of Science and Technology, China. Angle selection/restriction modifies the emission cone of and can improve the limiting efficiency and reduce the material cost for solar cells. This can be realized using a material with an effective sub-unity refractive index.

JT2A.10

ECA (Electrical Conductive Adhesive) Induced Failure On Shingling Module, Juan Wang¹, Zhiqiu Guo¹, Hao Jin¹; ¹Zhejiang Jinkosolar Co.,Ltd., China. We studied Shingling module reliability and found that ECA quality could induce module failure. This work focuses on the influence of the bubbles in the ECA on the reliability of module.

JT2A.11

Solar Energy Actuated Optical Mechanism, Lihui Wang¹, Hongjin Xu¹, Masatoshi Ishikawa¹; ¹Univ. of Tokyo, Japan. An optical system was designed and driven by a shape memory alloy (SMA) actuator. Lenses could collect the solar energy to heat the SMA to realize a mechanical motion and switch the system phase.

JT2A.12

Retrieval optical parameters of atmospheric particles based on active DOAS, Suwen Li¹; ¹Huaibei Normal Univ., China. The active differential optical absorption spectroscopy (DOAS) is developed to measure the optical parameters of atmospheric particles, combining two light paths. With the extinction coefficient, the number size distribution from 0.1 μm to 1.25 μm was retrieved by a step function.

JT2A.13

Enhanced Visible Light Photocatalysis in Titanium Dioxide-Functionalized Nanoporous Anodic Alumina Photonic Crystals, Siew Yee Lim¹, Cheryl Suwen Law¹, Abel Santos¹; ¹Univ. of Adelaide, Australia. Herein, we demonstrate the enhanced photocatalytic performance of a rationally designed nanoporous anodic alumina gradient-index filters functionalized with photoactive titanium dioxide. The photonic efficiency of this composite material improves photocatalytic reactions by 'slow photon' effect.

JT2A.14

Application of Nano-TiO₂ Coating in a Rooftop Hydroponic Farming System, Lay-Theng Tan¹; ¹Republic Polytechnic, Singapore. This paper focuses on the effectiveness of nano-TiO₂ coating on the solar glass in absorbing Ultra-Violet (UV) to improve the plant's growth in a rooftop hydroponics farm system. The parameters to assess the plant growth are diameter/length of the leaf, fresh/dry mass, and moisture content.

JT2A.15

Analysis of the inorganic compounds in PM_{2.5} aerosols in Zhengzhou using ATR-FTIR method, Xiuli Wei¹, Huaqiao Gui¹, Jianguo Liu¹, minguang gao¹, jiaoshi zhang¹, tongzhu yu¹, ying chen¹; ¹Key Lab of Environmental Optics and Technology, Anhui Inst. of Optics and Fine Mechanic, Chinese Academy of Sciences, China. The inorganic compounds in PM_{2.5} aerosols were measured using a FTIR spectroscopy before Chinese New Year in 2014 in Zhengzhou city, China. Combined the data of gaseous pollutants (NO₂ and SO₂) and the air back trajectories to analyze the effect of transport.

JT2A.16

The Measurement of HO₂ by A FAGE Instrument, Yihui Wang^{2,1}, Renzhi Hu¹, Pinhua Xie¹, Hao Chen¹, Fengyang Wang¹, Zhiyan Li¹, Huawei Jin¹; ¹Anhui Inst. of Optics and Fine Mechanics, China; ²School of Environmental Science and Optoelectronic Technology, Univ. of Science and Technology of China, China. An instrument for measuring atmospheric HO₂ has been developed by FAGE technique. A series of experiments have been carried out to characterize the instrument performance and the detection limit of HO₂.

JT2A.17

OH radical field observation based on Fluorescence Assay by Gas Expansion technique, Fengyang Wang², Renzhi Hu¹, Hao Chen¹, Pinhua Xie¹, Yihui Wang^{1,2}, Zhiyan Li^{1,2}, Huawei Jin^{1,2}; ¹Anhui Inst. of Optics and Fine Mechanics, Chinese Academy of Sciences, China; ²Univ. of Science and Technology of China, China. OH radical has an important role in atmosphere, as it is involved in many tropospheric chemical reactions. This paper presents a tropospheric OH radical detection instrument based on Fluorescence Assay by Gas Expansion technique.

JT2A.18

Detection of N₂O Using An External-Cavity Quantum Cascade Laser, Faisal Nadeem¹, Amir Khodabakhsh¹, Julien Mandon¹, Simona Cristescu¹, Frans J. M. Harren¹; ¹Radboud Univ., Netherlands. We developed an EC-QCL-based spectrometer around 8 μm for detection of nitrous oxide. Using wavelength modulation spectroscopy and 2nd harmonic detection, a minimum detection limit of 15 ppbv is achieved in less than 10 s.

LEO Foyer

JT2A • Poster Session—Continued

JT2A.19

Optical Monitoring of N_2O_3 in a Nocturnal Tropospheric Chemical Reaction Process using Quantum Cascade Laser, Weidong Chen¹; ¹Universite du Littoral, France. A spectroscopic instrument based on an external cavity quantum cascade laser was developed for optical monitoring of dinitrogen pentoxide (N_2O_5) at the ppbv-level in a nocturnal tropospheric chemical reaction process in an atmospheric simulation chamber.

JT2A.20

Laser Heterodyne Radiometry for Ground-based Monitoring of GHGs in the Atmospheric Column, Weidong Chen¹; ¹Universite du Littoral, France. A mid-infrared laser heterodyne radiometer was developed for ground-based remote measurements of greenhouse gases (GHGs) in the atmospheric column.

JT2A.21

Precision Two-Photon-Excitation Spectroscopy of Atomic and Molecular Rydberg States, Kenneth G. Baldwin¹, Mitsuhiro Kono², Brian J. Orr², Yabai He³; ¹Australian National Univ., Australia; ²Dept. of Physics and Astronomy, Macquarie Univ., Australia; ³Senri International School of Kwansai Gakuin, Japan. A tunable, narrowband laser system, developed for high-resolution ultraviolet spectroscopy of atoms and molecules and previously applied to two-photon excitation of rare-gas atoms, now offers prospects for new measurements of atmospheric molecules such as oxygen.

JT2A.22

Interference-free Measurements of Environmental NO_2 by Laser Photoacoustic Spectroscopy, Weidong Chen¹; ¹Universite du Littoral, France. A photoacoustic spectroscopy based NO_2 sensor was developed for measurement of ambient NO_2 with a sensitivity of about 0.4 ppb (SNR=1) in 1 min, which was validated with side-by-side measurements using a referenced NO_x analyzer.

JT2A.23

Phase Transformation in Size-Evolved Solution-Processed Pure-Inorganic Lead Halide Perovskite, Xinhai Zhang¹, Huafeng Shi¹; ¹Southern Univ. of Sci. & Tech., China. We report the crystal structure phase transformation phenomenon occur in size-evolution of solution-processed pure-inorganic lead halide perovskite.

JT2A.24

Development of a fiber-optic particle size measurement system based on dynamic light scattering technique, Huaqiao Gui^{1,2}, Huangjin Wang³, Wei Wan³, Fajun Yu³, Jianguo Liu^{1,2}, Liang Lü⁴; ¹Anhui Inst Optics & Fine Mech, CAS, China; ²CAS Center for Excellence in Regional Atmospheric Environment, Chinese Academy of Sciences, China; ³State Key Lab of Transducer Technology, Chinese Academy of Sciences, China; ⁴Key Lab of Opto-Electronic Information Acquisition and Manipulation of Ministry of Education, Anhui Univ., China. In this paper, a fiber-optic particle size measurement system based on dynamic light scattering(DLS) is developed. The system uses the classic 90° particle size measurement technique, which has high sensitivity and precision.

JT2A.25

Dependent Scattering Effect on Light Absorption in Random Media, Boxiang Wang¹, Changying Zhao¹; ¹Shanghai Jiao Tong Univ., China. We examine the effect of dependent scattering on absorption in disordered media consisting of highly scattering scatterers. The present work is of practical importance in modeling light absorbance in random media, for applications like solar energy concentration, micro/nanofluids, etc.

JT2A.26

Use of Lock-in Detection in Dual-Comb Spectroscopy, Hidenori Koresawa^{1,2}, Kyuki Shibuya^{1,2}, Akifumi Asahara^{3,2}, Takeo Minamikawa^{1,2}, Kaoru Minoshima^{3,2}, Takeshi Yasui^{1,2}; ¹tokushima Univ., Japan; ²JST, ERATO MINOSHIMA Intelligent Optical Synthesizer, Japan; ³The Univ. of Electro-Communications, Japan. We present a method to selectively measure a mode-resolved spectrum of optical frequency comb at a specific frequency by introducing a lock-in detection in dual-comb spectroscopy.

JT2A.27

Measurement of atmospheric column concentration of CO_2 using near infrared laser heterodyne radiometer, Hao Deng¹, Chenguang Yang¹, Zhenyu Xu¹, Ruifeng Kan¹; ¹Anhui Inst of Optics Fine Mechanics, China. A near infrared laser heterodyne radiometer has been developed for measuring atmospheric column concentration of CO_2 . The results have been compared with that of ground-based fourier transform spectrometer in Hefei and show good agreement.

JT2A.28

3D Cloud Microphysics by Combining the Hyperspectral Imaging Spectrometer specMACS with Active Remote Sensing Instruments, Lucas C. Höppler¹, Tobias Kölling¹, Felix Gödde¹, Manuel Gutleben², Marek Jacob¹, Tobias Zinner¹, Bernhard Mayer¹; ¹Ludwig Maximilian University of Munich, Germany; ²Deutsches Zentrum für Luft- und Raumfahrt, Institut für Physik der Atmosphäre, Germany. A new hyperspectral imaging spectrometer makes it possible to combine information from lidar, radar, and microwave radiometer. 3D clouds with measured micro- and macrophysical quantities are then created. The aim is to reduce forecast uncertainties in the future.

JT2A.29

Cavity-Enhanced Complex Refractive Index Spectroscopy of Entire Molecular Bands Using a Frequency Comb, Alexandra C. Johansson¹, Lucile Rutkowski¹, Anna Filipsson¹, Thomas Hausmaninger¹, Gang Zhao^{1,2}, Ove Axner¹, Aleksandra Foltynowicz¹; ¹Umea Universitet, Sweden; ²Inst. of Laser Spectroscopy, Shanxi Univ., China. We demonstrate broadband calibration-free complex refractive index spectroscopy of entire molecular bands by direct measurement of transmission modes of a Fabry-Perot cavity using frequency comb-based Fourier transform spectrometer with sub-nominal resolution.

JT2A.30

Time- and Frequency-Resolved Fluorescence with a Single TCSPC Detector via Fourier-Transform Spectroscopy, Antonio Perri^{1,2}, Fabrizio Preda^{1,2}, John Gaida³, Andrea Farina¹, Cosimo D'Andrea¹, Giulio Cerullo^{1,2}, Dario Polli^{1,2}; ¹Politecnico di Milano, Italy; ²NIREOS s.r.l., Italy; ³4th Physical Inst., Germany. We introduce a broadband single-pixel time-resolved fluorescence spectrometer comprising an ultra-stable common-path interferometer based on birefringence and a single-pixel time-resolved detector. It shows better sensitivity, throughput and spectral/temporal resolution than commercial instruments.

JT2A.31

A Comparison of two sampling and processing methods in FT-IR Spectrometer, Yan Li¹, Jingjing Tong¹, minguang gao¹, Jun Chen¹, Xiangxian Li¹, Sheng Li¹, Yaping Wang¹, Xin Han¹, Chuling Deng¹, Jiangting Wu¹, Jianguo Liu¹; ¹Anhui Inst of Optics Fine Mechanics, China. The laser triggered sampling method and the fourier interpolative sampling method based on the Brault algorithm are compared. The results show that the fourier interpolative sampling method has lower detection limit and better detection accuracy.

JT2A.32.

Study of defects in Sb2Se3 solar cells via admittance spectroscopy, Xiaobo Hu¹, Jiahua Tao¹; Shaoqiang Chen¹; Junhao Chu¹; East China Normal University, China. Defects properties in Sb2Se3 solar cells were studied in detail by admittance measurements. Correlations of defects properties to the performance of the solar cells have been discussed.

Pisces 1

Optics and Photonics for
Energy & the Environment

10:30–12:30

ET3A • Atmospheric Sensing of Clouds & Aerosols

Presider: Iftach Klapp; ARO-
Volcani Center, Israel

ET3A.1 • 10:30

Vertical Characteristics of Aerosols in Lower Troposphere during a Haze Episode in Hinterland of YRD, Jie Wang^{1,2}, Tianshu Zhang¹, Wengqing Liu¹, Jianguo Liu¹, Xueping Wan²; ¹Key Lab of Environmental Optics and Technology, Anhui Inst. of Optics and Fine Mechanics, China; ²Wuxi CAS Photonics Co. Ltd, China. Vertical characteristics and mechanisms of pollution in lower troposphere in Hinterland of YRD region was studied with a profile-analysis method. Lidar was proved to be an effective tool for the further study of complex pollution in China.

ET3A.2 • 10:45

A low cost sky-scanning device as centralized sensor for real-time light control in building management application, Marshal Maskarenji¹, Rangan Banerjee¹, Prakash C. Ghosh¹; ¹Indian Inst. of Technology Bombay, India. A low-cost LDR-based angular sky-luminance measurement device is proposed as a centralized sensor for predicting real-time illuminance distribution in building interiors over a wide district, for application in centralized light control.

ET3A.3 • 11:00 **Invited**

Monitoring of climate-change related aerosol by laser absorption spectroscopy, Weidong Chen¹; ¹Laboratoire de Physicochimie de l'Atmosphère, Université du Littoral Côte d'Opale, France. We will present our recent developments and applications of laser-based spectroscopic instruments to monitoring of climate-change related aerosols, which involve photoacoustic spectroscopy (PAS) and broadband cavity enhanced absorption spectroscopy (BBCEAS).

ET3A.4 • 11:30

Optical and Geometrical Properties of Cirrus Clouds over the Tibetan Plateau Measured by Lidar and Radiosonde Sounding at the Summertime in 2014, Guangyao Dai¹, Songhua Wu^{1,2}, Xiaoguan Song^{1,2}, Liping Liu³; ¹Ocean Univ. of China, China; ²Lab for Regional Oceanography and Numerical Modeling, Qingdao National Lab for Marine Science and Technology, China; ³Lab of Severe Weather, Chinese Academy of Meteorological Science, China. Optical and geometrical characteristics of the cirrus over Naqu, the Tibetan Plateau were determined with lidar and radiosonde. The temperature dependences of the cirrus characteristics were analyzed. The formation of cirrus clouds was investigated.

Pisces 2

Fourier Transform
Spectroscopy

10:30–12:30

FT3B • Far-IR Observatories and FTS Spectroscopy

Presider: Sheng-Cai Shi; Purple
Mountain Observatory, China

FT3B.1 • 10:30 **Invited**

Progress Towards a Far-Infrared Spatial/Spectral Interferometry Lab Testbed Instrument, Locke D. Spencer¹, Chris Benson¹, Jeremy P. Scott¹, Geoffrey R. Sitwell¹, Adam Sundberg¹, Vince F. Weiler¹, David A. Naylor¹; ¹Physics & Astronomy, Univ. of Lethbridge, Canada. Characterization results are presented for a double-Fourier spatial/spectral Lab interferometer. This instrument is a testbed platform for developing imaging techniques, data processing algorithms, and component characterization for space-based astronomical applications in the far-infrared.

FT3B.2 • 11:00

Atmospheric Windows from Dome-A Antarctica for High Angular Resolution Terahertz Astronomy, Hiroshi Matsuo¹, Sheng-Cai Shi², Scott Paine³, Qijun Yao², Zhenhui Lin²; ¹National Astronomical Observatory Japan, Japan; ²Purple Mountain Observatory, China; ³Smithsonian Astrophysical Observatory, USA. FTS measurements of atmospheric transmission spectra from Dome A revealed numerous windows throughout terahertz frequencies, and their stabilities are analyzed. Terahertz telescopes and HBT-type intensity interferometry can be used for high angular resolution terahertz astronomy.

FT3B.3 • 11:15

Terahertz Atmospheric Transmission Measured at Ali with a Fourier Transform Spectrometer, Wei MIAO¹, Zhenhui Lin¹, Sheng Li¹, Ming Yao¹, Bowen Fan¹, Yue Geng¹, Shaoliang Li¹, Qijun Yao¹, Shengcai Shi¹; ¹Purple Mountain Observatory, China. We report measurements of the atmospheric transmission of Tibet's Ali at 0.75-15 THz with a Fourier transform spectrometer from 2 December 2017 to 30 April 2018. The details of the measurement results will be presented.

FT3B.4 • 11:30 **Invited**

Dual-Comb Electric Field Sampled Infrared Spectroscopy, Scott A. Diddams¹; ¹NIST, USA. We generate bright, super-octave infrared combs in the molecular fingerprint region using intra-pulse difference frequency generation. Dual-comb electro-optic sampling is used to map the full infrared electric field with temporal dynamic range of 10⁶.

Pisces 3

Optics in Solar Energy

10:30–12:30

OT3C • Silicon PV Technology

Presider: Olindo Isabell;
Technische Universiteit Delft,
Netherlands

OT3C.1 • 10:30 **Invited**

On the near-infrared parasitic absorption in large-area monoPoly™ silicon solar cells, Shubham Duttagupta², Naomi Nandakumar¹, John Rodriguez¹; ¹Solar Energy Research Inst. of Singapore (SERIS), National Univ. of Singapore (NUS), Singapore. Crystalline silicon (c-Si) solar cells with monofacial polysilicon-based passivated contacts (monoPoly cells) may have high parasitic absorption at near-infrared (NIR) wavelengths. In this work, we show that NIR absorption can be significantly suppressed in monoPoly cells such that it is comparable to standard reference cells.

OT3C.2 • 11:00

Rear-side dielectric passivation: Optical design considerations to fabricate higher efficiency industrial p-type mc-Si PERC solar cells, Donny J. Lai¹, Chuan Seng Tan¹, Pun Chong Ang¹, Zhi Ming Kam¹, Armin G. Aberle¹, Ying Huang¹; ¹SERIS, Singapore. Higher reflectance of rear-side dielectric passivation stack, at the wavelength of the laser source used for ablation, reduces laser-induced damage and improves open-circuit voltage of the PERC solar cells.

OT3C.3 • 11:15

Improvement in bifaciality of Industrial nFAB Solar Cells by Alkaline Treatment, Ning CHEN¹, Xia Yan², Firdaus Bin Suhaimi¹, Lin Zhang², Xinxin Gong², Xinyu Zhang², Shubham Duttagupta¹; ¹SERIS, National Univ. of Singapore, Singapore; ²Zhejiang Jinko Solar Co. Ltd., China. We introduced alkaline treatment for the rear side of bifacial solar cells to improve rear side optical performance. With additional alkaline treatment, rear J_c of nFAB cells increased by ~4mA/cm², and over 96% bifacial factor achieved.

OT3C.4 • 11:30

Small-area p-type PERC Silicon Solar Cells for Tandem Applications, Maung Thway^{1,2}, Tianyuan Liu¹, Mei Huang¹, Cangming Ke¹, Xin Ren Ng^{1,2}, Balaji Nagarajan¹, Xia Yan¹, Shubham Duttagupta¹, Rolf Stangl¹, Soo Jin Chua², Armin G. Aberle^{1,2}, Serena Fen Lin¹; ¹Solar Energy Research Inst. of Singapore, Singapore; ²National Univ. of Singapore, Singapore. Due to the small area of thin-film top cell candidates, the fabrication of small-area p-type silicon passivated emitter and rear cells (PERC) is investigated by scaling down from 6-inch-wide solar cells fabricated using industrial tools.

ST3D • Perovskite and Metal Halide Emitters

Presider: Qihua Xiong; Nanyang
Technological Univ., Singapore

ST3D.1 • 10:30 **Invited**

Luminescent Low-Dimensional Organic Metal Halide Hybrids, Biwu Ma^{1,2}; ¹Chemistry and Biochemistry, Florida State Univ., USA; ²Materials Science and Engineering Program, Florida State Univ., USA. In this talk, I will discuss our work on the development of photoactive organic metal halide hybrids with low dimensional structures at the molecular level, which can act as emitters for efficient light emitting diodes.

ST3D.2 • 11:00 **Invited**

Stability Enhancement in Perovskite Light-Emitting Materials, Zhi Kuang Tan¹; ¹National Univ. of Singapore, Singapore. Perovskite semiconductors have demonstrated strong luminescence and good color performance in light-emitting devices. However, they degrade upon exposure to moisture and heat, which limits their practical application. In this talk, we will discuss several new approach towards enhancing the stability of perovskite materials, and demonstrate their application in functional devices.

ST3D.3 • 11:30

Arrays of Multi-Color Emitting Cesium Lead Halide Perovskite Nanocrystals and Efficient White Light Generation by Tailored Anion Exchange Reactions and Electrohydrodynamic Jet Printing, Yemliha Altintas¹, Ilker Torun², Ahmet Faruk Yazici¹, Emre Beskacak¹, Serdar Onses², Evren Mutlugun¹; ¹Abdullah Gul Univ., Turkey; ²Univ., Erciyes, Turkey. We employ highly efficient and narrow band emitter Cesium-lead-halide perovskite nanocrystals, optimized by the anion exchange method, for efficient white light generation by patterning multiple lines of different colors via proposed electrohydrodynamic jet printing.

President: Scott Paine; Harvard-Smithsonian Ctr for Astrophysics, USA

FT4B.1 • 13:30 **Invited**

Multi-comb technique for metrological applications with coherent control of optical pulse train, Kaoru Minoshima^{1,2}, Akifumi Asahara^{1,2}; ¹1-5-1 Chofugaoka, Univ. of Electro-Communications, Japan; ²JST, ERATO MINOSHIMA Intelligent Optical Synthesizer (IOS), Japan. Tailoring relative carrier envelope phase and repetition frequency in the multi-comb source were utilized for versatile coherent control of optical pulse train. Rapid polarization-modulated pulse train and optical vortex comb were experimentally demonstrated.

FT4B.2 • 14:00

An Ultrafast Electro-Optic Dual Comb for Linear and Nonlinear Spectroscopy, David Carlson¹, Daniel Hickstein¹, Scott A. Diddams^{1,2}, Scott Papp^{1,2}; ¹NIST, USA; ²Univ. of Colorado, USA. We report on 10-GHz electro-optic frequency-comb technology with broad bandwidth enabled by nanophotonic supercontinuum. We demonstrate high-speed, dual-comb linear spectroscopy on various gases and coherent anti-Stokes Raman spectroscopy on various solids.

FT4B.3 • 14:15

Open-Path Dual Frequency Comb Spectroscopy Applied to Source Quantification, Eleanor Waxman¹, Kevin Cossel¹, Fabrizio Giorgetta¹, Eli Hoenig¹, Gar-Wing Truong¹, William Swann¹, Ian R. Coddington¹, Nathan R. Newbury¹; ¹NIST, USA. We combine a gaussian plume model with dual-comb spectrometer (DCS) data to quantify both a localized leak, by measuring to a flying retroreflector, and distributed traffic carbon emissions, by differential path measurements over a city.

FT4B.4 • 14:30 **Invited**

Massively parallel sensing of trace molecules and their isotopologues with broadband subharmonic mid-infrared frequency combs, Konstantin L. Vodopyanov¹; ¹Univ. of Central Florida, CREOL, USA. We use a pair of highly-coherent GaAs subharmonic OPOs with instantaneous span 3.1-5.5 μm to demonstrate fast acquisition of 350,000 mode-resolved spectral data points and perform parallel detection in a mixture of 22 molecular species.

13:30–15:30

OT4C • Nano-Structures for Solar Cells

President: Peter Bermel; Purdue Univ., USA

OT4C.1 • 13:30 **Invited**

Bringing Light to Solar Absorbers: Nano- and Microoptical Concepts for Chalcopyrites and Beyond, Martina Schmid^{1,2}, Phillip Manley², Guanchao Yin²; ¹Universität Duisburg-Essen, Germany; ²Helmholtz-Zentrum Berlin, Germany. The improved incoupling of light to solar absorbers is shown via the examples of light concentration on Cu(In,Ga)Se₂ micro cells, SiO₂ nanoparticles underneath ultrathin Cu(In,Ga)Se₂ and TiO₂ nanostructures on top of silicon photoelectrodes.

OT4C.2 • 14:00 **Invited**

Resonant and non-resonant absorption and scattering of light in III-V semiconductor nanowire arrays, Nicklas Anttu¹; ¹Dept. of Electronics and Nanoengineering, Aalto Univ., Finland. III-V semiconductor nanowire arrays show promise for both single-junction and tandem solar cells. We discuss how resonant and non-resonant optical effects can be used for designing and optimizing the performance in such applications.

OT4C.3 • 14:30

Interface Modification in Type-II ZnCdSe/Zn(Cd)Te QDs for High Efficiency Intermediate Band Solar Cells, Vasilios Deligiannakis^{1,3}, Siddharth Dhomkar¹, Marcel Claro¹, Igor L. Kuskovsky^{4,3}, Maria Tamargo^{1,2}; ¹The City College of New York, USA; ²The Graduate Center of the City Univ. of New York, USA; ³The Graduate Center of the City Univ. of New York, USA; ⁴Physics, Queens College, CUNY, USA. A new growth sequence of ZnCdSe/Zn(Cd)Te QDs is developed, so to avoid formation of a parasitic strain inducing ZnSe interfacial layer. This allows for simplified intermediate band solar cell device that yields higher quality material.

Solid-state Lighting

13:30–15:45

ST4D • VCEs and Other Lasers

President: Caroline Murawski; Univ. of St. Andrews, UK

ST4D.1 • 13:30 **Invited**

An emerging field of nanocrystal optoelectronics: all-colloidal nanocrystal lasers of quantum dots to wells, Vino Prabarakan¹; ¹NTU Singapore, Singapore. Solution-processed semiconductor nanocrystals have attracted great interest in photonics including color conversion and enrichment in quality lighting and display backlighting. Optical properties of these colloidal nanocrystals can be conveniently controlled by tailoring their shape, composition, and size in an effort to realize high-performance light generation and lasing.

ST4D.2 • 14:00

Spherical Approximation for combination of Mechanical Deformation & Optical Path Difference thermal lenses in Nd: YAG slab amplifier, ehsan tanhaee^{1,3}, Mohamad Mahdi Majidof^{1,4}, Seyed Hassan Nabavi², Farshad Abedzadeh¹, Mohana Najafy¹, Seyedasan Seyedzamani⁵; ¹Iranian National Center for Laser Scienc, Iran; ²Nano Lab, Tarbiat Modares Univ., Iran; ³Photonics Dept., Nano Lab, Tehtan Univ., Iran; ⁴Shahidbeheshti Univ., Iran; ⁵Elmosanat Univ., Iran. We pave the way for preconception of thermal lens by amalgamation of Mechanical Deformation and Optical Path Difference via Spherical Approximation with analytical and experimental results at Nd:YAG slab amplifier up to 420W pump power.

ST4D.3 • 14:15 **Invited**

Carrier Dynamics and Lasing with Colloidal Quantum Wells, Matthew A. Pelton¹; ¹Univ. of Maryland, Baltimore County, USA. The dynamics of carriers in colloidal semiconductor nanocrystals are central to their applicability in light-emitting devices and lasers. Semiconductor nanoplatelets, or colloidal quantum wells, support unique and promising carrier dynamics, particularly reduced Auger recombination.

OT4C.4 • 14:45

Engineering Efficient, Broadband Upconversion Core/Rod/Emitter Semiconductor Nanostructures, Eric Y. Chen¹, Jill M. Cleveland¹, Christopher C. Milleville¹, Kyle R. Lennon¹, Jing Zhang¹, James Bork¹, Joshua M. Zide¹, Matthew F. Doty¹; ¹Univ. of Delaware, USA. We characterize upconversion (UC) photoluminescence (PL) in semiconductor quantum dot/rod/emitter nanostructures using one- and two-color cw excitation. We engineer improvements in UC quantum efficiency to 3% of the PL emission efficiency.

OT4C.5 • 15:00 **Invited**

IR-Emitting quantum dots for luminescent solar concentrators, Zhi Kuang Tan¹; ¹National Univ. of Singapore, Singapore. Luminescent solar concentrator (LSC) is a promising technology for building-integrated photovoltaics. This talk will cover the synthetic methodology of heavy-metal free IR emitting quantum dots, specifically designed for LSC applications. The new quantum dots possess broad absorption across the entire visible spectrum, and emits in the IR, making them neutral colored and useful for solar windows.

ET5A • Industrial Monitoring II: Environmental Sensing

Presider: Lucile Rutkowski; *Inst. of Physics of Rennes, France*

ET5A.1 • 16:00 **Invited**

Multispecies DIAL remote gas detection using nested cavity optical parametric oscillators, Julie Armougom¹, Thomas Hamoudi¹, Jean-Baptiste Dherbecourt¹, Jean-Michel Melkonian¹, Antoine Godard¹, Myriam Raybaut¹; ¹DPHY, Onera, The French Aerospace Lab, France. Multispecies remote gas detection is of prime interest for environmental monitoring to security applications. We present here widely-tunable optical parametric sources, based on specific amplified nested-cavity optical parametric oscillator architectures, implemented for multi-species DIAL.

ET5A.2 • 16:30

QCL Absorption Spectroscopy for Lightweight and Multi-Species Environmental Applications, Lukas Emmenegger¹, Badrudin Stanicki¹, Manuel Graf¹, Philipp Scheidegger¹, Morten Hundt¹, Jerome Faist², Filippos Kapsalidis², Herbert Looser¹, Mehran Shahmohammadi², Béla Tuzson¹; ¹EMPA, Switzerland; ²ETHZ, Switzerland. MIR spectroscopy using QCLs allows sensitive, selective, and fast detection of trace-gases. Recent developments, including dual-wavelength QCLs and segmented circular optical cells, create tantalizing options for drone-based and multi-species environmental analysis.

ET5A.3 • 16:45 **Invited**

Laser spectroscopy for the monitoring of radioactive emissions from nuclear facilities, Guillaume Genoud¹; ¹MIKES Metrology, VTT Technical Research Centre of Finland Ltd., Finland. Mid-infrared cavity ring-down spectroscopy is applied to the detection of long-lived radioisotopes. A high sensitivity is achieved while providing on-line measurement capabilities, which is not possible with currently used techniques such as liquid scintillation counting. Examples related to the detection of radiocarbon will be presented, as it is one of the main sources of radioactive gas emissions in nuclear facilities, where it can be released in the form of carbon dioxide or methane.

FT5B • Measurements of the Earth's Atmosphere: Satellite and Ground-based Systems

Presider: Isamu Morino; *NIES, Japan*

FT5B.1 • 16:00 **Invited**

The Tropospheric Emission Spectrometer: From Discovery Mission to Earth System Sounding, Kevin W. Bowman^{1,2}; ¹Jet Propulsion Lab, USA; ²Joint Inst. for Regional Earth System Science and Engineering, Univ. of California, Los Angeles, USA. The Tropospheric Emission Spectrometer (TES) was launched in 2004 and decommissioned in February 2018. We show how TES measurements have altered our understanding of atmospheric composition and its relationship to the Earth System.

FT5B.2 • 16:30

Investigating N₂O produced in the mesosphere – lower thermosphere and its transport to the middle atmosphere, Patrick E. Sheese¹, Kaley A. Walker¹, Chris D. Boone², Monika Andersson³, Daniel Marsh⁴, Christopher Kelly⁵, Wuhu Feng⁵, Martyn Chipperfield⁵, John Plane⁵; ¹Univ. of Toronto, Canada; ²Univ. of Waterloo, Canada; ³Finnish Meteorological Inst., Finland; ⁴National Center for Atmospheric Research, USA; ⁵Univ. of Leeds, UK. This paper will describe Atmospheric Chemistry – Experiment Fourier Transform Spectrometer (ACE-FTS) N₂O measurements in the middle atmosphere along with its production mechanisms and long-term variation. Comparisons with model N₂O simulations will also be discussed.

FT5B.3 • 16:45

An Application of Extractive FTIR for Monitoring Greenhouse Gas Emissions, Chuling Deng^{1,2}, Jingjing Tong¹, Minguang Gao¹, Xiangxian Li¹, Yan Li¹, Jianguo Shi¹, Yueqin Li¹; ¹Key Lab of Environmental Optics and Technology, Anhui Inst. of Optics and Fine Mechanics, China; ²Univ. of Science and Technology of China, China. The greenhouse gas emissions CO₂, CH₄, along with the pollutant CO were continually monitored with extractive FTIR. The results show that extractive FTIR is a direct, reliable and effective method of greenhouse gas monitoring.

FT5B.4 • 17:00 **Invited**

IASI satellite observations: best-of 2017-2018, Sarah Safieddine¹, Cathy Clerbaux¹, Anne Boynard¹, Maya George¹, Juliette Hadji-Lazarou¹, Viatte Camille¹, Lieven Clarisse², Martin Van Damme², Pierre-Francois Coheur²; ¹LATMOS-IPSL, Paris, France; ²ULB, Belgium. This talk presents the latest results of the IASI instruments: we talk about what can be achieved in terms of pollutants monitoring, such as ozone, carbon monoxide, ammonia, sulfur dioxide, and we show the skin temperature product and the urban heat islands detected by IASI.

OT5C.1 • 16:00 **Invited**

Using Machine Learning to Rapidly Diagnose the Root Causes of Underperformance in Early-Stage Solar Cells, Tonio Buonassisi¹; ¹Singapore-MIT Alliance for Research & Technology, Singapore. We use Bayesian inference in combination with rapid non-destructive current-voltage testing to infer performance-limiting bulk and interface properties in early-stage solar cell devices, directing our process-optimization bandwidth more efficiently.

OT5C.2 • 16:30

Rigorous Wave-Optical Simulation of Photon Recycling in Nanostructured Perovskite Solar Cells, Stefan Nanz¹, Raphael Schmager¹, Aimi Abass¹, Muluneh Abebe¹, Guillaume Gormard¹, Ulrich W. Paetzold¹, Carsten Rockstuhl¹; ¹Karlsruhe Inst. of Technology, Germany. We present a rigorous optical simulation of photon recycling in a nanostructured perovskite layer stack resembling a solar cell. Relevant emission characteristics such as the fraction of recycled light and far-field angular spectrum are deduced.

OT5C.3 • 16:45

Distinguishing Fabry-Perot from guided resonances in thin periodically-textured silicon absorber., Hamed Ahmadpanahi¹, Robin Vismara¹, Olindo Isabella¹, Miro Zeman¹; ¹TU Delft, Netherlands. Total electric field in a periodic thin-film structure is described by its Fourier coefficients. These coefficients can be used to calculate the share of different resonances in total absorption in the structure.

OT5C.4 • 17:00

3D Numerical Analysis of Enhanced Localized Surface Plasmon Resonance via AuNPs/ZnONRs Hybrid Structure, So Yun Lee¹, Jae Ryoum Youn¹, Young Seok Song²; ¹Seoul National Univ., South Korea; ²Dankook Univ., South Korea. Enhanced localized surface plasmon resonance (LSPR) is investigated by utilizing AuNPs/ZnONRs hybrid nanostructure. The structure is selected based on the numerical prediction which confirms the synergistic effects of AuNPs/ZnONRs for enhancing LSPR-induced photophysical processes.

Micro-photoluminescence Measurements and Analysis of Low Efficiency in Green Light-Emitting Diodes, Sang Youp Yim¹; ¹Gwangju Inst. of Science & Technology, South Korea. Light-emitting diodes suffer low efficiency in the green region, a phenomenon known as the green gap. We performed micro-photoluminescence measurements and analysis of the carrier generation/annihilation mechanism which give insight into the green gap problem.

18:00–19:30 Conference Reception, Leo 3&4

08:30–10:00

JW1A • Keynote II

Presider: Qihua Xiong, Nanyang Technological University, Singapore

JW1A.1 • 08:30 **Keynote**

HITRAN2016 and Beyond: Reference Molecular Spectroscopy in the XXI Century, Ioulia Gordon¹, Laurence Rothman¹, Roman Kochanov¹, Yan Tan¹, Christian Hill²; ¹Harvard-Smithsonian Center for Astrophysics, USA; ²IAEA, Austria. The most recent edition of the HITRAN spectroscopic database (HITRAN2016) will be presented at the meeting including new and improved data, structure, efficient web interface at www.hitran.org, and the HITRAN Application Programming Interface (HAPI).

JW1A.2 • 09:00 **Keynote**

Recent Advances in Flexible Electronics, Wei Huang¹; ¹Shaanxi Inst. of Flexible Electronic, Northwestern Polytechnic Univ., China. In the past decades, organic optoelectronics has made great progress both in fundamental studies and commercial applications because of their excellent properties, such as solution processable, printable, flexible, low-cost and able to be made at large area. Our recent work is devoted to the development of high-performance organic semiconductors for optoelectronics. We will present our recent advancement on rational molecular design of organic semiconductors for light-emitting diodes, lasers, memories, chemo-/biosensors, and latest research results about ultralong organic phosphorescence, light-emitting perovskite and color display technologies.

JW1A.3 • 09:30 **Keynote**

Advances and Advantages of the Fourier Transform Spectrometer (FTS) for infrared remote sensing in support of Numerical Weather Prediction (NWP) and establishing a longterm record of climate trends, Henry E. Revercomb¹; ¹Univ. of Wisconsin-Madison, USA. For global observing systems that require a significant number of individual spacecraft and sensors, it is highly advantageous to have observations that are sensor independent with respect to spectral properties and instrument responsivity. FTS sensors are especially well suited to achieving this goal.

Pulsed laser Q-switched by graphene on silicon waveguide and ultra-low self-start threshold power realization, Shaodong Hou¹, Guoqin Liu¹, Jinyan Li¹, Luyun Yang¹, Haiqing Li¹, Jinggong Peng¹, Nengli Dai¹, Yi Wang¹; ¹*Huazhong Univ of Science and Technology, China*. A pulsed fiber laser Q-switched by graphene laying on silicon waveguide is firstly demonstrated. Patterned transfer technology is firstly utilized for pulsed lasing. The power triggering saturable absorption is calculated to be as low as 0.11 mW.

EW2A.4 • 11:30 **Invited**

Trace Gas Spectroscopy on a Chip with Mid-Infrared Photonic Waveguides, Jana Jagerská¹, Marek Vlček¹, Vinita Mittal², Senthil Murugan Ganapathy²; ¹*Physics and Technology, Ulf The Arctic Univ. of Norway, Norway*; ²*ORC, Univ. of Southampton, UK*. Mid-infrared (MIR) laser absorption spectroscopy in combination with specially designed photonic waveguides and on-chip pre-concentration can realize sensitive and selective trace gas sensors with detection limits in ppb range.

EW2A.5 • 12:00

Mid-infrared Spectroscopy Using Supercontinuum Sources: Towards Field Applications, Amir Khodabakhsh¹, Qing Pan¹, Khalil Esami Jahromi¹, Frans J. M. Harren¹; ¹*Dept. of Molecular and Laser Physics, Radboud Univ., Netherlands*. We present our recent results in the development of mid-infrared spectroscopy systems based on supercontinuum sources for two different field applications: airborne monitoring of atmospheric pollutants and field quality control of agricultural products.

EW2A.6 • 12:15

Interband Cascade Laser-based Dual-Comb Spectroscopy for Methane Sensing, Jonas Westberg¹, Lukasz A. Sterczewski^{1,2}, Mahmood Bagheri², Clifford Frez², Igor Vurgaftman³, Chadwick L. Canedy³, William Bewley³, Charles D. Merritt³, Chul Soo Kim³, Mijin Kim⁴, Jerry R. Meyer³, Gerard Wysocki¹; ¹*Dept. of Electrical Engineering, Princeton Univ., USA*; ²*Jet Propulsion Lab, USA*; ³*Naval Research Lab, USA*; ⁴*KeyW Corp, USA*. We demonstrate methane and hydrogen chloride measurements around 3.6 μm using dual-comb spectroscopy with free running interband cascade laser frequency combs and a 76 m astigmatic Herriott multipass cell.

Spectroscopy

FW2B • Satellite Measurements of the Earth's Atmosphere: Instrumentation and Calibration Techniques—Continued

FW2B.3 • 11:30 **Invited**

An Analysis and Correction of Polarization Induced Calibration Errors for the Cross-track Infrared Sounder (CrIS) Sensor, Joe Taylor¹, Henry E. Revercomb¹, David Tobin¹; ¹*Space Science and Engineering Center, Univ. of Wisconsin-Madison, USA*. A model of the potential polarization induced calibration bias is presented for the CrIS instrument, along with details of the model parameter determination, and the predicted impact of the correction on the calibrated radiances.

FW2B.4 • 12:00 **Invited**

A Highly Accurate Correction for Self-Apodization Effects on Fourier Transform Spectrometer Spectra, Jonathan Gero¹, Henry Revercomb¹, David Tobin¹, Robert Knuteson¹, Joe Taylor¹; ¹*1225 W. Dayton St., Univ. of Wisconsin, USA*. A complex Spectral Kernel is defined that expresses the effect of self-apodization induced line shape changes on the ideal Fourier transform integral relationship between spectra and interferograms. Results from the Cross-track Interferometer Sounder (CrIS) are used to demonstrate improved accuracy over the standard processing approach.

Pisces 3

Hyperspectral Imaging and
Sounding of the Environment

HW2C • Radiative Transfer and Hyperspectral Sensing—Continued

HW2C.3 • 11:15

Exploring Information Content of Hyperspectral Remote Sensing Data, Xu Liu¹; ¹*NASA Langley Research Center, USA*. We present a Principal Component-based Radiative Transfer Model (PCRTM) and a retrieval algorithm that can be used to effectively explore the information content of the hyperspectral remote sensing data from infrared to solar spectral regions.

HW2C.4 • 11:30 **Invited**

Unraveling Earth's Climate Change Mysteries from Space: What do we need from our measurements?, Yolanda Shea¹, Daniel Feldman², Peter Pilewskie^{3,4}, Lusheng Liang⁵, Seung-Hee Ham⁵, Seiji Kato¹, Larry Di Girolamo⁶, Bruce Wielicki¹; ¹*NASA Langley Research Center, USA*; ²*Lawrence Berkeley National Lab, USA*; ³*Lab for Atmospheric and Space Physics, USA*; ⁴*Univ. of Colorado, Boulder, USA*; ⁵*Science Systems and Applications, Inc, USA*; ⁶*Univ. of Illinois at Urbana-Champaign, USA*. This talk will review our work on understanding the measurement uncertainty, information content, and retrieval stability needs from Earth-reflected radiation measurements at top-of-atmosphere to obtain an unambiguous assessment of Earth's changing climate.

Pisces 4

Solid-state Lighting

SW2D • Advanced Design, Measurement, and Fabrication—Continued

SW2D.4 • 11:15

Visual clarity and blur acceptability in complex illuminated images, Dorukalp Durmus¹, Wendy Davis¹; ¹*Univ. of Sydney, Australia*. Visual experiments were conducted to quantify blur acceptability in projection systems illuminating complex images. Results show a statistically significant (99 % confidence) increase in blur perception when the circle of confusion increases 3 %.

12:30–13:30 Lunch, Leo Foyer

Energy & the Environment

13:30–15:30

EW3A • Fundamental Measurements for Energy & the Environment

President: Gregory Rieker; Univ. of
Colorado at Boulder, USA

EW3A.1 • 13:30

Ro-vibrational analysis of ammonia at 6.2 μm using high-precision cavity ring-down spectroscopy, Sanchi Maithani¹, Abhijit Maity¹, Mithun Pal¹, Manik Pradhan¹; ¹S.N.Bose National Center for Basic Sciences, India. We developed a cavity ring-down spectroscopy system utilizing a room-temperature, mode-hop-free, continuous wave external-cavity quantum cascade laser for high-resolution and high-sensitive molecular spectroscopic study of ammonia molecule in the spectral region covering 6.0–6.3 μm .

EW3A.2 • 13:45

Accurate Optical Measurements of Stable and Radioactive Carbon Isotopologues of CO₂, Adam J. Fleisher¹, David A. Long¹, Hongming Yi¹, Qingnan Liu¹, Zachary D. Reed¹, Joseph T. Hodges¹; ¹NIIST, USA. We report the cavity ring-down spectroscopy of ¹⁴C, ¹³C and ¹²C isotopologues of CO₂ in the near- and mid-infrared, measurements which yielded accurate transition intensities, mole fraction determinations, and isotope ratios.

EW3A.3 • 14:00

Transition Frequency Measurements of the 2_v₂ R6 Manifold of Methane, Yang Lei^{1,2}, Hong Lin², Xiaojuan Feng², Jintao Zhang^{1,2}; ¹Tsinghua Univ., China; ²National Inst. of Metrology, China. The 2_v₂ R6 manifold of methane is important for remote sensing. The positions of 96 lines in this manifold were determined by both Lamb-dip spectroscopy and linear absorption spectroscopy using a cavity ring-down spectrometer.

EW3A.4 • 14:15

Experimental 1.5–1.6 μm Water Line List at 1950 K, Lucile Rutkowski¹, Alexandra C. Johansson¹, Amir Khodabakhsh¹, Aleksandra A. Kyuberis², Nikolai F. Zobov², Oleg L. Polyansky³, Sergey Yurchenko³, Florian M. Schmidt⁴, Jonathan Tennyson⁵, Aleksandra Foltynowicz¹; ¹Umeå Universitet, Sweden; ²Inst. of Applied Physics, Russian Academy of Sciences, Russia; ³Dept. of Physics and Astronomy, Univ. College London, UK; ⁴Thermochemical Energy Conversion Lab, Umeå Universitet, Sweden. We demonstrate a high-temperature water absorption spectrum measured in a flame using cavity-enhanced frequency comb-based Fourier transform spectroscopy. The retrieved transition intensities and frequencies are assigned using the POKAZATEL line list.

FW3B • Far-IR Observatories: Satellite Measurements

President: Hiroshi Matsuo;
National Astronomical
Observatory Japan, Japan

FW3B.1 • 13:30 **Invited**

The SPICA SAFARI Fourier Transform Spectrometer, David A. Naylor¹, Brad Gom¹, Ian Veenendaal¹, Dennis van Loon², Willem Jellema², Peter Roelfsema², Kees Wafelbakker², Alain Cournoyer³, Frederic Grandmont³; ¹Univ. of Lethbridge, Canada; ²SRON, Netherlands; ³ABB, Canada. The high resolution spectroscopic mode of the SPICA SAFARI instrument will be achieved using a Martin-Puplett interferometer. The key science and technology requirements of the spectrometer will be reviewed and the current instrumental concept presented.

FW3B.2 • 14:00

Simulating the Retrieval of Astronomical Spectra from the SPICA SAFARI Post Dispersed Fourier Transform Spectrometer, Ian Veenendaal¹, David A. Naylor¹, Trevor Fulton¹, Brad Gom¹; ¹Physics and Astronomy, Univ. of Lethbridge, Canada. The SPICA mission will employ ultra sensitive superconducting detectors. In this case the multiplex disadvantage of Fourier transform spectroscopy dictates the use of a post dispersed, diffraction grating detection system. The challenges of reconstructing astronomical spectra will be reviewed.

FW3B.3 • 14:15

The SAFARI far-infrared instrument for the SPICA space telescope, Willem Jellema^{1,2}, Dennis van Loon³, David A. Naylor⁴, Peter Roelfsema²; ¹SRON Netherlands Inst. for Space Research, Netherlands; ²Kapteyn Astronomical Inst., Netherlands; ³SRON Netherlands Inst. for Space Research, Netherlands; ⁴Univ. of Lethbridge, Canada. Utilizing a novel post-dispersed Martin-Puplett FTS scheme and very sensitive TES detector arrays, the SAFARI instrument will provide unprecedented sensitivity and spectroscopic capabilities for astronomy in the far-IR window of 34–230 μm onboard the SPICA space telescope.

Pisces 3

Hyperspectral Imaging and
Sounding of the Environment

13:30–15:30

HW3C • Hyperspectral Imaging of Aerosol and Trace Gases I

President: Ka Lok Chan; DLR
Oberpfaffenhofen Aerospace
Center, Germany

HW3C.1 • 13:30 **Invited**

Fine Boundary Layer Characteristics in China in Association with Aerosol Pollution, Jianping Guo¹; ¹State Key Lab of Severe Weather, Chinese Academy of Meteorological Science, China. The spatio-temporal distribution of boundary layer height (BLH) using radiosonde measurements. Also presented is the features of temperature inversion (TI). BLH and TI are linked to aerosol pollution due to its radiative effect.

HW3C.2 • 14:00 **Invited**

Satellite Remote Sensing of Ozone Profile and Tropospheric Ozone from Nadir-viewing Backscattered Ultraviolet Measurements: OMI and Beyond, Xiong Liu¹, Kelly Chance¹, Juseon Bak¹, Pawan K. Bartia², Zhaonan Cai³, Sachiko Hayashida⁴, Guanyu Huang⁵, Robert J. Spurr⁶, Kang Sun⁷, Kai Yang⁸; ¹Harvard-Smithsonian Center for Astrophysics, USA; ²NASA Goddard Space Flight Center, USA; ³Inst. of Atmospheric Physics, China; ⁴Nara Women's Univ., Japan; ⁵Environmental and Health Sciences, Spelman College, USA; ⁶RT Solutions, Inc., USA; ⁷Univ. at Buffalo, SUNY, USA; ⁸Atmospheric and Oceanic Science, Univ. of Maryland, College Park, USA. We present our OMI ozone profile and tropospheric ozone retrieval algorithm, retrieval characterization, data product and validation, application, and update for the next version. Methods to improve sensitivity to lower tropospheric ozone retrievals are reviewed.

Pisces 4

Optics in Solar Energy

13:30–15:30

OW3D • Solar Concentrators

President: Karin Hinzer; Univ. of
Ottawa, Canada

OW3D.1 • 13:30 **Invited**

Concentrating solar thermal power: challenges and opportunities, and the importance of solar field optical quality, Joe Coventry¹; ¹Australian National Univ., Australia. Concentrating solar thermal power is a promising renewable technology because of its inherent thermal storage, but is being challenged strongly by alternatives such as PV with pumped hydro and batteries. Achieving cost targets (e.g. Sunshot 0.06 USD/kWh) requires new technologies that operate at higher temperature than current state-of-the-art. The strong influence that heliostat optical quality has on solar receiver efficiency at such temperatures is demonstrated.

OW3D.2 • 14:00

Solar concentrating dishes based on elastic and elasto-plastic membranes, Fabian Dähler¹, Gianluca Ambrosetti², Javier Montoya-Zegarra¹, Konrad Schindler¹, Aldo Steinfeld¹; ¹ETH Zurich, Switzerland; ²Synhelion SA, Switzerland. The ability of pressurized membranes to approximate a paraboloid of revolution is investigated. The optical performance of different membrane materials is analyzed computationally and experimentally, showing concentrations of up to 3070 suns.

OW3D.3 • 14:15

Silicone optical elements for cost-effective solar concentration, Sifang Cui¹, Nicholas Lyons¹, Kyung-Jo Kim¹, Robert A. Norwood¹; ¹Univ. of Arizona, USA. Silicone optical elements are demonstrated for a concentrated photovoltaic system. These components show over 96% transmission through most of the solar spectrum and excellent temperature stability. Unique moldability enables cost-effective and complex shape production.

Pisces 1

Optics and Photonics for Energy & the Environment

EW3A • Fundamental Measurements for Energy & the Environment—Continued

EW3A.5 • 14:30

Investigation on the potential gas standard of CO₂ based on cavity ring-down spectroscopy, Hong Lin¹, Hailin Huo¹, Hai Wu¹, Xiaojuan Feng¹, Jintao Zhang¹; ¹National Inst. of Metrology, China. The potential gas standard of CO₂ based on cavity ring-down spectroscopy is discussed. The(300013)-<(00001) R10e and R12e lines are measured to obtain the concentration which has a relative uncertainty of 0.21% and a 0.05% relative difference from the gravimetric method.

EW3A.6 • 14:45

HO₂ Radical Measurements in a Photolysis Reactor using Line-Locked Faraday Rotation Spectroscopy, Chu Teng¹, Chao Yan¹, Hongtao Zhong¹, Aric Rousoo¹, Timothy Chen¹, Jonas Westberg¹, Yiguang Ju¹, Gerard Wysocki¹; ¹Princeton Univ., USA. We report measurements of HO₂ radicals using wavelength modulated Faraday Rotation Spectroscopy in a multi-pass photolysis reactor. The current setup enables line-locked measurements to improve sensitivity and time resolution compared to the line-scanning system.

EW3A.7 • 15:00

Nanofocusing with Silver-Coated Fiber Tip for High-Sensitivity Raman Spectrum Detection, Wending Zhang¹, Min Liu¹, Fanfan Lu¹, Shuhai Liang¹, Ligang Huang², Ting Mei¹; ¹Northwestern Polytechnical Univ., China; ²Chongqing Univ., China. Nanofocusing was achieved at apex of a silver-coated fiber tip internally excited via radially vector beam, and then the tip was adopted to examine Raman spectrum of probe analytes with high activity.

EW3A.8 • 15:15

Quantum Noise Limited Trace Gas Cavity Enhanced Polarization Spectroscopy, Yajie Guan¹, Jiahao Dong¹, Chathura P. Bandutunga¹, Roland Fleddermann¹, Timothy T. Lam¹, Malcolm B. Gray², Jong H. Chow¹; ¹Australian National Univ., Australia; ²National Measurement Inst., Australia. We present a new molecular trace gas absorption spectroscopy architecture and its recent progress. It uses optical cavity polarization states for an ultra-sensitive absorption readout, and achieves shot noise limited performance.

Pisces 2

Fourier Transform Spectroscopy

FW3B • Far-IR Observatories: Satellite Measurements—Continued

FW3B.4 • 14:30

The Herschel/SPIRE Spectral Feature Finder: Updated Feature Catalogues, Jeremy P. Scott¹, Locke D. Spencer¹, Chris Benson¹, David A. Naylor¹, Ivan Valtchanov², Rosalind Hopwood², Natalia Hladczuk²; ¹Univ. of Lethbridge, Canada; ²European Space Astronomy Centre, Herschel Science Centre, Spain. We present an analysis of the updated publicly available Herschel SPIRE spectral Feature Finder data products, focusing primarily on mapping observations, radial velocity estimates, and neutral carbon detection.

FW3B.5 • 14:45 **Invited**

Compact dual-comb systems: From precision spectroscopy to satellite ranging, Ronald Holzwarth¹; ¹Am Klopferspitz 19a, Menlo Systems GmbH, Germany. Abstract not available.

Pisces 3

Hyperspectral Imaging and Sounding of the Environment

HW3C • Hyperspectral Imaging of Aerosol and Trace Gases I—Continued

HW3C.3 • 14:30

Using NO₂ Satellite Observations to Support Satellite-based CO₂ Emission Estimates of Cities and Power Plants, Gerrit Kuhlmann¹, Valentin Clément², Oliver Fuhrer³, Julia Marshall⁴, Grégoire Broquet⁴, Yasjka Meijer⁵, Armin Löscher⁶, Dominik Brunner¹; ¹Empa, Swiss Federal Labs for Materials Science and Technology, Switzerland; ²Center for Climate Systems Modelling, ETH Zürich, Switzerland; ³Federal Office of Meteorology and Climatology, MeteoSwiss, Switzerland; ⁴Laboratoire des Sciences du Climat et de l'environnement, France; ⁵ESA ESTEC, Netherlands; ⁶Max Planck Inst. for Biogeochemistry, Germany. We created synthetic CO₂ and NO₂ satellite observations and compared various methods for estimating anthropogenic CO₂ emissions. The NO₂ observations increased the number of detected CO₂ plumes and reduced mean bias and scatter of the emission estimates making an NO₂ instrument a valuable addition.

HW3C.4 • 14:45

Using a Combination of CE and LP DOAS to Capture Citywide patterns of NO₂ Concentrations, Ying ZHU¹, Mark Wenig¹; ¹LMU, Germany. In our study we developed an algorithm that combines stationary long-path Differential Optical Absorption Spectroscopy (LP DOAS) and cavity-enhanced DOAS (CE DOAS) measurements to produce consistent concentrations maps of Munich and Hong Kong.

HW3C.5 • 15:00

Aerosol Profile Retrieval from a High-altitude MAX-DOAS Measurement using a Parameterized Look-up Table Method, Zhuoru Wang¹, Ka Lok Chan¹, Klaus-Peter Heue¹, Matthias Wiegner²; ¹German Aerospace Center (DLR), Germany; ²Meteorological Inst., Ludwig-Maximilians-Universität (LMU), Germany. We present the first aerosol profile retrieval for high-altitude MAX-DOAS measurement on the Alps (Environmental Research Station Schneefernerhaus (~2650 m a.s.l.), Germany) using the parameterized look-up table method of O₄ absorption.

HW3C.6 • 15:15

Inter-comparison of Hyper Spectral Radiance and GHG data between space-borne FTS and grating spectrometers, Takahiro Kawashima¹, Akihiko Kuze², Kei Shiomi², Hiroshi Suto², Fumie Kataoka¹; ¹RESTEC, Japan; ²Japan Aerospace Exploration Agency, Japan. To demonstrate the effectiveness of monitoring greenhouse gases and air quality from space, we matched-up and inter-compared hyper spectral radiances of solar-reflected light and thermal emission and GHG dataset measured by space-borne FTS and grating spectrometers.

Pisces 4

Optics in Solar Energy

OW3D • Solar Concentrators—Continued

OW3D.4 • 14:30

Photogrammetric Measurement and Alignment of Radiation Modules in a High-Flux Solar Simulator, Johannes J. Pottas¹, Mustafa Habib¹, Wojciech Lipinski¹; ¹Australian National Univ., Australia. A novel method using close-range photogrammetry was developed and evaluated to conduct spatial measurements of the as-built geometry of a high-flux solar simulator. Spatial measurements were used to align radiation modules to a target.

OW3D.5 • 14:45

Application of a Compound Parabolic Concentrator to a Multi-Source High-Flux Solar Simulator, Lifeng Li¹, Bo Wang¹, Johannes J. Pottas¹, Jose Zapata¹, Wojciech Lipinski¹; ¹The Australian National Univ., Australia. This study investigates optical characteristics of compound parabolic concentrators (CPCs) coupled to multi-source high-flux solar simulators using Monte Carlo ray-tracing modelling. Application of a CPC results in increased flux magnitude and uniformity on target surfaces.

OW3D.6 • 15:00

Optical Design of a Heliostat Field for a High-Temperature Receiver-Reactor, Lifeng Li¹, John Pye¹, Wojciech Lipinski¹; ¹The Australian National Univ., Australia. This study investigates the geometrical and optical characteristics of a high concentration ratio heliostat field, with an optional compound parabolic concentrator. The field is designed for application in a high-temperature redox thermochemical energy storage system.

OW3D.7 • 15:15

Design and Fabrication of Thin-Film Silicon-Based Selective Solar Absorbers, Zhiguang Zhou¹, Hao Tian¹, Urcan Guler¹, Vladimir Shalaev¹, Thomas Hymel², Yi Cui², Peter Bermel¹; ¹Purdue Univ., USA; ²Stanford Univ., USA. The efficiency of solar absorbers at capturing heat can be improved dramatically using spectral selectivity. Applying this concept to thin-film silicon increases thermal transfer efficiencies over 60% at 595 °C under moderate solar concentrations.

15:30–16:00 Coffee Break/Exhibits, Leo Foyer

16:00–16:30

JW4A • Postdeadline Presentations I**JW4A.1 • 16:00**

Standoff Detection of RDX, TNT, and HMX Using Femtosecond Filament Induced Breakdown Spectroscopy, Abdul K. Shaik; Venugopal R. Soma; *ACRHEM, India*. Femtosecond filaments were employed for the first time, to the best of our knowledge, to investigate the explosive molecules RDX, TNT and HMX in standoff mode (~6.5m/~8m) using filament induced breakdown spectroscopy (FIBS) technique.

JW4A.2 • 16:15

Multi-octave Spanning, Absolute Frequency, High Resolution THz Dual-Comb Spectrometer Based on Electro-Optic Modulators: First Spectroscopic Measurements, Borja Jerez; Andres Betancur; Pedro Martin-Mateos; Cristina de Dios; Pablo Acedo; *Universidad Carlos III de Madrid, Spain*. First results on a new approach to obtain compact THz dual-comb spectrometers based on Electro-Optic modulators are reported. Two different schemes are evaluated with the objective of obtaining a practical solution for THz spectroscopy.

16:00–16:30

JW4B • Postdeadline Presentations II**JW4B.1 • 16:00**

Satellite Observations of Isoprene from the Thermal Infrared Imaging Spectrometer: from Cross-track Infrared Sounder towards a Next Generation of Global Observing System, Dejian Fu¹; Dylan Millet²; Kelley Wells²; Vivienne Payne¹; Shanshan Yu¹; Thomas Pagano¹; Annmarie Eldering¹; ¹*Jet Propulsion Lab, USA*; ²*University of Minnesota, USA*. We will present retrievals of atmospheric isoprene directly from the CrIS satellite observations, and an instrument concept "Infrared Composition Atmospheric Sounder" - a next-generation global observing system crafted for quantifying atmospheric volatile organic compounds

JW4B.2 • 16:15

Optical Design of Visible and Short-wave Infrared Common-Aperture Imaging Spectrum System, Linlin Pei; *Chinese Academy of Science, China*. In this paper, we design a common-aperture imaging spectrum system. We choose reflective lenses as the main structure, and three refractive lenses to correct axial aberrations. The system is just 260mm in length. The image quality is good.

Call for Papers

SUBMISSION DEADLINE: 5 DECEMBER 2018 / 12:00 EST (17:00 GMT)

CLEO

Laser Science to Photonic Applications

Technical Conference: 5 – 10 May 2019

CLEO:EXPO: 7 – 9 May 2019

Fourier Transform Spectroscopy

16:45–18:45

FW5A • Measurements of the Earth's Atmosphere: Validation and Instrument Advances

President: Erik Kretschmer;
Karlsruher Institut für Technologie, Germany

FW5A.1 • 16:45 **Invited**

CO₂ and CH₄ observations by the thermal infrared band of GOSAT/TANSO-FTS and GOSAT-1/TANSO-FTS-2, Naoko Saitoh¹, Ryoichi Imasu², Kei Shiomi³, Akihiko Kuze³, Masakatsu Nakajima³, Yosuke Niwa⁴, Toshinobu Machida⁴, Yousuke Sawa⁵, Hidekazu Matsueda⁵, Kazuhiro Tsuboi⁵, Aki Tsuruta⁶; ¹Center for Environmental Remote Sensing, Chiba Univ., Japan; ²Atmosphere and Ocean Research Inst., The Univ. of Tokyo, Japan; ³Japan Aerospace Exploration Agency, Japan; ⁴National Inst. for Environmental Studies, Japan; ⁵Meteorological Research Inst., Japan; ⁶Finnish Meteorological Inst., Finland. We have validated CO₂ and CH₄ data retrieved from TIR band of GOSAT/TANSO-FTS based on comparisons with aircraft observations. The accuracy of GHG measurements by TIR bands of GOSAT-2/TANSO-FTS-2 are expected to be much improved.

FW5A.2 • 17:15

Long-term Validation for the Atmospheric Chemistry Experiment Fourier Transform Spectrometer (ACE-FTS), Kaley A. Walker¹, Patrick E. Sheese¹, Jiansheng Zou¹, Chris D. Boone²; ¹Univ. of Toronto, Canada; ²Univ. of Waterloo, Canada. This paper will describe the current validation results for the Atmospheric Chemistry Experiment Fourier Transform Spectrometer (ACE-FTS) with a focus on long-term validation efforts and overall mission status for this instrument.

FW5A.3 • 17:30

Philippines TCCON Project: One-year Measurement Results and Future, Isamu Morino¹, Voltaire A. Velasco^{2,3}, Akihiro Hori¹, Osamu Uchino¹, Hirofumi Oyama¹, Tetsu Sakai⁴, Toshiharu Izumi⁴, Tomohiro Nagai⁴, Gerry Bagtasa⁵, Yukio Yoshida¹, Matthäus Kiel⁶, Beata Bukosa², Nicholas M. Deutscher², Jenny A. Fisher², David W. Griffith²; ¹NIES, Japan; ²Centre for Atmospheric Chemistry, Univ. of Wollongong, Australia; ³Oscar M. Lopez Center for Climate Change Adaptation and Disaster Risk Management Foundation, Philippines; ⁴Meteorological Research Inst., Japan; ⁵Univ. of the Philippines, Philippines; ⁶California Inst. of Technology, USA. We present results of one-year of measurements, some interesting phenomena like CO and CH₄ enhancements, and comparisons with satellite data at Burgos TCCON site in the Philippines, as well as activities involving participation in aircraft observation campaigns such as EMERGE-Asia and NASA CAMP2Ex.

FW5A.4 • 17:45 **Invited**

Greenhouse Gas Column Measurements by Ground-Based FTS, Hirofumi Oyama¹, Kei Shiomi², Nobuhiro Kikuchi², Isamu Morino¹, Akihiro Hori¹, Tsuneo Matsunaga¹; ¹National Inst. for Environmental Studies, Japan; ²Japan Aerospace Exploration Agency, Japan. Ground-based high-resolution Fourier transform spectrometer (FTS) and portable FTS have been used for column measurements of greenhouse gases. We present measurement campaigns for quantifying CO₂ emission from a large point source with two portable FTSs.

Hyperspectral Imaging and Sounding of the Environment

16:45–18:00

HW5B • Hyperspectral Imaging of Aerosol and Trace Gases II

President: Cindy Ong; CSIRO Energy Technology, Australia

HW5B.1 • 16:45

Monitoring Greenhouse Gases Emission from Different Source Sectors with an Angstrom Spectral Resolution Imaging Spectrometer Suite, Akihiko Kuze¹, Hiroshi Suto¹; ¹Japan Aerospace Exploration Agency, Japan. We used an imaging spectrometer suite to measure CO₂, CH₄, and NO₂ with a Å spectral resolution to estimate flux from different source sectors. An airplane campaign over greater Nagoya detected CO₂ and CH₄ enhancement.

HW5B.2 • 17:00 **Invited**

Title to be Determined, Jianguo Liu¹; ¹Anhui Inst Optics & Fine Mech, CAS, China. Abstract not available.

HW5B.3 • 17:30 **Invited**

NO₂ Gridded Monitoring and Emission Flux Estimation by a Novel Mobile Two-axis DOAS Instrument, Pinhua Xie¹; ¹Anhui Inst. of Optics Fine Mechanics, China. The temporal and spatial variation of pollutants and emission sources are important ways to understand regional pollution. To investigate the distribution characteristics and identify sources rapidly, a novel mobile two-axis differential optical absorption spectroscopy (DOAS) instrument has been developed, which receives the scattered light with two elevation angle telescopes (90°, 30°) by setting two shutters to switch the optical paths to spectrometer respectively.

Pisces 4

Optics in Solar Energy

16:45–18:45

OW5C • Multi-Junction Solar Cells

President: Martina Schmid; Universität Duisburg-Essen, Germany

OW5C.1 • 16:45 **Invited**

Advanced optics for silicon based tandem solar cells and modules, Jan C. Goldschmidt¹, Benedikt Bläsi¹, Jan Benick¹, Alexander J. Bett¹, Romain Cariou¹, Ludmila Cojocaru², Frank Feldmann¹, Hubert Hauser¹, Oliver Höhn¹, Ralph Müller¹, Patricia S. Schulze¹, Nico Tucher², Karl Wienands², Kristina Winkler¹, Frank Dimroth¹, Martin Hermle¹, Stefan W. Glunz^{1,2}; ¹Fraunhofer Inst Solare Energie Systeme, Germany; ²Dept. of Sustainable Systems Engineering INATECH, Freiburg Univ., Germany. Our experiments and simulations show how advanced optical elements (front-side texturing, rear-side photonic elements) improve the overall efficiency in III-V and perovskite on silicon multi-junction solar cells leading to record efficiencies and high energy yield.

OW5C.2 • 17:15

Laser-fired-contact Silicon Solar Cells for Perovskite/Silicon Tandem Applications, Xinhang Li^{1,2}, Armin G. Aberle^{1,2}, Fen Lin¹; ¹SERIS, Singapore; ²Dept. of Electrical and Computer Engineering, National Univ. of Singapore, Singapore. In this work, laser-fired-contact (LFC) p-type silicon wafer solar cells are investigated as an option for low-temperature metalized bottom cells in perovskite/silicon tandem applications.

OW5C.3 • 17:30

Energy Yield Modelling of Wide Bandgap Perovskite-Based Tandem Solar Modules, Malte S. Langenhorst¹, Jonathan Lehr², Benjamin Sautter¹, Raphael Schmager¹, Uli Lemmer^{2,1}, Bryce S. Richards^{1,2}, Ulrich W. Paetzold^{1,2}; ¹Inst. of Microstructure Technology, Karlsruhe Inst. of Technology, Germany; ²Light Technology Inst., Karlsruhe Inst. of Technology, Germany. In this work, major loss mechanisms in the complex architecture of wide bandgap perovskite-based tandem solar modules are quantified using detailed energy yield modelling based on realistic meteorological data and rigorous optical and electrical simulations.

OW5C.4 • 17:45

Preparation of flexible GaInP/GaAs/GaInAs Inverted metamorphic (IMM) solar cell based on Electroplating Technology, Junhua Long^{1,2}, Meng Xiao², Xiping Huang², Ming Tan², Zhiwei Xing^{1,2}, Wenxian Yang^{1,2}, Xuefei Li², Yuanyuan Wu², Shulong Lu²; ¹School of Nano Technology and Nano Bionics, Univ. of Science and Technology of China, China; ²Key Lab of Nanodevices and Applications, Suzhou Inst. of Nano-Tech and Nano-Bionics, Chinese Academy of Sciences, China. GaInP/GaAs/GaInAs IMM flexible solar cell has been fabricated by electroplating 20µm thick copper on the p-type contact metal as the supported thin film, which has an efficiency of 33.13% at one sun under the AM1.5G illumination.
